2016

Chairman's Letter

q

Dear Fellow Arconic Shareholders,

In last year's letter to Alcoa Inc. shareholders, I outlined our conviction and commitment that the separation of Alcoa Inc. would unlock the Company's full value for our investors. On November 1, 2016, we completed the separation into two powerful, independent companies: Arconic and Alcoa Corporation. Within one hundred days, Arconic's stock price increased 47.8 percent, significantly more than the 12.6 percent increase of the S&P Industrials Index or the 14 percent increase of the S&P Aerospace and Defense ETF.

THE SEPARATION WAS THE CULMINATION OF TRANSFORMING ALCOA INC.

It took years of restructuring and strengthening the businesses in Alcoa's upstream portfolio to ensure it could stand well on its own as an independent public company. We closed, sold or curtailed 43 percent of high-cost smelting operating capacity and 35 percent of high-cost refining operating capacity to enable the aluminum and alumina businesses to remain globally competitive throughout the volatile swings of commodity prices. To further enhance upstream profitability, we expanded our higher-margin cast products business, introduced an alumina pricing mechanism to free our refineries from the London Metal Exchange price and established a third-party bauxite business.

To strengthen our value-add portfolio, we relentlessly drove productivity and operational improvements, more than doubling segment margins since 2008. Building on investments in new technologies, upgrading our plants and making strategic acquisitions, we expanded further into high performance materials, such as titanium and nickel superalloys, and transformed the portfolio into a precision engineering and advanced manufacturing leader. In our aerospace segment, Arconic can now supply 90 percent of the structural and rotating components of a commercial aero engine, and on airframes our content flies from nose to tail on both metallic and carbon-fiber-reinforced plastic aircraft. Our customers are responding to those investments and innovations, awarding Arconic \$13 billion in aerospace contracts during 2015 and 2016.

2016 was a pivotal year in completing the transformation. The Company's leaders and employees did double duty, successfully executing a complex separation process on schedule and on budget, while delivering on commitments to

our customers. The Company formed a Separation Program Office to maintain tight cross-functional coordination over 35 workstreams with more than 20,000 milestones, involving 294 projects affecting 266 sites in 27 countries. At the same time, the team was able to increase profits and margins of all three Arconic segments and reduce debt by \$750 million. The Company finished the year with \$1.9 billion in cash.

PAGE

2

ARCONIC ANNUAL HIGHLIGHTS
2016

While we were conducting the separation, commodity prices fell to unusually low levels, resulting in a substantially reduced debt-carrying capacity of Alcoa Corporation. To allow the separation to conclude on time, and for Alcoa Corporation to start with a strong balance sheet built to weather commodity cycles, Arconic took on extra debt burden. As a counter balance, Arconic retained a 19.9 percent stake in Alcoa Corporation with the intention of managing it to maximize the upside for our shareholders. On February 14, 2017, after a 65 percent rise in Alcoa Corporation stock, Arconic monetized more than 60 percent of its stake. The resulting proceeds of approximately \$890 million strengthen Arconic's cash balance, which provides financial flexibility to pay down debt and/or pursue share repurchases, based on an assessment of relative return.

ARCONIC HAS A COMPELLING LONG-TERM INVESTMENT VALUE PROPOSITION

In launching Arconic, we have stressed an owner mindset: every leader and employee working every day as if Arconic were their own family business. Frugal in spending, efficient in allocating capital, dedicated and passionate about helping customers win and constantly focused on building talent, we are committed to creating value for Arconic's shareholders that surpasses the performance of our peers. And we've only just begun. Let me outline a few of the many value creation opportunities we are tapping for our shareholders.

Solid market positions and margin profile. With approximately 80 percent of Arconic's revenues in 2016 from businesses where the Company holds either the number one or number two market position, we have a highly competitive portfolio that we believe has strong margin and cash-generation potential in profitable segments. We expect our adjusted EBITDA margins to continue to expand from approximately 15 percent in 2017 to approximately 17 percent in 2019, and our free cash flow is forecast to double from more than \$350 million in 2017 to approximately \$700 million in 2019.

In every core market, Arconic's businesses are positioned to capture near-term growth tailwinds. The aerospace industry is gearing up for the next generation of commercial aircraft engines and structures. Following the dramatic success of Arconic's innovations for Ford's top-selling F-150, aluminum penetration is accelerating across the automotive industry. Energy and environmental trends are creating new opportunities for our commercial transportation and building and construction businesses. Our customers' appreciation of Arconic's differentiated technologies are producing sustainable share gains for our businesses in each of those segments.

Clear execution path to incremental value by continuing to improve our businesses. We are focused on major end markets

like aerospace, automotive, commercial transportation and building and construction. The initiatives and actions we have underway are set to improve margins, free cash flow and return on capital.

