**Suite 210, 1167 Kensington Crescent NW  
Calgary, Alberta, Canada T2N 1X7**

---

*(Address of principal executive offices)*

Indicate by check mark whether the registrant files or will file annual reports under cover Form 20-F or Form 40-F.

Form 20-F

Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

**Note:** Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

**Note:** Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's home country), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

Indicate by check mark whether by furnishing the information contained in this Form, the registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes

No

If Yes is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82 - \_\_\_\_\_

## **First Quarter Report**

*For the quarter ended March 31, 2008*

### **Letter to Shareholders**

The year 2008 is shaping up to be an exciting and rewarding time for Oncolytics as we begin to see early results from our Phase II and combination REOLYSIN<sup>®</sup> and chemotherapy clinical trials.

### **Significant Clinical advances**

At the end of January, we announced that we had met the initial criteria to proceed to full enrolment in our U.S. Phase II sarcoma trial. According to the trial protocol, we had to demonstrate that at least one patient in the first 38 patients treated experienced a complete or partial response, or stable disease for greater than six months. The third patient treated in the trial was demonstrated to have stable disease by RECIST criteria for more than six months as measured by CT and PET scans. In addition, the PET scan indicated that any residual tumour mass was metabolically inactive. The trial continues to enroll patients at four sites in the U.S.

Just subsequent to the quarter end, we also announced positive interim results from our U.K. combination REOLYSIN<sup>®</sup> and paclitaxel/carboplatin trial, particularly in patients with head and neck cancer. In the first cohort of patients treated, a patient with head and neck cancer received 8 cycles of treatment and achieved a clinical complete response. In the second cohort, two patients with head and neck cancers with widespread disseminated disease achieved significant partial responses after six cycles of treatment. Two of the three patients, including the patient with the clinical complete response, had previously received cisplatin/5-FU treatment and all three had previously received radiotherapy. Considering the prognosis for recurrent patients, we believe these early results to be very encouraging.

Also in January, we announced that the U.S. National Cancer Institute (NCI) filed a protocol with the U.S. Food and Drug Administration (FDA) for a Phase I/II clinical trial for patients with metastatic ovarian, peritoneal or fallopian tube cancers using concurrent systemic and intraperitoneal administration of REOLYSIN<sup>®</sup>. The trial, which is being carried out at the Ohio State University Comprehensive Cancer Center, began recruiting patients in April.

The NCI also began recruiting patients in April for its Phase II clinical trial for patients with metastatic melanoma using systemic administration of REOLYSIN<sup>®</sup>. The trial is being carried out by the Mayo Phase 2 Consortium.

The investigators for our first U.K. Phase I systemic administration trial published the results of their work characterizing immune system responses to REOLYSIN<sup>®</sup> in the March 6 issue of *Gene Therapy*. This important work further defines the relationship between viral therapy and human immune responses. The results of the research suggest that reovirus may stimulate the immune system to mount a dynamic immune response to the presence of virus, increasing the potential to significantly enhance the efficacy of oncolytic virotherapy. With our collaborators, we continue to investigate the interaction between the immune system and the reovirus both in the lab and the clinic.

### **Preclinical Support Expands**

Our collaborators continue to report results of preclinical studies that fully support the development of our human clinical program. In the first quarter, two of our collaborators published results of preclinical studies in *Clinical Cancer Research*. The first paper, published in January, demonstrated that using cyclophosphamide prior to systemic reovirus administration resulted in increased survival with only mild toxicities. The second paper, published in February, demonstrated that combining reovirus and radiotherapy significantly increased cancer cell killing both *in vitro* and *in vivo*, particularly in cell lines with moderate susceptibility to reovirus alone.

At the American Association for Cancer Research (AACR) meeting in San Diego in April, two of our collaborators presented the results of research using reovirus as a purging agent during autologous blood

---

stem transplants, and also as a treatment in combination with radiation for childhood sarcomas. This work highlights future potential opportunities for REOLYSIN<sup>®</sup> as a cancer therapy.

