Equity Offering

CALCULATION OF REGISTRATION FEE

Title of Each Class of Securities to be Registered	Aggregate Offering Price	Amount of Registration Fee⁽¹⁾
Ordinary Shares, par value 25 ZAR cents per share ⁽²⁾	\$789,090,000 ⁽³⁾	\$56,262.12

(1) Calculated in accordance with Rule 457(r) under the Securities Act of 1933.

(2) Each American Depositary Share (ADS) represents one ordinary share. ADSs issuable upon deposit of the ordinary shares registered hereby have been registered pursuant to separate Registration Statements on Form F-6 (File Nos. 333-133049 and 333-159248).

(3) Assumes all ordinary shares offered hereby are sold in the form of ADS.

**Filed pursuant to Rule 424(b)(5)
Registration No. 333-161634**

Prospectus Supplement to Prospectus dated April 20, 2010

15,773,914 Ordinary Shares

AngloGold Ashanti Limited

We, AngloGold Ashanti Limited, are offering an aggregate of 15,773,914 of our ordinary shares, whether in the form of ordinary shares or American depositary shares representing ordinary shares, or ADSs. The public offering price per ordinary share is ZAR 308.37 and the public offering price per ADS is \$43.50.

We have granted the underwriters an option exercisable for a period of 30 days from the date of this prospectus supplement to purchase up to 2,366,086 additional ordinary shares, in the form of ordinary shares or ADSs, at the initial price to investors, less the underwriting discounts, to cover over-allotments, if any.

Our ADSs, each currently representing one ordinary share, are listed on the New York Stock Exchange, or NYSE, under the symbol AU . Our ordinary shares are listed on the JSE Limited, or the JSE, under the symbol ANG and on other stock exchanges in London, Paris and Ghana and in the form of depositary interests in Brussels, Ghana and Australia. On September 13, 2010 the closing price of our ordinary shares on the JSE was ZAR 321.90 per ordinary share and the closing price of our ADSs on the NYSE was \$44.59 per ADS.

Concurrently with this offering of ordinary shares and ADSs, under a separate prospectus supplement, AngloGold Ashanti Holdings Finance plc, our indirect wholly-owned subsidiary, is offering \$686,162,400 million aggregate principal amount (or \$789,086,750 million aggregate principal amount if the underwriters of that offering exercise

their over-allotment option with respect to that offering in full) of 6.00% mandatory convertible subordinated bonds due 2013 that will be fully and unconditionally guaranteed by us on a subordinated basis and mandatorily convertible into our ADSs (or, in certain circumstances, the cash value thereof). The mandatory convertible bonds will initially be convertible into a maximum of 15,773,913 ADSs (or a maximum of 18,140,000 ADSs in total if the underwriters in that offering exercise their over-allotment option with respect to that offering in full). Neither the completion of this offering nor of the mandatory convertible subordinated bonds offering will be contingent on the completion of the other.

See Risk Factors starting on page S-16 of this prospectus supplement to read about factors you should consider before buying our ordinary shares.

Neither the Securities and Exchange Commission, or SEC, nor any other regulatory body has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus supplement and the accompanying prospectus. Any representation to the contrary is a criminal offense.

	Per ADS	Total⁽¹⁾⁽²⁾
Initial price to investors	\$ 43.50	\$ 686,165,259
Underwriting discount	\$ 0.87	\$ 13,723,305
Proceeds, before expenses, to us	\$ 42.63	\$ 672,441,954

(1) Assuming all ordinary shares offered hereby are sold in the form of ADSs.

(2) Assuming the underwriters do not exercise their over-allotment option.

Delivery of the ordinary shares and ADSs against payment is expected to occur on September 22, 2010.

ABOUT THIS PROSPECTUS SUPPLEMENT

This document consists of two parts. The first part is this prospectus supplement, which describes the specific terms of this offering of ordinary shares and ADSs of AngloGold Ashanti Limited, or AngloGold Ashanti. The second part, the accompanying base prospectus, presents more general information. Generally, when we refer only to the prospectus, we are referring to the base prospectus, including the documents incorporated by reference in the base prospectus.

If the description of this offering varies between this prospectus supplement and the accompanying prospectus, you should rely on the information in this prospectus supplement.

You should rely only on the information contained in this document or in one to which we have referred you in this prospectus supplement and the accompanying prospectus. We have not authorized anyone to provide you with information that is different. This document may be used only where it is legal to sell these securities. The information in this document may be accurate only on the date hereof.

Unless the context requires otherwise, in this prospectus supplement, the Company, we or us refers to AngloGold Ashanti Limited and its consolidated subsidiaries.

