Jump Securities with Auto-Callable Feature due April 10, 2025

All Payments on the Securities Based on the Worst Performing of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The securities offered are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”), fully and unconditionally guaranteed by Morgan Stanley, and have the terms described in the accompanying product supplement, index supplement and prospectus, as supplemented or modified by this document. The securities do not guarantee the repayment of principal and do not provide for the regular payment of interest. The securities will be automatically redeemed if the index closing value of **each** of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index, which we refer to as the underlying indices, on any of the annual determination dates is greater than or equal to its respective then-applicable redemption threshold level, for an early redemption payment that will increase over the term of the securities, as described below. No further payments will be made on the securities once they have been redeemed. At maturity, if the securities have not previously been redeemed and the final index value of each underlying index is **greater than or equal to at most 98% of its respective** initial index value (to be determined on the pricing date), investors will receive a payment at maturity of at least \$1,633 per \$1,000 security (to be determined on the pricing date). If the securities have not previously been redeemed and the final index value of **any underlying index is less than at most 98% of its respective initial** index value (to be determined on the pricing date) but the final index value of **each underlying index is greater than or equal to 75%** of its respective initial index value, which we refer to as the respective downside threshold level, investors will receive a payment at maturity of \$1,000 per \$1,000 security. However, if the securities are not redeemed prior to maturity and the final index value of **any underlying index is less than its respective downside threshold level**, investors will be exposed to the decline in the worst performing underlying index on a 1-to-1 basis, and will receive a payment at maturity that is less than 75% of the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment.** These long-dated securities are for investors who are willing to forego current income and participation in the appreciation of any underlying index in exchange for the possibility of receiving an early redemption payment or payment at maturity greater than the stated principal

amount if each underlying index closes at or above its then-applicable redemption threshold level on an annual determination date or at or above at most 98% of its initial index value (to be determined on the pricing date) on the final determination date. Because all payments on the securities are based on the worst performing of the underlying indices, a decline beyond the respective downside threshold level of any underlying index will result in a significant loss of your investment, even if one or both of the other underlying indices have appreciated or have not declined as much. Investors will not participate in any appreciation of any underlying index. The securities are notes issued as part of MSFL's Series A Global Medium-Term Notes program.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

SUMMARY TERMS

Issuer:	Morgan Stanley Finance LLC
Guarantor:	Morgan Stanley
Underlying indices:	S&P 500 [®] Index (the "SPX Index"), the Dow Jones Industrial Average SM (the "INDU Index") and Russell 2000 [®] Index (the "RTY Index")
Aggregate principal amount:	\$
Stated principal amount:	\$1,000 per security
Issue price:	\$1,000 per security
Pricing date:	April 3, 2019
Original issue date:	April 10, 2019 (5 business days after the pricing date)
Maturity date:	April 10, 2025

If, on any annual determination date, beginning on April 6, 2020, the index closing value of **each** underlying index is **greater than or equal to** its respective then-applicable redemption threshold level, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date.

Early redemption:

The securities will not be redeemed early on any early redemption date if the index closing value of any underlying index is below its respective then-applicable redemption threshold level on the related determination date.

Early redemption payment:

The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of at least 10.55% *per annum*, to be determined on the pricing date) for each annual determination date, as set forth under "Determination Dates and Early Redemption Payments" below.

Edgar Filing: MORGAN STANLEY - Form FWP

No further payments will be made on the securities once they have been redeemed.

1st determination date:

With respect to the SPX 4th determination date:*

Index: 92% of its initial index value

With respect to the SPX Index: At most 98% of its initial index value

With respect to the INDU Index: 92% of its initial index value

With respect to the INDU Index: At most 98% of its initial index value

With respect to the RTY Index: 92% of its initial index value

With respect to the RTY Index: At most 98% of its initial index value

2nd determination date:

With respect to the SPX 5th determination date:*

Index: 92% of its initial index value

With respect to the SPX Index: At most 98% of its initial index value

Redemption threshold levels:

With respect to the INDU Index: 92% of its initial index value

With respect to the INDU Index: At most 98% of its initial index value

With respect to the RTY Index: 92% of its initial index value

With respect to the RTY Index: At most 98% of its initial index value

3rd determination date:

With respect to the SPX *The actual redemption

Index: 92% of its initial index value threshold level

index value percentages with respect to each of the 4th and 5th

With respect to the INDU Index: 92% of its initial index value determination dates will be determined on the pricing date.

With respect to the RTY Index: 92% of its initial index value

Payment at maturity:

If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

- If the final index value of **each underlying index is greater than or equal to at most 98% of its respective** initial index value (to be determined on the pricing date):

At least \$1,633 (to be determined on the pricing date)

· If the final index value of **any underlying index is less than at most 98% of its respective** initial index value (to be determined on the pricing date) but the final index value of **each underlying index is greater than or equal to** its respective downside threshold level:

\$1,000

· If the final index value of **any underlying index is less than** its respective downside threshold level:

\$1,000 × index performance factor of the worst performing underlying index

Under these circumstances, you will lose more than 25%, and possibly all, of your investment.