**Intellectual Property Continuing to Grow**

We continue to add to our intellectual property as we learn more about oncolytic viruses and their ability to treat many types of human cancers. In the quarter, we secured an additional two Canadian patents covering the use of reovirus for cancers that have inactivated or deleted PKR, and the use of other modified oncolytic viruses to purge contaminating cancer cells from stem cell preparations used for transplants. We also secured a U.S. patent that covers the use of adenoviruses modified to selectively replicate in cancer cells that have an activated Ras pathway, a common mutation in cancer cells.

**Looking Ahead**

We are currently enrolling or recruiting patients in a total of nine clinical studies, four exploring the use of REOLYSIN<sup>®</sup> as a monotherapy, and five exploring the use of REOLYSIN<sup>®</sup> in combination with a variety of chemotherapies and radiotherapy. In 2008, we expect to report interim or final results on a number of our ongoing clinical trials. We are rapidly moving toward the point where we can expect to make pivotal clinical trial decisions about REOLYSIN<sup>®</sup>. It is an exciting time for Oncolytics and our shareholders.

On behalf of the Board of Directors and the staff at Oncolytics, thank you for your continued support and encouragement.

Brad Thompson, PhD  
President and CEO  
April 30, 2008

April 30, 2008

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This discussion and analysis should be read in conjunction with the unaudited consolidated financial statements of Oncolytics Biotech Inc. as at and for the three months ended March 31, 2008 and 2007, and should also be read in conjunction with the audited financial statements and Management's Discussion and Analysis of Financial Condition and Results of Operations ( MD&A ) contained in our annual report for the year ended December 31, 2007. The financial statements have been prepared in accordance with Canadian generally accepted accounting principles ( GAAP ).

### FORWARD-LOOKING STATEMENTS

The following discussion contains forward-looking statements, within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements, including our belief as to the potential of REOLYSIN® as a cancer therapeutic and our expectations as to the success of our research and development and manufacturing programs in 2008 and beyond, future financial position, business strategy and plans for future operations, and statements that are not historical facts, involve known and unknown risks and uncertainties, which could cause our actual results to differ materially from those in the forward-looking statements. Such risks and uncertainties include, among others, the need for and availability of funds and resources to pursue research and development projects, the efficacy of REOLYSIN® as a cancer treatment, the success and timely completion of clinical studies and trials, our ability to successfully commercialize REOLYSIN®, uncertainties related to the research, development and manufacturing of pharmaceuticals, uncertainties related to competition, changes in technology, the regulatory process and general changes to the economic environment. Investors should consult our quarterly and annual filings with the Canadian and U.S. securities commissions for additional information on risks and uncertainties relating to the forward-looking statements. Forward-looking statements are based on assumptions, projections, estimates and expectations of management at the time such forward-looking statements are made, and such assumptions, projections, estimates and/or expectations could change or prove to be incorrect or inaccurate. Investors are cautioned against placing undue reliance on forward-looking statements. We do not undertake to update these forward-looking statements.

### OVERVIEW

#### *Oncolytics Biotech Inc. is a Development Stage Company*

Since our inception in April of 1998, Oncolytics Biotech Inc. has been a development stage company and we have focused our research and development efforts on the development of REOLYSIN®, our potential cancer therapeutic. We have not been profitable since our inception and expect to continue to incur substantial losses as we continue research and development efforts. We do not expect to generate significant revenues until, if and when, our cancer product becomes commercially viable.

#### *General Risk Factors*

Prospects for biotechnology companies in the research and development stage should generally be regarded as speculative. It is not possible to predict, based upon studies in animals, or early studies in humans, whether a new therapeutic will ultimately prove to be safe and effective in humans, or whether necessary and sufficient data can be developed through the clinical trial process to support a successful product application and approval.

If a product is approved for sale, product manufacturing at a commercial scale and significant sales to end users at a commercially reasonable price may not be successful. There can be no assurance that we will generate adequate funds to continue development, or will ever achieve significant revenues or profitable

operations. Many factors (e.g. competition, patent protection, appropriate regulatory approvals) can influence the revenue and product profitability potential.