In this prospectus supplement, references to rands, ZAR and R are to the lawful currency of the Republic of South Africa, references to Australian dollars and A\$ are to the lawful currency of Australia, references to US dollars, dollars and \$ are to the lawful currency of the United States, references to British pounds are to the lawful currency of the United Kingdom, references to cedis are to the lawful currency of Ghana, references to Brazilian real and BRL are to the lawful currency of Brazil and references to Argentinean pesos are to the lawful currency of Argentina.

In connection with the offering, the underwriters are not acting for anyone other than us and they will not be responsible to anyone other than us for providing the protections afforded to their clients or for providing advice in relation to the offering.

WHERE YOU CAN FIND MORE INFORMATION

We file annual and other reports with the SEC. The SEC maintains a website (<http://www.sec.gov>) on which our annual and other reports are made available. Such reports may also be read and copied at the SEC's public reference room at 100 F Street, N.E., Washington DC 20549. Please call the SEC at +1-800-SEC-0330 for further information on the public reference room. You may also read and copy these documents at the offices of the New York Stock Exchange, 20 Broad Street, New York, New York 10005.

NOTE REGARDING FORWARD-LOOKING STATEMENTS

This prospectus supplement includes and incorporates by reference forward-looking information within the meaning of Section 27A of the Securities Act of 1933, as amended, or the Securities Act, and Section 21E of the Securities Exchange Act of 1934, as amended, or the Exchange Act. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements, including, without limitation, those concerning: our strategy to reduce our gold hedging positions including the extent and effect of the reduction of our gold hedging positions; the economic outlook for the gold mining industry; expectations regarding gold prices, production, cash costs and other operating results; growth prospects and outlook of our operations, individually or in the aggregate, including the completion and commencement of commercial operations at our exploration and production projects; the completion of announced mergers and acquisitions transactions; our liquidity and capital resources and expenditures; outcome and

consequences of any pending litigation proceedings; and our Project One performance targets. These forward-looking statements are not based on historical facts, but rather reflect our current expectations concerning future results and events and generally may be identified by the use of forward-looking words or phrases such as

S-iii

Table of Contents

believe , aim , expect , anticipate , intend , foresee , forecast , likely , should , planned , may , estimate , similar words and phrases. Similarly, statements that describe our objectives, plans or goals are or may be forward-looking statements.

These forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied by these forward-looking statements. Although we believe that the expectations reflected in these forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct.

The risk factors described herein could affect our future results, causing these results to differ materially from those expressed in any forward-looking statements. These factors are not necessarily all of the important factors that could cause our actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on the future results.

You should review carefully all information, including the financial statements and the notes to the financial statements, included in this prospectus supplement and all documents incorporated herein by reference. The forward-looking statements included in this prospectus supplement are made only as of the last practicable date and the forward-looking statements in the documents incorporated by reference are made only as of the last practicable date before the filing of such documents. We undertake no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of this prospectus supplement or to reflect the occurrence of unanticipated events. All subsequent written and oral forward-looking statements attributable to us or any person acting on our behalf are qualified by the cautionary statement in this section.

NOTICE TO UK INVESTORS

This prospectus supplement is for distribution only to persons who (i) have professional experience in matters relating to investments falling within Article 19(5) of the United Kingdom Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (as amended) (the Financial Promotion Order), (ii) are persons falling within Article 49(2)(a) to (d) of the Financial Promotion Order, being, among other things, high net worth companies and/or unincorporated associations, (iii) are outside the United Kingdom, or (iv) are persons to whom an invitation or inducement to engage in investment activity (within the meaning of section 21 of the United Kingdom Financial Services and Markets Act 2000 (as amended) (the FSMA) in connection with the issue or sale of any securities may otherwise lawfully be communicated or caused to be communicated (all such persons together being referred to as relevant persons). This prospectus supplement is directed only at relevant persons and must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this prospectus supplement relates is available only to relevant persons and will be engaged in only with relevant persons.

NOTICE TO EEA INVESTORS

This prospectus supplement has been prepared on the basis that any offer of securities in any Member State of the European Economic Area (EEA) which has implemented the Prospectus Directive (2003/71/EC) (each, a Relevant Member State) will be made pursuant to an exemption under the Prospectus Directive, as implemented in that Relevant Member State, from the requirement to publish a prospectus for offers of securities. Accordingly, any person making or intending to make any offer in that Relevant Member State of securities which are the subject of the offering contemplated in this prospectus supplement may only do so in circumstances in which no obligation arises for us or any of the underwriters to publish a prospectus pursuant to Article 3 of the Prospectus Directive or supplement a prospectus pursuant to Article 16 of the Prospectus Directive, in each case,

Table of Contents

in relation to such offer. Neither the Company, nor the underwriters have authorized, nor do they authorize, the making of any offer of securities in circumstances in which an obligation arises for the Company or any underwriter to publish or supplement a prospectus for such offer.