Strong balance sheet profile with financial flexibility. In addition to a strong liquidity base, Arconic's remaining stake in Alcoa Corporation will continue to be managed responsibly for shareholder value. To guide investments and other allocations of capital, we have established exacting criteria to maximize and track returns.

ARCONIC'S MANAGEMENT AND BOARD ARE COMMITTED TO MAXIMIZE SHAREHOLDER VALUE

Arconic managers and employees understand the obligations and expectations of an owner mindset. Having proved themselves during a difficult economic downturn and a demanding transformation, they are ready and eager to capture the many opportunities ahead for our shareholders and customers. We have a winning combination of seasoned leaders who led the Company during those challenging times and recruited executives with excellent track records and outstanding experience to bring their unique talents to Arconic.

The leadership team benefits greatly from the counsel and guidance of a highly qualified, proactive Board of Directors. Our 12 independent directors, including seven current or former CEOs, have deep experience relevant to our core industries, technologies and financial needs. They've applied their experience and insights in guiding Arconic's strategy and reviewing and approving the Company's goals. Based on investor feedback and industry benchmarks, they have created an executive compensation system that is fully aligned with shareholder value creation. The Board also set high standards for themselves, adopting important new governance best practices for Arconic.

I greatly appreciate the strong support that our directors have given to me personally. In addition to generously sharing wise counsel and practical solutions, they've joined me in delivering the good news of Arconic to our shareholders, prospective investors and analysts.

On behalf of our entire Board of Directors, I hope that this first Arconic Annual Highlights Report demonstrates that our 2016 performance, progress and plans for the future reinforce our firm commitment and unparalleled capability to create significant long-term value for you and for all Arconic shareholders.

KLAUS KLEINFELD
CHAIRMAN OF THE BOARD AND CHIEF EXECUTIVE OFFICER

2016 Financial Highlights¹

9

In 2016, we completed the successful separation of Alcoa Inc., unlocking substantial value for our shareholders. Today, Arconic is a major supplier to industry leaders in all the sectors it serves, and holds strong positions in attractive markets; approximately 80 percent of Arconic's revenues in 2016 came from businesses where we hold either the number one or two market position.

Approximately 64 percent of Arconic's total revenue in 2016 was derived primarily from aerospace and transportation markets; the balance was from markets such as industrial and building and construction.

FINANCIAL HIGHLIGHTS

In the face of significant market challenges, we continued to improve our businesses in 2016, recording margin improvements in each of our three segments and delivering strong net savings. Arconic also strengthened its balance sheet, paid down \$750 million of debt and ended the year with a strong cash balance of \$1.9 billion.

Financial and Operating Highlights

<i>\$ IN MILLIONS, EXCEPT PER-SHARE AMOUNTS</i>	2016	2015
SALES	\$12,394	\$12,413
NET (LOSS) INCOME ATTRIBUTABLE TO ARCONIC	(941)	(322)
PER COMMON SHARE DATA ATTRIBUTABLE TO ARCONIC SHAREHOLDERS:²		

BASIC	(2.31)	(0.93)
DILUTED	(2.31)	(0.93)
DIVIDENDS PAID	0.36	0.36
NET INCOME ATTRIBUTABLE TO ARCONIC - AS ADJUSTED	505	298
TOTAL ASSETS	20,038	36,477
CAPITAL EXPENDITURES³	1,125	1,180
CASH PROVIDED FROM OPERATIONS³	870	1,582
COMMON STOCK OUTSTANDING END OF YEAR (000)²	438,520	436,720

¹ On November 1, 2016, Alcoa Inc. successfully separated into two stand-alone companies: Arconic Inc. (the new name for Alcoa Inc.) and Alcoa Corporation. The results discussed in this report include ten months of Alcoa Corporation for full-year 2016. The pre-separation historical results of the businesses that now comprise Alcoa Corporation are presented as discontinued operations in Arconic's financial results for all periods.

² Per share data, common stock outstanding and dividends paid for all periods presented have been retroactively restated to reflect the 1-for-3 reverse stock split which became effective on October 6, 2016.

³ Capital expenditures and Cash provided from operations do not reflect restatement for discontinued operations presentation for any period presented.

See "Calculations of Financial Measures" at the end of this report for reconciliations of certain non-GAAP financial measures (adjusted income, adjusted EBITDA and adjusted EBITDA margin) to the most directly comparable GAAP financial measures.

Excluding the impact of special items, primarily due to charges and costs associated with the separation of Alcoa Inc., Arconic reported 2016 adjusted income from continuing operations of \$505 million, or \$0.98 per share.

Full year 2016 combined segment adjusted EBITDA was \$2.1 billion, up nine percent year over year, with Arconic recording a margin expansion of 140 basis points across all business segments. Full year 2016 consolidated adjusted EBITDA, excluding separation costs, was \$1.7 billion. Our employees delivered \$710 million in gross productivity savings in 2016, with net savings of \$310 million.