In developing a pharmaceutical product, we rely upon our employees, contractors, consultants and collaborators and other third party relationships, including the ability to obtain appropriate product liability insurance. There can be no assurance that these reliances and relationships will continue as required.

In addition to developmental and operational considerations, market prices for securities of biotechnology companies generally are volatile, and may or may not move in a manner consistent with the progress being made by Oncolytics.

***REOLYSIN® Development Update for the First Quarter of 2008***

We continue to develop our lead product REOLYSIN® as a potential cancer therapy. Our goal each year is to advance REOLYSIN® through the various steps and stages of development required for pharmaceutical products. In order to achieve this goal, we actively manage the development of our clinical trial program, our pre-clinical and collaborative programs, our manufacturing process and supply, and our intellectual property.

**Clinical Trial Program**

During the first quarter of 2008 our clinical trial program expanded to nine clinical trials of which seven are being conducted by us and two are being sponsored by the U.S. National Cancer Institute ( NCI ).

***Clinical Trials Actively Enrolling***

During the first quarter of 2008, we continued to enroll patients in our Phase II combination REOLYSIN®/radiation and our three Phase I/II chemotherapeutic co-therapy clinical trials in the U.K. In the U.S., we continued to enroll patients in our Phase II sarcoma and in our Phase I/II recurrent malignant glioma clinical trials.

***Clinical Trials Expanded Enrollment***

During the first quarter of 2008, we announced that we had met the initial criteria to proceed to full enrolment in our U.S. Phase II trial to evaluate the intravenous administration of REOLYSIN® in patients with various sarcomas that have metastasized to the lung.

According to the trial protocol, to proceed to full enrolment of 52 patients, we had to demonstrate that at least one patient in the first 38 patients treated experienced a complete or partial response, or stable disease for greater than six months. The third patient treated in the study was demonstrated to have stable disease by RECIST criteria for more than six months as measured by CT scan. A PET scan taken at the same time showed that any residual mass was metabolically inert.

This trial is a Phase II, open-label, single agent study whose primary objective is to measure tumour responses and duration of response, and to describe any evidence of antitumour activity of intravenous, multiple dose REOLYSIN® in patients with bone and soft tissue sarcomas metastatic to the lung. REOLYSIN® is delivered intravenously to patients at a dose of  $3 \times 10^{10}$  TCID<sub>50</sub> for five consecutive days. Patients may receive additional five-day cycles of therapy every four weeks for a maximum of eight cycles. Up to 52 patients will be enrolled in the study.

Eligible patients must have a bone or soft tissue sarcoma metastatic to the lung deemed by their physician to be unresponsive to or untreatable by standard therapies. These include patients with osteosarcoma, Ewing sarcoma family tumours, malignant fibrous histiocytoma, synovial sarcoma, fibrosarcoma and leiomyosarcoma.

---

***Clinical Trials Recently Filed Application***

In the first quarter of 2008, the NCI filed a protocol with the U.S. Food and Drug Administration for a Phase I/II clinical trial for patients with metastatic ovarian, peritoneal or fallopian tube cancers using concurrent systemic and intraperitoneal administration of REOLYSIN®. The trial, which is being carried out at The Ohio State University Comprehensive Cancer Center, is expected to enroll up to 70 patients with metastatic ovarian, peritoneal or fallopian tube cancers. These cancer indications were selected after comprehensive preclinical studies carried out by the NCI indicated the reovirus can kill ovarian cancer cells.

***Pre-Clinical Trial and Collaborative Program***

In the first quarter of 2008, we reported that a research group led by Dr. Richard Vile of the Mayo Clinic College of Medicine in Rochester, Minnesota, published the results of its work testing the antitumor efficacy and safety of various combinations of reovirus and cyclophosphamide *in vivo*. The paper, entitled "Cyclophosphamide Facilitates Antitumor Efficacy against Subcutaneous Tumors following Intravenous Delivery of Reovirus" appeared online in the January 1, 2008 issue of *Clinical Cancer Research*.