Terms continued on the following page

Morgan Stanley & Co. LLC (“MS & Co.”), an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See “Supplemental information regarding plan of distribution; conflicts of interest.” Approximately \$979.40 per security, or within

Agent:

Estimated value on the pricing date: \$20.00 of that estimate. See “Investment Summary” beginning on page 3.

Investment Summary

Jump Securities with Auto-Callable Feature

Principal at Risk Securities

The Jump Securities with Auto-Callable Feature due April 10, 2025 All Payments on the Securities Based on the Worst Performing of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index (the “securities”) do not provide for the regular payment of interest. Instead, the securities will be automatically redeemed if the index closing value of **each of** the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index on any annual determination date is greater than or equal to its respective then-applicable redemption threshold level, for an early redemption payment that will increase over the term of the securities, as described below. No further payments will be made on the securities once they have been redeemed. At maturity, if the securities have not previously been redeemed and the final index value of each underlying index is **greater than or equal to at most 98% of its respective** initial index value (to be determined on the pricing date), investors will receive a payment at maturity of at least \$1,633 per \$1,000 security. If the securities have not previously been redeemed and the final index value of **any underlying** index is less than at most 98% of its respective initial index value (to be determined on the pricing date) but the final index value of **each** underlying index is **greater than or equal to** its respective downside threshold level, investors will receive a payment of maturity of \$1,000 per \$1,000 security. However, if the securities are not redeemed prior to maturity and the final index value of **any underlying index is** less than its respective downside threshold level, investors will be exposed to the decline in the worst performing underlying index on a 1-to-1 basis, and will receive a payment at maturity that is less than 75% of the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment.** Investors will not participate in any appreciation in any underlying index.

Maturity: 6 years

Automatic early redemption: If, on any annual determination date, the index closing value of each underlying index is greater than or equal to its respective then-applicable redemption threshold level, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date.

1st determination date:

With respect to the SPX Index: 92% of its initial index value

With respect to the INDU Index: 92% of its initial index value

With respect to the RTY Index: 92% of its initial index value

2nd determination date:

With respect to the SPX Index: 92% of its initial index value

With respect to the INDU Index: 92% of its initial index value

With respect to the RTY Index: 92% of its initial index value

3rd determination date:

With respect to the SPX Index: 92% of its initial index value

Redemption threshold levels: With respect to the INDU Index: 92% of its initial index value

With respect to the RTY Index: 92% of its initial index value

4th determination date*:

With respect to the SPX Index: At most 98% of its initial index value

With respect to the INDU Index: At most 98% of its initial index value

With respect to the RTY Index: At most 98% of its initial index value

5th determination date*:

With respect to the SPX Index: At most 98% of its initial index value

With respect to the INDU Index: At most 98% of its initial index value

With respect to the RTY Index: At most 98% of its initial index value

*The actual redemption threshold level percentages with respect to each of the 4th and 5th determination dates will be determined on the pricing date.

Early redemption payment: The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of at least 10.55% *per annum*, to be determined on the pricing date) for each annual determination date, as follows*:

Morgan Stanley Finance LLC

Jump Securities with Auto-Callable Feature due April 10, 2025

All Payments on the Securities Based on the Worst Performing of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index

Principal at Risk Securities

- 1st determination date: At least \$1,105.50
- 2nd determination date: At least \$1,211.00
- 3rd determination date: At least \$1,316.50
- 4th determination date: At least \$1,422.00
- 5th determination date: At least \$1,527.50

*The actual early redemption payment with respect to each applicable determination date will be determined on the pricing date.

Payment at maturity: No further payments will be made on the securities once they have been redeemed. If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

- If the final index value of **each** underlying index is **greater than or equal to at most 98% of its respective** initial index value (to be determined on the pricing date):

At least \$1,633 (to be determined on the pricing date)

- If the final index value of **any underlying** index is less than at most 98% of its respective initial index value (to be determined on the pricing date) but the final index value of **each** underlying index is **greater than or equal to** its respective downside threshold level:

\$1,000

- If the final index value of **any underlying** index is **less than** its respective downside threshold level:

\$1,000 × index performance factor of the worst performing underlying index

Under these circumstances, investors will lose a significant portion or all of their investment. Accordingly, investors in the securities must be willing to accept the risk of losing their entire

initial investment.