At the separation of Alcoa Inc., Arconic chose to retain a 19.9 percent stake in Alcoa Corporation, indicating it would review options for responsibly managing the stake, taking into account its continued upside potential. In early 2017, we monetized more than 60 percent of our stake, resulting in approximately \$890 million in proceeds. The timing and structure of the transaction considered minimizing risk and transaction costs. The proceeds bolster Arconic's cash balance, which provides financial flexibility to pay down debt and/or pursue share repurchases, based on a relative-return assessment.

Strong Productivity Delivers Savings to the Bottom Line

Strongly Positioned in Attractive Markets

5

SEGMENTS DELIVER SOLID PERFORMANCE

Engineered Products and Solutions (EPS) develops and manufactures high performance, engineered products and solutions for the aerospace, industrial gas turbine, commercial transportation and industrial markets.

EPS recorded revenue of \$5.7 billion in 2016, up seven percent year over year, with after-tax operating income (ATOI) of \$642 million, up eight percent year over year, adjusted EBITDA of \$1.2 billion, up eight percent year over year and an adjusted EBITDA margin of 20.9 percent. EPS businesses secured a number of landmark contracts in 2016, including three with Airbus for 3D-printed metal parts.

Global Rolled Products (GRP) manufactures highly-differentiated aluminum sheet and plate products for the aerospace, automotive, commercial transportation, brazing, industrial and regional specialty markets.

GRP recorded revenue of \$4.9 billion in 2016, down seven percent year over year, ATOI of \$269 million, up 20 percent year over year, adjusted EBITDA of \$577 million, up 13 percent year over year, and adjusted EBITDA of \$364 per metric ton. GRP also continued to benefit from the aluminization of the automotive market: in 2016, automotive sheet shipments increased 39 percent year over year. Automotive sheet revenue is expected to grow from \$117 million in 2011 to \$1.3 billion in 2018.

Transportation and Construction Solutions (TCS) brands invented the industries they continue to lead today: both Kawneer and Alcoa Wheels brands hold number one market positions, and customers, architects and end users ask for them by name.

TCS recorded revenue of \$1.8 billion in 2016, down four percent year over year, ATOI of \$176 million, up six percent year over year, adjusted EBITDA of \$291 million, up seven percent year over year, and an adjusted EBITDA margin of 16.1 percent.

10

ARCONIC ANNUAL HIGHLIGHTS
2016

Arconic's largest and fastest growing market is aerospace – an industry in which we have had a major presence since the Wright Brothers' first flight. Fueled by an expanding global middle class and increasing air travel, worldwide demand for aircraft has led to the largest order book in aviation history, with a nine-year production order book for both commercial aircraft and aero engines. With a range of high-performance multi-material and highly engineered products and solutions for aero engines and airframes on virtually every aircraft platform, we are well positioned to benefit from this growth.

In 2016, approximately 43 percent of Arconic's revenues were generated from the aerospace industry, and approximately 80 percent of aerospace revenues were derived from products where we hold either the number one or number two market position. From 2015 through 2016, Arconic won \$13 billion worth of new aerospace contracts, from engine and airframe components to 3D-printed metal parts.

ARCONIC REVENUE SHIPSET VALUE¹

Arconic has achieved substantial share

gains on next generation aircraft:

¹ Aircraft shown represent ~88% of Large Commercial Aircraft (LCA) /total engines for LCA in 2017 through 2020 on a unit basis. Based on Arconic build rate assumptions as of 12/09/2016.

Arconic on Aero

Engines

q

The quest for fuel efficiency has been a driver of innovation in the aerospace industry since the dawn of flight, with every new generation of aircraft becoming approximately 10-15 percent more efficient than the previous one. The vast majority of this efficiency is achieved inside the engine, where Arconic technology plays a critical role.

Our engineers, backed by decades of materials science expertise and working closely with leading aero engine manufacturers, enable:

Advanced single crystal turbine airfoils with specifically aligned grain structures, which increase turbine blade life, temperature capability and strength.

Engineered ceramics that allow turbine airfoil designers to create intricate internal turbine blade cooling schemes that improve efficiency and lengthen the life of the blade.

Advanced coatings that protect the engine airfoils from the extreme combustion temperatures of today's gas turbines.

In addition to airfoils, Arconic holds the number one global market position in aero engine seamless rings and fastening systems. In addition, we are a world-class producer of other structural aero engine components, including those produced with vacuum-melted alloys, machining, performance coatings and hot isostatic pressing.

In 2016, leveraging the earlier expansion of cutting-edge aero engine capabilities in La Porte, Indiana (USA), Arconic signed a long-term contract with GE Aviation for aero engine components in an agreement valued at more than \$1.5 billion over the contract life. Under the terms of the transaction, we are supplying advanced nickel-based superalloy, titanium and aluminum components for a broad range of GE Aviation engine programs.

