upon knowledge of facts as of the date of this current report and its assumptions about future event forward-looking statements are subject to various risks and uncertainties that may be outside Edi International's control. Edison International has no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. The report should be read with Edison International's Annual Report on Form 10-K for the year ended Edusor and Subsequent Quarterly Reports on Form 10-Q.

Section 8 - Other Events

Item 8.01 Other Events.

On December 12, 2006, Edison International's indirect, wholly-owned subsidiary, Midwest Generation announced that it had reached an agreement in principle with the Illinois Environmental Protection reduce mercury, nitrogen oxide and sulfur dioxide emissions at Midwest Generation's Illinois coal plants.

A copy of the press release announcing the agreement in principle is attached as Exhibit 99.1 to Report on Form 8-K.

Implementation of the agreement will require further regulatory proceedings in order to become effonce implemented the agreement will provide reasonable certainty of the timing and amount of emiss reductions which will be required of Midwest Generation's Illinois plants for these pollutants the No assurance can be given that all required regulatory approvals will be received and if not received Generation will remain subject to existing and future requirements as to emissions of these pollutants.

If the agreement is implemented as contemplated, Midwest Generation will be required to achieve semissions reductions through a combination of environmental retrofits or unit shutdowns. The agree contemplates three phases with each phase relating to one of the pollutants involved. Capital expuil be required for each phase.

The first phase involves installing by 2009 activated carbon injection technology for the removal a technology which Midwest Generation has been testing at some of its plants. Capital expenditure to these controls are currently estimated to be approximately \$60 million.

The second phase requires the installation by the end of 2011 of additional controls to remove ni on several units which do not currently have these controls. Capital expenditures for these controls currently estimated to be approximately \$450 million.

Thereafter, during the third phase of the plan, the focus will be on the reduction of sulfur diox emissions. Midwest Generation will be required for several units at its six plants in Illinois explace controls on these units between 2012 and 2018 for this purpose or to remove them from serving Generation will consider many factors in making this choice including, among others, an assessment cost and performance of environmental technologies and equipment, the remaining estimated useful affected unit and the market outlook for the prices of various commodities including electrical expacity, coal and natural gas. In view of the many factors involved,

2

Page 2

Midwest Generation has not at this time determined what actions it may take at each affected un for optimal compliance with the agreement during its third phase. At this time, however, addition expenditures during the third phase of the plan are currently estimated as being in the range of approximately \$2.2 billion to \$2.9 billion depending on the number of units on which controls are versus the number which are removed from service. For a number of the reasons described above, a

Edgar Filing: EDISON INTERNATIONAL - Form 8-K

capital expenditures may vary substantially from the above estimates.

Section 9 - Financial Statements and Exhibits

Item 9.01 Financial Statements and Exhibits.

- (d) Exhibits
- 99.1 Press release of Midwest Generation, LLC dated December 12, 2006.