The original issue price of each security is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date will be less than \$1,000. We estimate that the value of each security on the pricing date will be approximately \$979.40, or within \$20.00 of that estimate. Our estimate of the value of the securities as determined on the pricing date will be set forth in the final pricing supplement.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlying indices. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlying indices, instruments based on the underlying indices, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the early redemption payment amounts, the redemption threshold levels and the downside threshold levels, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

Morgan Stanley Finance LLC

Jump Securities with Auto-Callable Feature due April 10, 2025

All Payments on the Securities Based on the Worst Performing of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index

Principal at Risk Securities

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlying indices, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying indices, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities, and, if it once chooses to make a market, may cease doing so at any time.

All Payments on the Securities Based on the Worst Performing of the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index

Principal at Risk Securities

Key Investment Rationale

The securities do not provide for the regular payment of interest. Instead, the securities will be automatically redeemed if the index closing value of **each of** the S&P 500[®] Index, the Dow Jones Industrial AverageSM and the Russell 2000[®] Index on any annual determination date is **greater than or equal** to its respective then-applicable redemption threshold level.

The following scenarios are for illustrative purposes only to demonstrate how an automatic early redemption payment or the payment at maturity (if the securities have not previously been redeemed) are calculated, and do not attempt to demonstrate every situation that may occur. Accordingly, the securities may or may not be redeemed prior to maturity and the payment at maturity may be less than 75% of the stated principal amount of the securities and may be zero.

Scenario 1: The securities are redeemed prior to maturity

When each underlying index closes at or above its respective then-applicable redemption threshold level on any annual determination date, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date. Investors do not participate in any appreciation in any underlying index.

Scenario 2: The securities are not redeemed prior to maturity, and investors receive a fixed positive return at maturity

This scenario assumes that at least one underlying index closes below its respective then-applicable redemption threshold level on each of the annual determination dates. Consequently, the securities are not redeemed prior to maturity. On the final determination date, each underlying index closes at or above at most 98% of its respective initial index value (to be determined on the pricing date). At maturity, investors will receive a cash payment equal to at least \$1,633 per stated principal amount (to be determined on the pricing date). Investors do not participate in any appreciation in any underlying index.

Scenario 3: The securities are not redeemed prior to maturity, and investors receive the return of principal at maturity

This scenario assumes that at least one underlying index closes below its respective then-applicable redemption threshold level on each of the annual determination dates. Consequently, the securities are not redeemed prior to maturity. On the final determination date, at least one underlying index closes below at most 98% of its respective initial index value (to be determined on the pricing date), but the final index value of each underlying index is greater than or equal to its respective downside threshold level. At maturity, investors will receive a cash payment equal to \$1,000 per \$1,000 security.

Scenario 4: The securities are not

This scenario assumes that at least one underlying index closes below its respective then-applicable redemption threshold level on each of the annual determination

redeemed prior to maturity, and investors suffer a substantial loss of principal at maturity dates. Consequently, the securities are not redeemed prior to maturity. On the final determination date, at least one underlying index closes below its respective downside threshold level. At maturity, investors will receive an amount equal to the stated principal amount multiplied by the index performance factor of the worst performing underlying index. Under these circumstances, the payment at maturity will be significantly less than the stated principal amount and could be zero.

All Payments on the Securities Based on the Worst Performing of the S&P 500® Index, the Dow Jones Industrial AverageSM and the Russell 2000® Index

Principal at Risk Securities

Hypothetical Examples

The following hypothetical examples are for illustrative purposes only. Whether the securities are redeemed prior to maturity will be determined by reference to the index closing value of each underlying index on each of the annual determination dates, and the payment at maturity, if any, will be determined by reference to the index closing value of each underlying index on the final determination date. The actual initial index values, redemption threshold levels and downside threshold levels will be determined on the pricing date. Some numbers appearing in the examples below have been rounded for ease of analysis. All payments on the securities are subject to our credit risk. The below examples are based on the following terms:

The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of approximately 10.55% *per annum*) for each annual determination date, as follows:

- 1st determination date: \$1,105.50
- 2nd determination date: \$1,211.00
- 3rd determination date: \$1,316.50
- 4th determination date: \$1,422.00
- 5th determination date: \$1,527.50

Payment at Maturity No further payments will be made on the securities once they have been redeemed. If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

- If the final index value of **each** underlying index is **greater than or equal to 98% of its respective** initial index value (to be determined on the pricing date):

\$1,633 (the actual payment at maturity for this scenario will be determined on the pricing date)

Edgar Filing: MORGAN STANLEY - Form FWP

· If the final index value of **any underlying** index is less than 98% of its respective initial index value (to be determined on the pricing date) but the final index value of **each** underlying index is **greater than or equal to** its respective downside threshold level:

\$1,000

· If the final index value of **any underlying** index is **less than** its respective downside threshold level:

\$1,000 × index performance factor of the worst performing underlying index.

Under these circumstances, you will lose a significant portion or all of your investment.