Also in 2016, we invested in state-of-the-art titanium-aluminide alloy melting technology at our facility in Niles, Ohio (USA). The investment is enabling Arconic to capture growing demand for aero engine parts made with its advanced, lightweight titanium-aluminide alloy. This alloy significantly improves material properties and substantially reduces the weight of low-pressure turbine blades compared to traditional nickel-based alloy materials. It is being used for the first time on single-aisle commercial jets as part of the new CFM International¹ LEAP engines.

¹ The CFM56 and LEAP engines are produced and marketed by CFM International, a 50/50 joint company between GE and Safran Aircraft Engines.

PAGE

14

ARCONIC ANNUAL HIGHLIGHTS
2016

Arconic's solutions for airframes range from the world's largest fuselage panels and wing skins to 1/16-inch-diameter fasteners that hold an aircraft together. We hold the number one global market position in aluminum sheet and plate and fastening systems.

Our Very Thick Plate Stretcher, which will make plate for the aerospace industry's largest high-strength monolithic wing ribs, comes online in 2017.

In 2016, Arconic secured a series of contracts, continuing to win market share in airframes. These include a long-term contract with Embraer – the leading manufacturer of commercial jets up to 130 seats – valued at approximately \$470 million. Under the multi-year agreement, we are supplying aluminum sheet and plate for Embraer's new E2s, the second generation of its E-Jets family of commercial aircraft, a narrow-body medium-range jet airliner.

DAVENPORT, IOWA

Arconic also announced a long-term supply agreement with Boeing for multi-material aerospace parts in 2016. Under this agreement, we are supplying components for the 787 Dreamliner and will supply components for the 777X and the 737 MAX. The agreement draws on capabilities gained through the Firth Rixson acquisition and our new aluminum-lithium facility in Lafayette, Indiana (USA).

Arconic closed the year in airframes with a \$1 billion, multi-year contract with Airbus, under which we are providing aluminum sheet and plate for every Airbus platform flying today. This agreement will give us a significant share gain on the A320 Family – the world's bestselling single aisle aircraft family. This partnership leverages Arconic's new manufacturing capabilities secured by the Very Thick Plate Stretcher investment at our facility in Davenport, Iowa (USA), and it continues to expand our leadership position in the aerospace industry.

We also completed a series of investments to expand capacity to meet growing demand. For example, in June 2016, building on nearly a decade of investment and expansion in Martinsville, Virginia (USA), we announced

an \$8 million expansion of our aerospace parts facility, doubling its forging capacity and creating new, high-skilled jobs.

Arconic Sheet and Plate on Every Airbus Platform

In November 2016, Arconic announced a multi-year contract with Airbus, valued at approximately \$1 billion. The win gives Arconic aluminum sheet and plate an unprecedented position on Airbus's highest volume programs, including a significant share gain on the A320 Family—the world's best-selling single aisle aircraft family—and covers every Airbus platform flying today.

The multi-year agreement began in January 2017 and makes Arconic sole supplier to Airbus for specific applications, including some wing, fuselage and structural components. In addition to Arconic's proprietary alloys—chosen for their combination of strength, corrosion resistance, density savings and manufacturability—Airbus planes will feature Arconic plate products on every platform, used in key applications such as wing ribs, fuselage frames and other structural parts of the aircraft.

This agreement is the first to include material from Arconic's new state-of-the-art Very Thick Plate Stretcher in Davenport, Iowa (USA).

PAGE

18

ARCONIC ANNUAL HIGHLIGHTS
2016

With the potential to achieve more complex geometries, using less material and producing lighter weight parts, we believe additive manufacturing or 3D-printing is poised to revolutionize aerospace manufacturing. Bringing together comprehensive capabilities to harness the full potential of additive manufacturing design optimization to qualification expertise Arconic is at the cutting edge of commercializing this technology for aerospace.

Metal powders used for 3D-printing durable, high-quality aerospace parts are available in limited quantities. In 2016, Arconic opened a state-of-the-art 3D-printing metal powder production facility at the Arconic Technology Center, the world's largest light metal research center.

This expansion has allowed Arconic to produce proprietary titanium, nickel and aluminum powders optimized for 3D-printed aerospace parts, and is part of a \$60 million investment in advanced 3D-printing materials and processes. It builds on our 3D-printing capabilities in California, Georgia, Michigan, Pennsylvania and Texas (USA).

In addition to producing powders, we are advancing a range of additive techniques, including the recently unveiled Ampliforge process, a hybrid technique that combines additive and advanced manufacturing processes. Using the Ampliforge process, Arconic designs and 3D-prints an optimized pre-form, then forges it using our most advanced techniques. In 2016, we continued to pilot the Ampliforge technique in Pittsburgh, Pennsylvania (USA), Sheffield, England and Cleveland, Ohio (USA).