ENFORCEMENT OF CERTAIN CIVIL LIABILITIES

We are incorporated under the laws of South Africa. All except one of our directors and one of our officers, and the experts named herein, reside outside the United States, principally in South Africa. You may not be able, therefore, to effect service of process within the United States upon those directors and officers with respect to matters arising under the federal securities laws of the United States.

In addition, substantially all of our assets and the assets of our directors and officers are located outside the United States. As a result, you may not be able to enforce against us or our directors and officers judgments obtained in US courts predicated on the civil liability provisions of the federal securities laws of the United States.

We have been advised by Taback & Associates (Pty) Limited, our South African counsel, that there is doubt as to the enforceability in South Africa, in original actions or in actions for enforcement or judgments of US courts, of liabilities predicated on the US federal securities laws.

NON-GAAP FINANCIAL MEASURES

In this prospectus supplement and in documents incorporated by reference herein, we present financial items such as total cash costs , total cash costs per ounce , total production costs and total production costs per ounce that have been determined using industry standards promulgated by the Gold Institute and are not measures under US GAAP. An investor should not consider these items in isolation or as alternatives to any measure of financial performance presented in accordance with US GAAP either in this document or in any document incorporated by reference herein.

While the Gold Institute has provided definitions for the calculation of total cash costs , total cash costs per ounce , total production costs and total production costs per ounce , the definitions of certain non-GAAP financial measures included herein may vary significantly from those of other gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. However, we believe that total cash costs and total production costs in total by mine and per ounce by mine are useful indicators to investors and management of a mine s performance because they provide:

- an indication of a mine s profitability, efficiency and cash flows;
- the trend in costs as the mine matures over time on a consistent basis; and
- an internal benchmark of performance to allow for comparison against other mines, both within the AngloGold Ashanti group and of other gold mining companies.

INCORPORATION BY REFERENCE

The SEC allows us to incorporate by reference the information we submit to it, which means that we can disclose important information to you by referring you to certain documents filed with or furnished to the SEC that are considered part of this prospectus through incorporation by reference. Information that we file with or furnish to the SEC in the future and incorporate by reference will automatically update and supersede the previously filed or furnished information. We incorporate by reference the documents listed below and any future filings made with the SEC under Sections 13(a),

Table of Contents

13(c), 14, or 15(d) of the Exchange Act other than any portions of the respective filings that were furnished, under applicable SEC rules, rather than filed, until we complete our offering:

our annual report on Form 20-F for the year ended December 31, 2009 filed with the SEC on April 19, 2010, as amended by our Form 20-F/A filed with the SEC on May 18, 2010 (together, our 2009 Form 20-F);

our Form 6-K filed with the SEC on April 20, 2010 containing pro forma financial information for the year ended December 31, 2009 related to the sale of our 33.33% interest in the Boddington joint venture;

our Form 6-K filed with the SEC on August 11, 2010 containing our audited consolidated financial statements for the years ended December 31, 2007, 2008 and 2009 and as at December 31, 2008 and 2009, prepared in accordance with US GAAP, and related management's discussion and analysis of financial condition and results of operations (our 2009 US GAAP Results Release), which supersedes the statements in Item 5 and Item 18 of our 2009 Form 20-F and which you should review instead of such superseded statements in our 2009 Form 20-F; and

our Form 6-K filed with the SEC on September 7, 2010 containing unaudited condensed consolidated financial information as of June 30, 2010 and December 31, 2009 and for each of the six-month periods ended June 30, 2010 and 2009, prepared in accordance with US GAAP, and related management's discussion and analysis of financial condition and results of operation (our 2010 Second Quarter Report).

PROSPECTUS SUPPLEMENT SUMMARY

This summary highlights information contained elsewhere in this prospectus supplement and the documents incorporated by reference herein. This summary is not complete and does not contain all the information that may be important to you. Potential investors should read the entire prospectus supplement, the accompanying prospectus and the documents incorporated by reference herein and therein carefully, especially the risks of investing in our ordinary shares and ADSs discussed under Risk Factors .

Company Overview

We are a global gold company with a diversified portfolio of assets in many key gold producing regions. As at December 31, 2009, we had gold reserves of 68.3 million ounces. For the year ended December 31, 2009, we had consolidated revenues of \$3,784 million (which excludes revenue from by-products and interest earned), gold production of 4.6 million ounces and total cash costs of \$534 per ounce.