Stated Principal Amount:

\$1,000

With respect to the SPX Index: 2,500

Hypothetical Initial Index Value:

With respect to the INDU Index: 25,000

With respect to the RTY Index: 1,500

Hypothetical Redemption

1st determination date: 4th determination date*:

Threshold Levels:

With respect to the SPX Index: 2,300, which is 92% of its hypothetical initial index value
 With respect to the SPX Index: 2,450, which is 98% of its hypothetical initial index value

With respect to the INDU Index: 23,000, which is 92% of its hypothetical initial index value

With respect to the INDU Index: 24,500, which is 98% of its hypothetical initial index value

With respect to the RTY Index: 1,470, which is 98% of its hypothetical initial index value

With respect to the RTY Index: 1,380, which is 92% of its hypothetical initial index value
 5th determination date*:

2nd determination date:

With respect to the SPX Index: 2,450, which is 98% of its hypothetical initial index value

With respect to the SPX Index: 2,300, which is 92% of its hypothetical initial index value
 With respect to the INDU Index: 24,500, which is 98% of its hypothetical initial index value

With respect to the INDU Index: 23,000, which is 92% of its hypothetical initial index value

With respect to the RTY Index: 1,470, which is 98% of its hypothetical initial index value

Morgan Stanley Finance LLC

Jump Securities with Auto-Callable Feature due April 10, 2025

All Payments on the Securities Based on the Worst Performing of the S&P 500® Index, the Dow Jones Industrial AverageSM and the Russell 2000® Index

Principal at Risk Securities

Automatic Call:

Example 1 — the securities are redeemed following the second determination date

Date	SPX Index Closing Value	INDU Index Closing Value	RTY Index Closing Value	Payment (per Security)
1 st Determination Date	2,400 (at or above the then-applicable redemption threshold level)	24,000 (at or above the then-applicable redemption threshold level)	1,000 (below the then-applicable redemption threshold level, securities are not redeemed)	--
2 nd Determination Date	2,350 (at or above the then-applicable redemption threshold level)	24,000 (at or above the then-applicable redemption threshold level)	2,450 (at or above the then-applicable redemption threshold level, securities are automatically redeemed)	\$1,211

In this example, on the first determination date, the index closing values of two of the underlying indices are at or above their respective then-applicable redemption threshold levels, but the index closing value of the other underlying index is below its respective then-applicable redemption threshold level. Therefore, the securities are not redeemed. On the second determination date, the index closing value of each underlying index is at or above the respective then-applicable redemption threshold level. Therefore, the securities are automatically redeemed on the second early redemption date. Investors will receive a payment of \$1,211 per security on the related early redemption date. No further payments will be made on the securities once they have been redeemed, and investors do not participate in the appreciation in any of the underlying indices.

How to calculate the payment at maturity:

In the following examples, one or more of the underlying indices close below the respective then-applicable redemption threshold level(s) on each of the annual determination dates, and, consequently, the securities are not automatically redeemed prior to, and remain outstanding until, maturity.

	SPX Index Final Index Value	INDU Index Final Index Value	RTY Index Final Index Value	Payment at Maturity (per Security)
Example 1:	4,000 (at or above 98% of its initial index value)	30,000 (at or above 98% of its initial index value)	2,000 (at or above 98% of its initial index value)	\$1,633
Example 2:	2,000 (below 98% of its initial index value but at or above its downside threshold level)	27,500 (at or above 98% of its initial index value and at or above its downside threshold level)	1,800 (at or above 98% of its initial index value and at or above its downside threshold level)	\$1,000
Example 3:	3,125 (at or above 98% of its initial index value and at or above its downside threshold level)	27,500 (at or above 98% of its initial index value and at or above its downside threshold level)	600 (below its downside threshold level)	$\$1,000 \times (600 / 1,500) = \400
Example 4:	500 (below its downside threshold level)	22,500 (below its downside threshold level)	1,200 (below 98% of its initial index value but at or above its downside threshold level)	$\$1,000 \times (500 / 2,500) = \200
Example 5:	500 (below its downside threshold level)	12,500 (below its downside threshold level)	900 (below its downside threshold level)	$\$1,000 \times (500 / 2,500) = \200

In example 1, the final index value of each underlying index is at or above 98% of its respective initial index value. Therefore, investors receive \$1,633 per security at maturity. Investors do not participate in any appreciation in any underlying index.

Principal at Risk Securities

In example 2, the final index values of two of the underlying indices are at or above 98% of their respective initial index values and at or above their respective downside threshold levels, but the final index value of the other underlying index is below 98% of its initial index value and at or above its downside threshold level. The INDU Index has increased 10% from its initial index value to its final index value, RTY Index has increased 20% from its initial index value to its final index value and the SPX Index has declined 20% from its initial index value to its final index value. Therefore, investors receive \$1,000 per security at maturity. Investors do not participate in any appreciation in any underlying index.