In 2016, we entered into three agreements with Airbus to supply 3D-printed metal parts for its commercial aircraft. The first covers titanium fuselage and engine pylon components; the second, 3D-printed ducting components made of high-temperature nickel superalloys for the A320 family of aircraft. Advanced nickel superalloys offer superior heat resistance for these components, which flow hot air from the aero engine to other parts of the airframe. Under the third agreement, Arconic will supply 3D-printed titanium airframe brackets, also for the A320 platform. Airbus chose to work with Arconic because of our comprehensive capabilities, from materials science leadership to additive manufacturing and aerospace parts qualification.

Arconic's Leading Edge in

Additive Manufacturing

Helps Customers Win

q

Aerospace manufacturers are increasingly turning to additive manufacturing for complex, high-performance parts that cannot be made using traditional manufacturing techniques, for components with a lower buy-to-fly ratio that is, components that require less material to create the final part and to speed time to market for new products.

With our wide-ranging expertise in materials science, manufacturing, design and product qualification, Arconic is already a well-established leader in additive manufacturing. We have the in-house expertise and resources to engineer and control essentially every step of the process important, given the interdependent nature of these steps. For example, we can create a powder tailored to the needs of a specific application; develop the part design and process for a particular

machine; grow the part; complete it via secondary processes; and inspect and qualify it.

Demonstrating this integrated strategy, we developed the proprietary Ampliforge process, which combines additive and advanced manufacturing processes. Using the Ampliforge process, Arconic designs and 3D-prints an optimized preform, then forges it using our most advanced techniques. This process enhances the properties of 3D-printed parts and significantly reduces material input and tooling requirements while simplifying production relative to traditional forging processes.

Additive manufacturing is just beginning to realize its full potential, and at Arconic, we are proud to be at its cutting edge.

Arconic Automotive

q

The automotive industry is increasingly using more aluminum on vehicles for improved safety, performance and fuel efficiency. By 2020, pounds of aluminum per vehicle is projected to increase nearly 20 percent over 2015 levels; from 2010 to 2015, pounds per vehicle increased 19 percent¹.

Today, Arconic has cemented its position as the premier partner to the automotive industry: our lightweight alloys and aluminum sheet solutions are found bumper to bumper – from doors and hoods to heat exchangers. Arconic estimates that it will grow its automotive sheet revenue from \$117 million in 2011 to \$1.3 billion in 2018.

Across its automotive portfolio, 98 percent of Arconic revenues come from products where it is number one or number two in its market.

In 2016, automotive expansions at our facilities in Alcoa, Tennessee (USA), and Davenport, Iowa (USA) – each backed by customer contracts – continued to pay off, as auto sheet shipments rose 39 percent year over year. Through these expansions, we continue to support Ford Motor Company by supplying its best-selling Ford F-150 and F-250 models. We also signed new contracts with Nissan North America, to become its sole supplier of aluminum sheet for seven programs, including the Altima, Murano, Maxima and Titan, and with Fiat Chrysler Automobiles, for the 2017 Chrysler Pacifica.

Our breakthrough Arconic Micromill[®] technology – which produces metal 40 percent more formable and 30 percent stronger than today's incumbent automotive aluminum and twice as formable and at least 30 percent lighter than parts made from high-strength steel – was recognized with a prestigious 2016 R&D 100 Award. The annual R&D 100 Awards, known as the Oscars of Innovation, is an international competition that recognizes the 100 most technologically significant products introduced in the marketplace over the past year.

In 2016, efforts to commercialize Micromill continued as we signed qualification agreements with more major original equipment manufacturers (OEMs); today, these agreements number 13 worldwide. Arconic also engaged 12 potential licensees in 2016, including potential joint venture partners.

26

ARCONIC ANNUAL HIGHLIGHTS
2016

Arconic's 41,500 employees across 25 countries are as passionate about our values as we are about industry-changing technology. We pride ourselves on our diverse, high-performance culture.

This year, we were proud to be included on the 2017 FORTUNE World's Most Admired Companies list, an annual ranking of reputation based on surveys of executives, analysts and directors who rate companies in their own industries. We have proudly been named the most admired metals company in the world for the past six years, and this is the second consecutive year our company received top scores in all key attributes: innovation, people management, social responsibility, use of corporate assets, quality of management, financial soundness, long-term investment value, quality of products and services and global competitiveness.

Arconic was recognized for its performance in 2016, including before its separation from Alcoa Corporation, and was therefore included in the metals category, which it topped. The ranking reflects the contributions of both Arconic and Alcoa Corporation employees.

SAFETY

Nothing matters more than human life. This has long been a guiding principle at Arconic, and safety is one of our most cherished values. In 2016, 40 percent of Arconic businesses achieved their best-ever DART (Days Away Restricted or Transfer) rates, a key metric of employee safety.

Importantly, each of our recently acquired businesses—Firth Rixson, RTI and TITAL—also saw dramatic improvements in their historical DART rates, recording improvements of 40 percent, 52 percent and 67 percent, respectively, in 2016. Most importantly, the businesses that today comprise Arconic had zero work-related fatalities in 2016.