The purpose of the research study was to investigate whether it was possible to use cyclophosphamide, an immune modulator, to enhance the delivery and replication of the reovirus when delivered intravenously. After testing various doses and dosing regimens of reovirus and cyclophosphamide in mice, a metronomic dosing regimen was developed that resulted in increased survival, high levels of reovirus recovered from regressing tumors, levels of neutralizing antibodies that were protective, and only very mild toxicities. The data support investigation in human clinical trials of the use of cyclophosphamide prior to systemic reovirus administration to modulate, but not ablate, the immune system.

We also reported that Dr. Kevin Harrington and his research group at The Institute of Cancer Research, London, U.K. published the results of their work testing combination treatment schedules of reovirus and radiation in human and murine tumour cells *in vitro* and *in vivo*. The paper, entitled "Enhanced In vitro and In vivo Cytotoxicity of Combined Reovirus and Radiotherapy" appeared online in the February 1, 2008 issue of *Clinical Cancer Research*.

The effect of different schedules of reovirus and radiotherapy on viral replication and cytotoxicity was tested *in vitro* and the combination was assessed in three tumour models *in vivo*. The results demonstrated that combining reovirus and radiotherapy significantly increased cancer cell killing both *in vitro* and *in vivo*, particularly in cell lines with moderate susceptibility to reovirus alone.

As well, in the first quarter of 2008, we reported that Dr. Kevin Harrington and his research group at The Institute of Cancer Research, London, U.K. published the results of their work characterizing immune system responses to administration of intravenous REOLYSIN® in a Phase I clinical trial. The paper, entitled "Characterization of the Adaptive and Innate Immune Response to Intravenous Oncolytic Reovirus (Dearing Type 3) during a Phase I Clinical Trial" appeared online in the March 6, 2008 issue of *Gene Therapy*.

The investigators conducted a detailed analysis of the immune effects of intravenous viral therapy by collecting and analyzing immune response to the presence of the virus. The results suggest that reovirus may stimulate the immune system to mount a dynamic immune response to the presence of virus, increasing the potential to significantly enhance the efficacy of oncolytic virotherapy. About a third of those patients also showed increases in NK (natural killer) cells following therapy. The data support the development of interventions aimed at blunting the patient's immune response, although preclinical data also suggest that maintaining a baseline level is necessary to restrict systemic spread and toxicity of the virus.

---

### **Manufacturing and Process Development**

In the first quarter of 2008, after completing the technology transfer of our 40-litre production process to our manufacturer in the U.S., we commenced production at the 40-litre scale under cGMP conditions for use in our clinical trials. Our process development activity continued to focus on scale up from 40-litre to 100-litre production runs.

### **Intellectual Property**

During the first quarter of 2008, one U.S. and two Canadian patents were issued. At the end of the first quarter of 2008, we had been issued over 170 patents including 26 U.S. and eight Canadian patents as well as issuances in other jurisdictions. We also have over 180 patent applications filed in the U.S., Canada and other jurisdictions.

### **Financial Impact**

We estimated at the beginning of 2008 that our average monthly cash usage would be approximately \$1,660,000 for 2008. Our cash usage for the first quarter of 2008 was \$2,991,234 from operating activities and \$259,969 for the purchases of intellectual property and capital assets which is lower than our expected monthly average but is in line with our expectations for 2008. Our net loss for the first quarter of 2007 was \$3,324,241.

### **Cash Resources**

We exited the first quarter of 2008 with cash resources totaling \$21,962,626 (see *Liquidity and Capital Resources* ).

### ***Expected REOLYSIN® Development for the Remainder of 2008***

We plan to continue to enroll patients in our clinical trials throughout 2008 and still expect to complete enrollment in our co-therapy trials in the U.K. and our sarcoma study in the U.S. We believe that the results from these trials will allow us to broaden our Phase II clinical trial program and choose a pivotal trial path. As well, we believe that the NCI will commence enrollment in its two sponsored clinical trials.