In example 3, the final index values of two of the underlying indices are at or above 98% of their respective initial index value and at or above their downside threshold levels, but the final index value of the other underlying index is below its respective downside threshold level. Therefore, investors are exposed to the downside performance of the worst performing underlying index at maturity. The SPX Index has increased 25% from its initial index value to its final index value, the INDU Index has increased 10% from its initial index value and the RTY Index has declined 60% from its initial index value to its final index value. Therefore, investors receive at maturity an amount equal to the stated principal amount times the index performance factor of the RTY Index, which is the worst performing underlying index in this example.

In example 4, the final index value of one of the underlying indices is below 98% of its initial index value but at or above its downside threshold level, while the final index values of the other underlying indices are below their respective downside threshold levels. Therefore, investors are exposed to the downside performance of the worst performing underlying index at maturity. The INDU Index has declined 10% from its initial index value to its final index value, the RTY Index has declined 20% from its initial index value to its final index value and the SPX Index has declined 80% from its initial index value to its final index value. Therefore, investors receive at maturity an amount equal to the stated principal amount times the index performance factor of the SPX Index, which is the worst performing underlying index in this example.

In example 5, the final index value of each underlying index is below its respective downside threshold level, and investors receive at maturity an amount equal to the stated principal amount *times* the index performance factor of the worst performing underlying index. The SPX Index has declined 80% from its initial index value to its final index value, the INDU Index has declined 50% from its initial index value to its final index value and the RTY Index has declined 40% from its initial index value to its final index value. Therefore, the payment at maturity equals the stated principal amount *times* the index performance factor of the SPX Index, which is the worst performing underlying

index in this example.

If the securities are not redeemed prior to maturity and the final index value of any underlying index is below its respective downside threshold level, you will be exposed to the downside performance of the worst performing underlying index at maturity, and your payment at maturity will be less than 75% of the stated principal amount per security and could be zero.

Principal at Risk Securities

Risk Factors

The following is a list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled “Risk Factors” in the accompanying product supplement, index supplement and prospectus. We also urge you to consult with your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not pay interest or guarantee the return of any principal. The terms of the securities differ from those of ordinary debt securities in that they do not pay interest or guarantee the return of any of the principal amount at maturity. If the securities have not been automatically redeemed prior to maturity and the final index value of **any underlying index** is less than its respective downside threshold level of 75% of its initial index value, you § will be exposed to the decline in the value of the worst performing underlying index, as compared to its initial index value, on a 1-to-1 basis, and you will receive for each security that you hold at maturity an amount equal to the stated principal amount *times* the index performance factor of the worst performing underlying index. In this case, the payment at maturity will be less than 75% of the stated principal amount and could be zero.

The appreciation potential of the securities is limited by the fixed early redemption payment or payment at maturity specified for each determination date. The appreciation potential of the securities is limited to the fixed early redemption payment specified for each determination date if each underlying index closes at or above its § respective then-applicable redemption threshold level on any annual determination date, or to the fixed upside payment at maturity if the securities have not been redeemed and the final index value of each underlying index is at or above at most 98% of its initial index value (to be determined on the pricing date). In all cases, you will not participate in any appreciation of any underlying index, which could be significant.

§ **You are exposed to the price risk of each underlying index.** Your return on the securities is not linked to a basket consisting of each underlying index. Rather, it will be contingent upon the independent performance of each underlying index. Unlike an instrument with a return linked to a basket of underlying assets, in which risk is mitigated and diversified among all the components of the basket, you will be exposed to the risks related to each underlying index. Poor performance by **any underlying index** over the term of the securities may negatively affect your return and will not be offset or mitigated by any positive performance by any of the other underlying indices. To receive an early redemption payment, **each underlying index** must close at or above its respective then-applicable redemption threshold level on the applicable determination date. In addition, if the securities have

not been redeemed and **at least one underlying index** has declined to below its respective downside threshold level as of the final determination date, you will be **fully exposed** to the decline in the worst performing underlying index over the term of the securities on a 1-to-1 basis, even if one or both of the other underlying indices have appreciated or have not declined as much. Under this scenario, the value of any such payment at maturity will be less than 75% of the stated principal amount and could be zero. Accordingly, your investment is subject to the price risk of each underlying index.

The market price will be influenced by many unpredictable factors. Several factors, many of which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market. We expect that generally the level of interest rates available in the market and the value of each underlying index on any day, including in relation to its respective initial index value, redemption threshold levels and downside threshold level, will affect the value of the securities more than any other factors. Other factors that may influence the value of the securities include:

- o the volatility (frequency and magnitude of changes in value) of the underlying indices,

geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component stocks of the underlying indices or securities markets generally and which may affect the value of each underlying index,

- o dividend rates on the securities underlying the underlying indices,

- o the time remaining until the securities mature,

- o interest and yield rates in the market,

Principal at Risk Securities

- o the availability of comparable instruments,
- o the composition of the underlying indices and changes in the constituent stocks of such indices, and
- o any actual or anticipated changes in our credit ratings or credit spreads.