ETHICS AND COMPLIANCE

Arconic promotes a speak-up culture, in which employees are encouraged to ask questions and raise concerns. Our Ethics and Compliance Program drives a global culture of integrity, compliance, prevention and risk identification and mitigation, with a strong focus on anti-corruption and trade compliance.

In 2016, Arconic launched its new Code of Conduct to guide employees on how to lead with integrity every day, everywhere.

Updated Business Conduct, Anti-Retaliation and Conflicts of Interest policies were also launched in 2016. Our ethics hotline (Integrity Line) and Integrity Help Chain provide multiple channels through which employees can voice their questions and concerns.

Arconic's Integrity Champions partner with their business and resource units to integrate ethics and compliance into their organizations and serve as trusted advisors to their colleagues. In 2016, the Champions were involved in Project Integrity, with the goal of conducting live trainings on issues most relevant to employees operating in diverse, global

locations.

INCLUSION & DIVERSITY

We are committed to creating an inclusive environment where all individuals feel and are valued. In 2016, Arconic continued to diversify our workforce, creating teams that better reflect the communities in which we operate. We were also proud to increase membership in our Employee Resource Groups (ERGs), employee-led groups formed around common interests and/or backgrounds. In 2016, Arconic launched three new ERGs – the Arconic Veterans Network, the Arconic Hispanic Network and the Next Generation Network – to further employee engagement and understanding of these diverse communities.

Arconic was once again recognized for its efforts related to lesbian, gay, bisexual and transgender workplace equality, earning a perfect score of 100 on the 2017 Corporate Equality Index, which is administered by the Human Rights Campaign Foundation. This is the eighth consecutive year in which we have earned a perfect score; our previous years rankings are listed under Alcoa Inc.

INVESTING IN OUR COMMUNITIES:

ARCONIC FOUNDATION

November 2016 saw the launch of Arconic Foundation, an independently endowed philanthropy that supports programs to help prepare the 21st century engineering and advanced manufacturing workforce. The work of Arconic Foundation is further enhanced by the thousands of employee volunteers who share their talents and time to make a difference in their communities.

Arconic Foundation made its inaugural grant to Engineers Without Borders USA. The \$300,000 investment will support organizations around the world working to strengthen and promote engineering education and equip the next generation of global innovators. By 2020, over 1,000 students are targeted to complete the program. The partnership will include activities in select markets where Arconic has an operational footprint and an employee base: the United States, the United Kingdom, Mexico, France, Germany, Canada and Brazil.

Forward Looking Statements

This communication contains statements that relate to future events and expectations and as such constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995.

Forward-looking statements include those containing such words as anticipates, believes, could, estimates, expects, forecasts, guidance, goal, intends, may, outlook, plans, projects, seeks, sees, should, targets, words of similar meaning. All statements that reflect Arconic's expectations, assumptions or projections about the future, other than statements of historical fact, are forward-looking statements, including, without limitation, forecasts relating to the growth of end markets and potential share gains; statements and guidance regarding future financial results or operating performance; and statements about Arconic's strategies, outlook, business and financial prospects. Forward-looking statements are not guarantees of future performance, and it is possible that actual results may differ materially from those indicated by these forward-looking statements due to a variety of risks and uncertainties, including, but not limited to: (a) deterioration in global economic and financial market conditions generally; (b) unfavorable changes in the markets served by Arconic; (c) the inability to achieve the level of revenue growth, cash generation, cost savings, improvement in profitability and margins, fiscal discipline, or strengthening of competitiveness and operations anticipated from restructuring programs and productivity improvement, cash sustainability, technology advancements, and other initiatives; (d) changes in discount rates or investment returns on pension assets; (e) Arconic's inability to realize expected benefits, in each case as planned and by targeted completion dates, from acquisitions, divestitures, facility closures, curtailments, expansions, or joint ventures; (f) the impact of cyber attacks and potential information technology or data security breaches; (g) political, economic, and regulatory risks in the countries in which Arconic operates or sells products; (h) the outcome of contingencies, including legal proceedings, government or regulatory investigations, and environmental remediation; and (i) the other risk factors discussed in Arconic's Form 10-K for the year ended December 31, 2016, and other reports filed with the U.S. Securities and Exchange Commission (SEC). Arconic disclaims any obligation to update publicly any forward-looking statements, whether in response to new information, future events or otherwise, except as required by applicable law. Market projections are subject to the risks discussed above and other risks in the market.