We expect to produce REOLYSIN® for our clinical trial program throughout 2008. We believe we will complete our 100-litre scale up studies and will continue our examination of a lyophilization (freeze drying) process for REOLYSIN®.

We continue to estimate, based on our expected activity for 2008 that our average monthly cash usage will be \$1,660,000 per month (see *Liquidity and Capital Resources* ).

### **Recent 2008 Progress**

#### *Clinical Trials Positive Interim Results*

In April, we announced positive interim results and completion of the dose escalation portion of our U.K. combination REOLYSIN® and carboplatin/paclitaxel trial. Four of the first eight patients treated in the study to date have a diagnosis of carcinoma of the head and neck. All three head and neck patients evaluated to date have had excellent clinical and radiological responses without appreciable toxicity. Preliminary assessment after recruitment of the first two cohorts has suggested that patients with head and neck carcinomas represent a group of patients for whom the combination of carboplatin/paclitaxel and REOLYSIN® may prove effective.

In the first cohort, the patient with head and neck cancer received 8 cycles of treatment (the maximum allowed) and achieved a clinical complete response. In the second cohort, the two patients with head and

---

neck cancers with widespread disseminated disease have each received seven cycles of treatment to date and both have achieved significant partial responses. Two of the three patients, including the patient with the clinical complete response, had previously received cisplatin/5-FU treatment and all three had previously received radiotherapy.

This clinical trial has two components. The first is an open-label, dose-escalating, non-randomized study of REOLYSIN<sup>®</sup> given intravenously with paclitaxel and carboplatin every three weeks. Standard dosages of paclitaxel and carboplatin were delivered to patients with escalating dosages of REOLYSIN<sup>®</sup> intravenously. The second component of the trial includes the enrolment of a further 12 patients at the maximum dosage of REOLYSIN<sup>®</sup> in combination with a standard dosage of paclitaxel and carboplatin.

Eligible patients include those who have been diagnosed with advanced or metastatic solid tumours such as head and neck, melanoma, lung and ovarian cancers that are refractory (have not responded) to standard therapy or for which no curative standard therapy exists. The primary objective of the trial is to determine the Maximum Tolerated Dose (MTD), Dose-Limiting Toxicity (DLT), recommended dose and dosing schedule and safety profile of REOLYSIN<sup>®</sup> when administered in combination with paclitaxel and carboplatin. Secondary objectives include the evaluation of immune response to the drug combination, the body's response to the drug combination compared to chemotherapy alone and any evidence of anti-tumour activity.

#### *Collaborations Results*

On April 15, 2008, we announced that a poster presentation by Dr. Anders Kolb of the Nemours Center for Childhood Cancer Research entitled "Radiation in Combination with Reovirus for Pediatric Sarcomas" was presented at the American Association for Cancer Research (AACR) Annual Meeting. The poster covers preclinical work using reovirus in combination with radiation in mice implanted with pediatric rhabdomyosarcoma and Ewing's sarcoma tumours. The results demonstrated that the combination of reovirus and radiation significantly enhanced efficacy compared to either treatment alone in terms of tumour regression and event-free survival.

On April 15, 2008, we announced that an oral presentation by Dr. Chandini Thirukkumaran of the Tom Baker Cancer Centre, Calgary, entitled "Targeting Multiple Myeloma with Oncolytic Viral Therapy" was presented at the AACR Annual Meeting. The presentation covered preclinical work using reovirus as a purging agent during autologous (harvested from the patient themselves) hematopoietic stem cell transplants for multiple myeloma. The results demonstrated that up to 70% of multiple myeloma cell lines tested showed reovirus sensitivity and reovirus induced cancer cell death mediated through apoptosis.