Generally, the longer the time remaining to maturity, the more the market price of the securities will be affected by the other factors described above. Some or all of these factors will influence the price that you will receive if you sell your securities prior to maturity. For example, you may have to sell your securities at a substantial discount from the stated principal amount of \$1,000 per security if the price of any underlying index at the time of sale is near or below its downside threshold level or if market interest rates rise.

You cannot predict the future performance of any underlying index based on its historical performance. The value(s) of one or more of the underlying indices may decrease so that you will receive no return on your investment and receive a payment at maturity that is less than 75% of the stated principal amount. See “S&P 500[®] Index Overview,” “Dow Jones Industrial AverageSM Index Overview” and “Russell 2000[®] Index Overview” below.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay all amounts due on the securities upon an early redemption or at maturity and therefore you are subject to our credit risk. If we default on our obligations under the securities, your investment would be at risk and you could lose some § or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market’s view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

§ **As a finance subsidiary, MSFL has no independent operations and will have no independent assets.** As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such

holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

The securities are linked to the Russell 2000® Index and are subject to risks associated with small-capitalization companies. As the Russell 2000® Index is one of the underlying indices, and the Russell 2000® Index consists of stocks issued by companies with relatively small market capitalization, the securities are linked to the value of small-capitalization companies. These companies often have greater stock price volatility, lower trading volume and less liquidity than large-capitalization companies and therefore the Russell 2000® Index may be more volatile than indices that consist of stocks issued by large-capitalization companies. Stock prices of § small-capitalization companies are also more vulnerable than those of large-capitalization companies to adverse business and economic developments, and the stocks of small-capitalization companies may be thinly traded. In addition, small capitalization companies are typically less well-established and less stable financially than large-capitalization companies and may depend on a small number of key personnel, making them more vulnerable to loss of personnel. Such companies tend to have smaller revenues, less diverse product lines, smaller shares of their product or service markets, fewer financial resources and less competitive strengths than large-capitalization companies and are more susceptible to adverse developments related to their products.

Not equivalent to investing in the underlying indices. Investing in the securities is not equivalent to investing in any underlying index or the component stocks of any underlying index. Investors in the securities will not participate § in any positive performance of any underlying index, and will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute any underlying index.

Principal at Risk Securities

Reinvestment risk. The term of your investment in the securities may be shortened due to the automatic early redemption feature of the securities. If the securities are redeemed prior to maturity, you will receive no further payments on the securities and may be forced to invest in a lower interest rate environment and may not be able to reinvest at comparable terms or returns.

The securities will not be listed on any securities exchange and secondary trading may be limited, and accordingly, you should be willing to hold your securities for the entire 6-year term of the securities. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. MS & Co. may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying indices, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers, and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those § generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your securities in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this document will vary based on many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price will be influenced by many unpredictable factors” above.

§ **Hedging and trading activity by our affiliates could potentially affect the value of the securities.** One or more of our affiliates and/or third-party dealers expect to carry out hedging activities related to the securities (and to other

Morgan Stanley Finance LLC

Principal at Risk Securities

instruments linked to the underlying indices or their component stocks), including trading in the stocks that constitute the underlying indices as well as in other instruments related to the underlying indices. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the final determination date approaches. Some of our affiliates also trade the stocks that constitute the underlying indices and other financial instruments related to the underlying indices on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could potentially increase the initial index value of an underlying index, and, therefore, could increase (i) the respective values at or above which such underlying index must close on the respective determination dates so that the securities are redeemed prior to maturity for the early redemption payment (depending also on the performance of the other underlying indices) and (ii) the downside threshold level for such underlying index, which is the value at or above which such underlying index must close on the final determination date so that you are not exposed to the negative performance of the worst performing underlying index at maturity (depending also on the performance of the other underlying indices). Additionally, such hedging or trading activities during the term of the securities could potentially affect the value of any underlying index on the determination dates, and, accordingly, whether we redeem the securities prior to maturity and the amount of cash you will receive at maturity, if any.

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. will determine the initial index values, the redemption threshold levels, the downside threshold levels, the final index values, whether the securities will be redeemed on any early redemption date and the payment at maturity, if any. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events and the selection of § a successor index or calculation of an index closing value in the event of a market disruption event or discontinuance of an underlying index. These potentially subjective determinations may affect the payout to you upon an early redemption or at maturity, if any. For further information regarding these types of determinations, see “Description of Auto-Callable Securities—Postponement of Determination Dates,” “—Alternate Exchange Calculation in Case of an Event of Default,” “—Discontinuance of Any Underlying Index; Alteration of Method of Calculation” and “—Calculation Agent and Calculations” in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

§ **The U.S. federal income tax consequences of an investment in the securities are uncertain.** Please read the discussion under “Additional Information – Tax considerations” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for auto-callable securities (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the securities. If the

Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment for the securities, the timing and character of income on the securities might differ significantly from the tax treatment described in the Tax Disclosure Sections. For example, under one possible treatment, the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for auto-callable securities, the withholding rules commonly referred to as “FATCA” would apply to the securities if they were recharacterized as debt instruments. However, recently proposed regulations (the preamble to which specifies that taxpayers are permitted to rely on them pending finalization) eliminate the withholding requirement on payments of gross proceeds of a taxable disposition. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a

Principal at Risk Securities

number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

S&P 500® Index Overview

The S&P 500® Index, which is calculated, maintained and published by S&P Dow Jones Indices LLC (“S&P”), consists of stocks of 500 component companies selected to provide a performance benchmark for the U.S. equity markets. The calculation of the S&P 500® Index is based on the relative value of the float adjusted aggregate market capitalization of the 500 component companies as of a particular time as compared to the aggregate average market capitalization of 500 similar companies during the base period of the years 1941 through 1943. For additional information about the S&P 500® Index, see the information set forth under “S&P 500® Index” in the accompanying index supplement.

Russell 2000® Index Overview

The Russell 2000® Index is an index calculated, published and disseminated by FTSE Russell, and measures the composite price performance of stocks of 2,000 companies incorporated in the U.S. and its territories. All 2,000 stocks are traded on a major U.S. exchange and are the 2,000 smallest securities that form the Russell 3000® Index. The Russell 3000® Index is composed of the 3,000 largest U.S. companies as determined by market capitalization and represents approximately 98% of the U.S. equity market. The Russell 2000® Index consists of the smallest 2,000 companies included in the Russell 3000® Index and represents a small portion of the total market capitalization of the Russell 3000® Index. The Russell 2000® Index is designed to track the performance of the small capitalization segment of the U.S. equity market. For additional information about the Russell 2000® Index, see the information set forth under “Russell 2000® Index” in the accompanying index supplement.

Information as of market close on March 26, 2019:

Bloomberg Ticker Symbol:	RTY
Current Index Value:	1,528.166
52 Weeks Ago:	1,543.717
52 Week High (on 8/31/2018):	1,740.753
52 Week Low (on 12/24/2018):	1,266.925

The following graph sets forth the daily index closing values of the RTY Index for the period from January 1, 2014 through March 26, 2019. The related table sets forth the published high and low index closing values, as well as the end-of-quarter index closing values, of the RTY Index for each quarter in the same period. The index closing value of the RTY Index on March 26, 2019 was 1,528.166. We obtained the information in the table and graph below from Bloomberg Financial Markets, without independent verification. The historical index closing values of the RTY Index should not be taken as an indication of future performance, and no assurance can be given as to the value of the RTY Index at any time, including on the determination dates.

Additional Terms of the Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Terms:

If the terms described herein are inconsistent with those described in the accompanying product supplement, index supplement or prospectus, the terms described herein shall control.

With respect to each of the SPX Index and the INDU Index, S&P Dow Jones Indices LLC, or any successor thereof

Underlying

Index publisher:

With respect to the RTY Index, FTSE Russell, or any successor thereof

With respect to each of the SPX Index and the INDU Index, the index closing value on any index business day shall be determined by the calculation agent and shall equal the official closing value of such underlying index, or any successor underlying index (as defined under “Discontinuance of an Underlying Index; Alteration of Method of Calculation” in the accompanying product supplement), published at the regular official weekday close of trading on such index business day by the underlying index publisher for such underlying index. In certain circumstances, the index closing value for the SPX Index or the INDU Index shall be based on the alternate calculation of such underlying index described under “Discontinuance of an Underlying Index; Alteration of Method of Calculation” in the accompanying product supplement.

Index closing value:

With respect to the RTY Index, the index closing value on any index business day shall be determined by the calculation agent and shall equal the closing value of the RTY Index, or any successor underlying index (as defined under “Discontinuance of an Underlying Index; Alteration of Method of Calculation” in the accompanying product supplement), reported by Bloomberg Financial Services, or any successor reporting service the calculation agent may select, on such index business day. In certain circumstances, the index closing value for the RTY Index shall be based on the alternate calculation of the RTY Index described under “Discontinuance of an Underlying Index; Alteration of Method of Calculation” in the accompanying product supplement.

Downside threshold level:

The accompanying product supplement refers to the downside threshold level as the “trigger level.”

Jump securities with auto-callable

The accompanying product supplement refers to these jump securities with auto-callable feature as the “auto-callable securities.”

feature:

Trustee: The Bank of New York Mellon

Calculation agent: MS & Co.