Calculation of Financial Measures (unaudited)

(dollars in millions, except per metric ton amounts)

Reconciliation of Adjusted Income

Year ended 12/31/2016 12/31/2015

	\$ (941)	\$ (322)
--	----------	----------

The average number of shares applicable to diluted EPS for Net loss attributable to Arconic common shareholders excludes certain share equivalents as their effect was anti-dilutive (see Footnote Q to the Consolidated Financial Statements). However, certain of these share equivalents may become dilutive in the EPS calculation applicable to Net income attributable to Arconic common shareholders as adjusted due to a larger and/or positive numerator. Specifically:

for the year ended December 31, 2016, share equivalents associated with both outstanding employee stock options and awards and convertible notes related to the acquisition of RTI International Metals were

Net loss attributable to Arconic		
Discontinued operations ⁽¹⁾	(121)	165
Special items ⁽²⁾ :		
Restructuring and other charges	155	214
Discrete tax items ⁽³⁾	1,290	216
Other special items ⁽⁴⁾	196	39
Tax impact ⁽⁵⁾	(74)	(14)
Net income attributable to Arconic as adjusted	\$ 505	\$ 298

Diluted EPS ⁽⁶⁾ :		
Net loss attributable to Arconic common shareholders	\$ (2.31)	\$ (0.93)
Net income attributable to Arconic common shareholders as adjusted	\$ 0.98	\$ 0.54

Net income attributable to Arconic as adjusted is a non-GAAP financial measure. Management believes that this measure is meaningful to investors because management reviews the operating results of Arconic excluding the impacts of restructuring and other charges, discrete tax items, and other special items (collectively, special items). There can be no assurances that additional special items will not occur in future periods. To compensate for this limitation, management believes that it is appropriate to consider both Net loss attributable to Arconic determined under GAAP as well as Net income attributable to Arconic as adjusted.

1. On November 1, 2016, the former Alcoa Inc. was separated into two standalone, publicly-traded companies, Arconic and Alcoa Corporation, by means of a pro rata distribution of 80.1 percent of the outstanding common stock of Alcoa Corporation to Alcoa Inc. shareholders. Accordingly, the results of operations of Alcoa Corporation have been reflected as discontinued operations for all periods presented.

dilutive based on Net income attributable to Arconic common shareholders as adjusted, resulting in a diluted average number of shares of 453,118,372 (after-tax interest expense of \$9 needs to be added back to the numerator since the convertible notes were dilutive); and

for the year ended December 31, 2015, share equivalents associated with employee stock options and awards were dilutive based on Net income attributable to Arconic common shareholders as adjusted, resulting in a diluted average number of shares of 424,628,747.

Reconciliation of Net Loss Attributable to Arconic to

Combined Segment Adjusted EBITDA (in millions)

	2016	2015
Net loss attributable to Arconic	\$ (941)	\$ (322)
Discontinued operations ⁽¹⁾	(121)	165
Unallocated Amounts (net of tax):		
Impact of LIFO	11	(66)
Metal price lag	(21)	115
Interest expense	324	307
Noncontrolling interests		1
Corporate expense	306	252
Impairment of goodwill		25
Restructuring and other charges	114	192
Other ⁽²⁾	1,415	317
Combined segment ATOI	\$ 1,087	\$ 986

2. In the second quarter of 2016, management changed the manner in which special items are presented in Arconic's Reconciliation of Adjusted Income. This change resulted in special items being presented on a pretax basis and the related tax impact on special items being aggregated into separate respective line items. The special items for the year ended December 31, 2015 were updated to conform to the current period presentation.

3. Discrete tax items include the following:

for the year ended December 31, 2016, a charge for valuation allowances related to the November 1, 2016 separation (see Note 1 above) (\$1,267), a net charge for the remeasurement of certain deferred tax assets due to tax rate and tax law changes (\$51), a net benefit for valuation allowances not associated with the separation (\$18), and a net benefit for a number of small items (\$10); and

for the year ended December 31, 2015, a charge for valuation allowances related to certain deferred tax assets in the U.S. and Iceland (\$190), a net charge for other valuation allowances and for a number of small items (\$26).

4. Other special items include the following:

for the year ended December 31, 2016, costs associated with the planned separation of Alcoa (\$205), unfavorable tax costs associated with the redemption of company-owned life insurance policies (\$100), a favorable adjustment to the contingent earn-out liability and a post-closing adjustment both of which related to the November 2014 acquisition of Firth Rixson (\$76), a favorable tax benefit related to the currency impacts of a distribution of previously taxed income (\$49), and unfavorable tax costs associated with the sale of a US subsidiary with book goodwill (\$16); and

for the year ended December 31, 2015, costs associated with the acquisitions of RTI International Metals and TITAL (\$28), an impairment of goodwill related to the soft alloy extrusions business in Brazil (\$25), costs associated with the planned separation of Alcoa (\$24), a gain on the sale of land (\$19), and a gain on the sale of an equity investment in a China rolling mill (\$19).

5. The tax impact on special items is based on the applicable statutory rates whereby the difference between such rates and Arconic's consolidated estimated annual effective tax rate is itself a special item (see footnote 2 above).