On April 16, 2008, we announced that Prof. Alan Melcher and his research group at St. James's University Hospital in Leeds, U.K. published the results of their work in the April 10 online issue of *Gene Therapy*. The paper is entitled

"Inflammatory Tumour Cell Killing by Oncolytic Reovirus for the Treatment of Melanoma." The investigators showed that reovirus effectively kills and replicates in both human melanoma cell lines and freshly resected tumour. They demonstrated that reovirus melanoma killing is more potent than, and distinct from, chemotherapy or radiotherapy-induced cell death. They concluded that reovirus is suitable for clinical testing in melanoma.

---

**RESULTS OF OPERATIONS**

Net loss for the three month period ending March 31, 2008 was \$3,324,241 compared to \$4,113,231 for the three month period ending March 31, 2007.

**Research and Development Expenses ( R&D )**

	<b>2008</b>	<b>2007</b>
	\$	\$
Manufacturing and related process development expenses	<b>503,094</b>	1,838,193
Clinical trial expenses	<b>1,042,791</b>	721,617
Pre-clinical trial expenses and collaborations		106,281
Other R&D expenses	<b>579,926</b>	552,146
Research and development expenses	<b>2,125,811</b>	3,218,237

For the first quarter of 2008, R&D decreased to \$2,125,811 compared to \$3,218,237 for the first quarter of 2007. The decrease in R&D was due to the following:

**Manufacturing & Related Process Development ( M&P )**

	<b>2008</b>	<b>2007</b>
	\$	\$
Product manufacturing expenses	<b>467,328</b>	1,748,417
Process development expenses	<b>35,766</b>	89,776
Manufacturing and related process development expenses	<b>503,094</b>	1,838,193

Our M&P expenses for the first quarter of 2008 decreased to \$503,094 compared to \$1,838,193 for the first quarter of 2007.

In the first quarter of 2008, our production activity decreased compared to the first quarter of 2007. During the first quarter of 2008, we entered into a contract to manufacture REOLYSIN® at the 40-litre scale. We commenced production under this contract towards the end of the first quarter of 2008. In the first quarter of 2007, along with a number of manufacturing runs at the 20-litre scale, we also incurred vial filling activity for the production runs that were completed at the end of 2006.

Our process development expenses for the first quarter of 2008 were \$35,766 compared to \$89,776 for the first quarter of 2007. In the first quarter of 2008, our process development focus continues to be on the scale up to 100-litre production runs. In the first quarter of 2007, our process development focus was on our earlier 40-litre scale up studies.

We still expect that our M&P expenses for 2008 will increase compared to 2007. We have initiated our 40-litre production runs which will continue throughout 2008. As well, we still expect to finalize our 100-litre scale up studies and continue the examination of a lyophilization process for REOLYSIN® in 2008. Once our 100-litre process development studies are complete, we expect to transfer our 100-litre manufacturing process to our cGMP manufacturers.

**Clinical Trial Program**

	<b>2008</b>	<b>2007</b>
	<b>\$</b>	<b>\$</b>
Direct clinical trial expenses	<b>994,646</b>	683,107
Other clinical trial expenses	<b>48,145</b>	38,510
Clinical trial expenses	<b>1,042,791</b>	721,617

During the first quarter of 2008, our direct clinical trial expenses increased to \$994,646 compared to \$683,107 for the first quarter of 2007. In the first quarter of 2008, we incurred direct patient costs in our six enrolling clinical trials compared to only three actively enrolling clinical trials in the first quarter of 2007.

We still expect our clinical trial expenses to increase in 2008 compared to 2007. The increase in these expenses is expected to arise from continued enrollment and continued re-treatments in our existing clinical trials.

**Pre-Clinical Trial Expenses and Research Collaborations**

	<b>2008</b>	<b>2007</b>
	<b>\$</b>	<b>\$</b>
Research collaboration expenses		106,281
Pre-clinical trial expenses		
Pre-clinical trial expenses and research collaborations		106,281

During the first quarter of 2008, our research collaboration activity focused on renewing specific collaborations, but no costs were incurred compared to \$106,281 for the first quarter of 2007. Our research collaboration activity continues to focus on the interaction of the immune system and the reovirus and the use of the reovirus as a co-therapy with existing chemotherapeutics and radiation.