In the event that the early redemption date or the maturity date is postponed due to postponement of the relevant determination date, the issuer shall give notice of such postponement and, once it has been determined, of the date to which the early redemption date or the maturity date, as applicable, has been rescheduled (i) to the holder of the securities by mailing notice of such postponement by first class mail, postage prepaid, to the holder's last address as it shall appear upon the registry books, (ii) to the trustee by facsimile confirmed by mailing such notice to the trustee by first class mail, postage prepaid, at its New York office and (iii) to The Depository Trust Company (the "depository") by telephone or facsimile confirmed by mailing such notice to the depository by first class mail, postage prepaid. Any notice that is mailed to the holder of the securities in the manner herein provided shall be conclusively presumed to have been duly given to such holder, whether or not such holder receives the notice. The issuer shall give such notice as promptly as possible, and in no case later than (i) with respect to notice of postponement of the early redemption date or the maturity date, as applicable, the business day immediately preceding the scheduled early redemption date or maturity date, as applicable, and (ii) with respect to notice of the date to which the early redemption date or the maturity date, as applicable, has been rescheduled, the business day immediately following the relevant determination date as postponed.

Issuer notices to registered security holders, the trustee and the depository:

In the event that the securities are subject to early redemption, the issuer shall, (i) on the business day following the applicable determination date, give notice of the early redemption of the securities and the applicable early redemption payment, including specifying the payment date of the applicable amount due upon the early redemption, (x) to each registered holder of the securities by mailing notice of such early redemption by first class mail, postage prepaid, to such registered holder's last address as it shall appear upon the registry books, (y) to the trustee by facsimile confirmed by mailing such notice to the trustee by first class mail, postage prepaid, at its New York office and (z) to the depository by telephone or facsimile confirmed by mailing such notice to the depository by first class mail, postage prepaid and (ii) on or prior to the early redemption date, deliver the aggregate cash amount due with respect to the securities to the trustee for delivery to the depository, as holder of the securities. Any notice that is mailed to a registered holder of the securities in the manner herein provided shall be conclusively presumed to have been duly given to such holder, whether or not such registered holder receives the notice. This notice shall be given by the issuer or, at the issuer's request, by the trustee in the name and at the expense of the issuer, with any such request to be accompanied by a copy of the

Additional Information About the Securities

Additional Information:

Minimum ticketing size: \$1,000 / 1 security

Tax considerations:

Although there is uncertainty regarding the U.S. federal income tax consequences of an investment in the securities due to the lack of governing authority, in the opinion of our counsel, Davis Polk & Wardwell LLP, under current law, and based on current market conditions, each security should be treated as a single financial contract that is an “open transaction” for U.S. federal income tax purposes. However, because our counsel’s opinion is based in part on market conditions as of the date of this document, it is subject to confirmation on the pricing date.

Assuming this treatment of the securities is respected and subject to the discussion in “United States Federal Taxation” in the accompanying product supplement for auto-callable securities, the following U.S. federal income tax consequences should result based on current law:

§ A U.S. Holder should not be required to recognize taxable income over the term of the securities prior to settlement, other than pursuant to a sale or exchange.

§ Upon sale, exchange or settlement of the securities, a U.S. Holder should recognize gain or loss equal to the difference between the amount realized and the U.S. Holder’s tax basis in the securities. Such gain or loss should be long-term capital gain or loss if the investor has held the securities for more than one year, and short-term capital gain or loss otherwise.

In 2007, the U.S. Treasury Department and the Internal Revenue Service (the “IRS”) released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect.

As discussed in the accompanying product supplement for auto-callable securities, Section 871(m) of the Internal Revenue Code of 1986, as amended, and Treasury regulations promulgated thereunder (“Section 871(m)”) generally impose a 30% (or a lower applicable treaty rate) withholding tax on dividend equivalents paid or deemed paid to Non-U.S. Holders with respect to certain financial instruments linked to U.S. equities or indices that include U.S. equities (each, an “Underlying Security”). Subject to certain exceptions, Section 871(m) generally applies to securities that substantially replicate the economic performance of one or more Underlying Securities, as determined based on tests set forth in the applicable Treasury regulations (a “Specified Security”). However, pursuant to an IRS notice, Section 871(m) will not apply to securities issued before January 1, 2021 that do not have a delta of one with respect

to any Underlying Security. Based on the terms of the securities and current market conditions, we expect that the securities will not have a delta of one with respect to any Underlying Security on the pricing date. However, we will provide an updated determination in the pricing supplement. Assuming that the securities do not have a delta of one with respect to any Underlying Security, our counsel is of the opinion that the securities should not be Specified Securities and, therefore, should not be subject to Section 871(m).

Our determination is not binding on the IRS, and the IRS may disagree with this determination. Section 871(m) is complex and its application may depend on your particular circumstances, including whether you enter into other transactions with respect to an Underlying Security. If withholding is required, we will not be required to pay any additional amounts with respect to the amounts so withheld. You should consult your tax adviser regarding the potential application of Section 871(m) to the securities.

Both U.S. and non-U.S. investors considering an investment in the securities should read the discussion under “Risk Factors” in this document and the discussion under “United States