Add combined segment:		
Depreciation and amortization	504	479
Income taxes	472	430
Other		(2)
Combined segment Adjusted EBITDA	\$ 2,063	\$ 1,893
Third party sales	\$12,394	\$12,477
Adjusted EBITDA Margin	16.6%	15.2%

Arconic's definition of Adjusted EBITDA (Earnings before interest, taxes, depreciation, and amortization) is net margin plus an add-back for depreciation and amortization. Net margin is equivalent to Sales minus the following items: Cost of goods sold; Selling, general administrative, and other expenses; Research and development expenses; and Provision for depreciation and amortization. The Other line in the table above includes gains/losses on asset sales and other non-operating items. Adjusted EBITDA is a non-GAAP financial measure. Management believes that this measure is meaningful to investors because Adjusted EBITDA provides additional information with respect to Arconic's operating performance and the Company's ability to meet its financial obligations. The Adjusted EBITDA presented may not be comparable to similarly titled measures of other companies.

1. On November 1, 2016, Alcoa Inc. completed its separation into two standalone, publicly-traded companies. Arconic includes the former Alcoa Inc. segments: Engineered Products and Solutions, Transportation and Construction Solutions, and Global Rolled Products, except for the Warrick, IN rolling

6. At a special meeting of Arconic common shareholders held on October 5, 2016, shareholders approved a 1-for-3 reverse stock split of Arconic's outstanding and authorized shares of common stock which became effective on October 6, 2016. All share and per share data for all periods presented have been updated to reflect the reverse stock split.

operations and the equity interest in the rolling mill at the joint venture in Saudi Arabia which both became part of Alcoa Corporation. The Global Rolled Products segment information has been updated to exclude the Warrick, IN rolling operations and the equity interest in the rolling mill at the joint venture in Saudi Arabia.

2. Other for the year ended December 31, 2016, include a charge for valuation allowances related to the November 1, 2016 separation (\$1,267) and a net charge for the remeasurement of certain deferred tax assets due to tax rate and tax law changes (\$51).

**Reconciliation of Arconic Adjusted EBITDA
Excluding Separation Costs**

Equity (income) loss						(1)	(2)	(2)	
Income taxes	67	63	69	67	49	38	18	(21)	
Other		(1)		(2)	(9)	(1)			
Adjusted EBITDA	\$ 291	\$ 271	\$ 291	\$ 274	\$ 208	\$ 190	\$ 137	\$ 47	\$ 135
Third-party sales	\$1,802	\$1,882	\$2,021	\$1,951	\$1,914	\$1,936	\$1,656	\$1,537	\$2,270
Adjusted EBITDA Margin	16.1%	14.4%	14.4%	14.0%	10.9%	9.8%	8.3%	3.1%	5.9%

Arconic's definition of Adjusted EBITDA (Earnings before interest, taxes, depreciation, and amortization) is net margin plus an add-back for depreciation, and amortization. Net margin is equivalent to Sales minus the following items: Cost of goods sold; Selling, general administrative, and other expenses; Research and development expenses; and Provision for depreciation, depletion, and amortization. The Other line in the tables above includes gains/losses on asset sales and other nonoperating items. Adjusted EBITDA is a non-GAAP financial measure. Management believes that this measure is meaningful to investors because Adjusted EBITDA provides additional information with respect to Arconic's operating performance and the Company's ability to meet its financial obligations. The Adjusted EBITDA presented may not be comparable to similarly titled measures of other companies.

1. Excludes the Warrick, IN rolling operations and the equity interest in the rolling mill at the joint venture in Saudi Arabia, both of which were previously part of the Global Rolled Products segment but became part of Alcoa Corporation effective November 1, 2016.
2. Includes 54 thousand metric tons (kmt) for the Tennessee packaging business in 2016. This amount represents the volume at Arconic's Tennessee operations associated with the Toll Processing and Services Agreement that Arconic and Alcoa Corporation entered into in connection with the separation of the companies. Pursuant to this agreement, this amount is not reported in Arconic's shipments but has been included in the calculation for adjusted EBITDA / Total shipments for historical comparative purposes.

Arconic has not provided a reconciliation of the forward-looking financial measures of adjusted EBITDA margin and free cash flow to the most directly comparable GAAP financial measures because Arconic is unable to quantify certain amounts that would be required to be included in the GAAP measures without unreasonable efforts, and Arconic believes such reconciliations would imply a degree of precision that would be confusing or misleading. In particular, reconciliations of these forward-looking non-GAAP financial measures to the most directly comparable GAAP measures are not available without unreasonable efforts due to the variability and complexity with respect to the charges and other components excluded from these non-GAAP measures, such as the effects of foreign currency movements, equity income, gains or losses on sales of assets, taxes and any future restructuring or impairment charges. These reconciling items are in addition to the inherent variability already included in the GAAP measures, which includes, but is not limited to, price/mix and volume.