We still expect that our pre-clinical trial expenses and research collaborations in 2008 will remain consistent with 2007.

**Other Research and Development Expenses**

	<b>2008</b>	<b>2007</b>
	<b>\$</b>	<b>\$</b>
R&D consulting fees	<b>27,408</b>	91,776
R&D salaries and benefits	<b>478,118</b>	372,389
Other R&D expenses	<b>74,400</b>	87,981
Other research and development expenses	<b>579,926</b>	552,146

During the first quarter of 2008, our R&D consulting fees were \$27,408 compared to \$91,776 for the first quarter of 2007. In the first quarter of 2007, we incurred consulting activity associated with our co-therapy clinical trial applications that was not incurred in the first quarter of 2008.

Our R&D salaries and benefits costs were \$478,118 for the first quarter of 2008 compared to \$372,389 for the first quarter of 2007. The increase is a result of increases in salary levels for 2008 compared to 2007.

We still expect that our Other R&D expenses will remain consistent with 2007.

**Operating Expenses**

	<b>2008</b>	<b>2007</b>
	<b>\$</b>	<b>\$</b>
Public company related expenses	<b>759,970</b>	581,876
Office expenses	<b>324,284</b>	324,839
Operating expenses	<b>1,084,254</b>	906,715

During the first quarter of 2008, our public company related expenses were \$759,970 compared to \$581,876 for the first quarter of 2007. In the first quarter of 2008, we incurred an increase in professional fees associated with the expansion of our corporate structure, an increase in our investor relations activity, and an increase in compensation costs paid to our board of directors compared to the first quarter of 2007.

During the first quarter of 2008, our office expenses were \$324,284 compared to \$324,839 for the first quarter of 2007. Our office expense activity has remained consistent in the first quarter of 2008 compared to the first quarter of 2007.

**Commitments**

As at March 31, 2008, we are committed to payments totaling \$2,497,000 during the remainder of 2008 for activities related to clinical trial activity, manufacturing and collaborations. All of these committed payments are considered to be part of our normal course of business.

**SUMMARY OF QUARTERLY RESULTS**

The following unaudited quarterly information is presented in thousands of dollars except for per share amounts:

	<b>2008</b>		<b>2007</b>		<b>2006</b>			
	<b>March</b>	<b>Dec.</b>	<b>Sept.</b>	<b>June</b>	<b>March</b>	<b>Dec.</b>	<b>Sept.</b>	<b>June</b>
<b>Revenue</b>								
<b>Interest income</b>	180	265	319	359	268	286	320	335
<b>Net loss<sup>(3)</sup></b>	3,324	4,085	3,764	3,680	4,113	4,890	3,425	2,988

(1) Subsequent to the acquisition of Oncolytics Biotech Inc. by SYNSORB in April 1999, we applied push down accounting. See note 2 to the audited financial

statements for  
2007.

- (2) Included in total cash are cash and cash equivalents plus short-term investments.
- (3) Included in net loss and loss per common share between March 2008 and April 2006 are quarterly stock based compensation expenses of \$19,593, \$396,278, \$38,909, \$82,573, \$21,396, \$109,670, \$34,671, and \$222,376, respectively.
- (4) We issued 4,600,000 units for net cash proceeds of \$12,063,394 during 2007 with each unit consisting of one common share and one half of one common share purchase warrant. (2006 284,000 common shares for cash proceeds of \$241,400)

(5)

The long-term debt recorded represents repayable loans from the Alberta Heritage Foundation. On January 1, 2007, in conjunction with the adoption of the CICA Handbook section 3855 Financial Instruments, this loan was recorded at fair value (see note 3 of the December 31, 2007 audited financial statements).

