Planetvu Chooses Internap and VitalStream to Deliver Global IPTV

-- Combined Technologies Enable Broadcast Quality of World's First Live TV Service Over the Internet--

ATLANTA, GEORGIA - (February 12, 2007) - Internap Network Services Corporation (NASDAQ: INAP), and VitalStream Holdings, Inc (NASDAQ:VSTH) today announced that Planetvu Corporation, a pioneer in the development and delivery of multi-channel television services over Internet protocol (IPTV), has selected a combination of the companies' technologies to deliver live on-demand TV programming across the public Internet.

Using Internap's premium IP connectivity, colocation and route optimization appliances, combined with VitalStream's content delivery network (CDN), Planetvu has met the challenge of distributing broadcast quality content to over 205 million unique broadband households in over 120 countries. Collectively, the technologies provide an end-to-end solution that delivers fast, reliable access to Planetvu's IPTV service from anywhere in the world.

Planetvu's global footprint utilizes public networks, so acquiring live television signals into its platform as well as distributing content to customers brings unique physical challenges. Delivering a broadcast quality picture over the public Internet required specific expertise ultimately delivered by the combined solution of Internap and VitalStream.

"As a company with an aggressive vision for growth, we need technology partners willing to work with us to support our long-term development goals," said Stuart Ross, president and chief executive officer of Planetvu. "With Internap and VitalStream, we can confidently increase the number of subscribers while providing innovative services to our current and new customers."

Ross added, "After unsuccessful attempts by nearly a dozen other companies, the results from implementing the Internap solution were both effective and dramatic. The technology overcame packet loss and network congestion, which resulted in a superb quality TV signal. Since then, our customer satisfaction has significantly improved thanks to the network's high performance."

Once inside the Internap robust data center, VitalStream delivers Planetvu's live video using the Windows Media platform. The VitalStream content delivery network architecture reliably delivers broadcast quality content to Planetvu's large global audience regardless of location, size or device. VitalStream's

MediaConsole(R) application allows Planetvu to easily acquire business intelligence and other important metrics such as audience size, location and viewing time needed to assess ROI.
