- (Notes) 1. Unrealized Gains (Losses) include ¥26,715 million and ¥20,174 million, which were recognized in the statements of income for the year ended March 31, 2016 and the nine months ended December 31, 2016, respectively, by applying the fair-value hedge method.
2. As for the quarterly consolidated balance sheet amount (consolidated balance sheet amount), fair value of Japanese stocks with a quoted market price is determined based on the average quoted market price, or other reasonable value during the last month of the nine months ended December 31, 2016 (last month of the fiscal year ended March 31, 2016), and fair value of securities other than Japanese stocks is determined at the quoted market price if available, or other reasonable value as of December 31, 2016 (March 31, 2016).
3. Certain Securities other than Trading Securities (excluding Securities for which it is deemed to be extremely difficult to determine the fair value) are devalued to the fair value, and the difference between the acquisition cost and the fair value is treated as the loss for the nine months ended December 31, 2016 (the fiscal year ended March 31, 2016) (impairment (devaluation)), if the fair value (primarily the closing market price as of December 31, 2016 (March 31, 2016)) has significantly deteriorated compared with the acquisition cost (including amortized cost), and unless it is deemed that there is a possibility of a recovery in the fair value.

The amount of impairment (devaluation) for the fiscal year ended March 31, 2016 was ¥9,161 million.

The amount of impairment (devaluation) for the nine months ended December 31, 2016 was ¥1,241 million.

The criteria for determining whether a security's fair value has significantly deteriorated are outlined as follows:

Securities whose fair value is 50% or less of the acquisition cost

Securities whose fair value exceeds 50% but is 70% or less of the acquisition cost and the quoted market price maintains a certain level or lower

4. Floating-rate Japanese Government Bonds

Fair values of Floating-rate Japanese Government Bonds, according to our determination that current market prices may not reflect the fair value, are based on the reasonably calculated prices as book value on the quarterly consolidated balance sheet (consolidated balance sheet).

In deriving the reasonably calculated prices, we used the Discounted Cash Flow method as well as other methods. The price decision variables include the yield of 10-year Japanese Government Bonds and the volatilities of interest rate swap options for 10-year Japanese Government Bonds as underlying assets.