- (6) We have not declared or paid any dividends since incorporation.
-

## **LIQUIDITY AND CAPITAL RESOURCES**

### **Liquidity**

As at March 31, 2008, we had cash and cash equivalents (including short-term investments) and working capital positions of \$21,962,626 and \$19,457,103, respectively compared to \$25,213,829 and \$22,732,987, respectively for December 31, 2007. The decrease in the first quarter of 2008 reflects the cash usage from our operating activities and purchase of intellectual property of \$2,991,234 and \$257,304, respectively.

We desire to maintain adequate cash and short-term investment reserves to support our planned activities which include our clinical trial program, product manufacturing, administrative costs, and our intellectual property expansion and protection. In 2008, we expect to continue to enroll patients in our various clinical trials and we also expect to continue with our collaborative studies pursuing support for our clinical trial program. We will therefore need to ensure that we have enough REOLYSIN® to supply our clinical trial and collaborative programs. We still expect our average monthly cash usage to be \$1,660,000 in 2008 and we believe our existing capital resources are adequate to fund our current plans for research and development activities well into 2009. Factors that will affect our anticipated monthly burn rate include, but are not limited to, the number of manufacturing runs required to supply our clinical trial program and the cost of each run, the number of clinical trials ultimately approved, the timing of patient enrollment in the approved clinical trials, the actual costs incurred to support each clinical trial, the number of treatments each patient will receive, the timing of the NCI's R&D activity, and the level of pre-clinical activity undertaken.

In the event that we choose to seek additional capital, we will look to fund additional capital requirements primarily through the issue of additional equity. We recognize the challenges and uncertainty inherent in the capital markets and the potential difficulties we might face in raising additional capital. Market prices and market demand for securities in biotechnology companies are volatile and there are no assurances that we will have the ability to raise funds when required.

### **Capital Expenditures**

We spent \$257,304 on intellectual property in the first quarter of 2008 compared to \$218,177 in the first quarter of 2007. The change in intellectual property expenditures reflects the timing of filing costs associated with our expanded patent base. As well, we have benefited from fluctuations in the Canadian dollar as our patent costs are typically incurred in U.S. currency. At the end of the first quarter of 2008, we had been issued over 170 patents including 26 U.S. and eight Canadian patents as well as issuances in other jurisdictions. We also have over 180 patent applications filed in the U.S., Canada and other jurisdictions.

### **Investing Activities**

Under our Investment Policy, we are permitted to invest in short-term instruments with a rating no less than R-1 (DBRS) with terms less than two years. We have \$14,635,920 invested under this policy and we are currently earning interest at an effective rate of 2.74% (2007 - 4.08%).

---

## **CHANGES IN ACCOUNTING POLICIES INCLUDING INITIAL ADOPTION**

### *Capital Disclosures*

On January 1, 2008, the Company adopted the new recommendations of the Canadian Institute of Chartered Accountants ( CICA ) for disclosure of the Company s objectives, policies and processes for managing capital (CICA Handbook Section 1535), as discussed further in Note 5 of our interim consolidated financial statements.

### *Financial Instruments Disclosures*

On January 1, 2008, the Company adopted the new recommendations of the CICA for disclosures about financial instruments, including disclosures about fair value and the credit, liquidity and market risks associated with financial instruments (CICA Handbook Section 3862), as discussed further in Notes 6 and 7 of our interim consolidated financial statements.

### *Financial Instruments Presentation*

On January 1, 2008, the Company adopted the new recommendations of the CICA for presentation of financial instruments (CICA Handbook Section 3863). Adoption of this standard had no impact on the Company s financial instrument related presentation disclosures.

## **OTHER MD&A REQUIREMENTS**

We have 41,180,748 common shares outstanding at April 30, 2008. If all of our warrants (4,220,000) and options (3,870,493) were exercised we would have 49,271,241 common shares outstanding.

Additional information relating to Oncolytics Biotech Inc. is available on SEDAR at [www.sedar.com](http://www.sedar.com).

### *Controls and Procedures*

There were no changes in our internal controls over financial reporting during the quarter ended March 31, 2008 that materially affected or are reasonably likely to materially affect, internal controls over financial reporting.