We were formed following the consolidation of the gold interests of Anglo American plc into a single company in 1998. At that time, our production and reserves were primarily located in South Africa (97% of 1997 production and 99% of reserves as at December 31, 1997) and one of our objectives was to achieve greater geographic and ore body diversity. Through a combination of mergers, acquisitions, disposal initiatives and organic growth, and through the operations in which we have an interest, we have developed a high quality, well diversified asset portfolio, including:

production from 20 operations in ten countries: Argentina, Australia, Brazil, Ghana, Guinea, Mali, Namibia, South Africa, Tanzania and the United States;

gold production and reserves for the year ended December 31, 2009 of 61% and 56%, respectively, from operations outside South Africa; and

gold production from a broad variety of ore body types as well as a variety of open-pit and heap-leach (42%), underground (54%) and surface and dump reclamation (4%) operations.

Our strategy in respect of this portfolio and our current strategic objectives are discussed below.

We were incorporated in the Republic of South Africa in 1944 under the name of Vaal Reefs Exploration and Mining Company Limited and in South Africa we are subject to the South African Companies Act 61 of 1973, as amended. Paragraph 2 of our memorandum and articles of association provides that our main business is to carry on gold exploration, the mining and production of gold, the manufacturing, marketing and selling of gold products and the development of markets for gold. On April 26, 2004, we acquired the entire issued share capital of Ashanti Goldfields Company Limited and changed our name to AngloGold Ashanti Limited. Our principal executive office is located at 76 Jeppe Street, Newtown, Johannesburg, 2001 (P.O. Box 62117, Marshalltown, 2107), South Africa (Telephone +27 11 637-6000). Our general website is at www.anglogoldashanti.com. Information contained in our website is not, and shall not be deemed to be, part of this prospectus supplement.

Strategy

Our business strategy has three principal elements:

managing the business;

portfolio optimization and capital deployment; and
growing the business.

S-1

Table of Contents

Managing the Business. We seek to enhance shareholder value by endeavoring to plan and implement operating strategies that identify optimal ore body capability, applying appropriate methods and design to ensure efficient operating performance, detailed planning and scheduling, together with the application of best practices across all aspects of the production and service activities associated with each asset. Successfully managing the business means delivering on our commitments, which includes seeking to:

ensure safe work practices and a healthy workforce (safety is our first value, which is reflected in all leadership behaviors and is the foundation on which we build all value-enhancing processes in our business);

increase and consistently generate returns on capital of above 15%;

meet production targets on time and within budget;

manage our costs and associated escalations (we intend to manage our input costs in order to maximize margins and returns on capital employed over the life cycle of each of our projects); and

maximize revenues, including by reducing our hedge book. See [Hedge Book Reduction](#) below.

We are in the process of implementing Project One, an initiative to introduce a common business process across all aspects of our operations. Project One is built upon two principal focus areas: the [System for People](#) and the [Business Process Framework](#). The System for People is a managerial effectiveness model designed to bring about effective working relationships based on trust and a culture of accountability at all levels of our organization, and the Business Process Framework is a rigorous model focused on short- and long-term planning and execution of work.

Project One underpins our efforts to achieve the following strategic goals in respect of our existing mines over the five-year period from 2009 to 2013:

a 70% reduction in accident rates;

a 30% improvement in overall productivity (in terms of ounces of gold produced per employee);

a 60% reduction in reportable environmental incidents;

a 20% increase in gold production;

a 25% reduction in real IFRS total cash costs per ounce; and

an increase in average return on capital to above 15%.

The Company-wide roll out of Project One continues, but it has already resulted in noticeable improvements in some of the operations where it was first implemented, particularly at our Geita mine in Tanzania (where Project One initiatives have resulted in approximately a 30% increase in plant throughput, approximately a 15% increase in truck fleet availability and approximately a 40% increase in plant recovery, since February 2009) and at our Mponeng mine in South Africa (increased plant throughput and improved recovery, which led to production for the first quarter of 2010 to exceed our production target by more than 10%).

The Project One performance objectives are to be measured against our performance in 2008 (except in the case of accident rates which is to be measured against the three-year average for the period 2006 to 2008). Achieving these

performance objectives will be impacted by any portfolio changes and is subject to a number of potentially offsetting factors and risks, uncertainties and other factors, some of which are beyond our control, any of which may prevent or delay us from achieving our stated goals. Certain of such risks, uncertainties and other factors are described in Risk Factors . See also Note Regarding Forward-Looking Statements .

Portfolio Optimization and Capital Deployment. We regularly review our portfolio of assets to ensure it meets or exceeds specified risk-adjusted rates of return. We also seek to enhance shareholder value by optimizing capital deployment.

S-2

Table of Contents

Portfolio Optimization. We analyze our portfolio on both an absolute basis and relative to other gold companies in our peer group. When conducting this analysis, we identify the strengths and weaknesses of our portfolio, with a particular focus on portfolio risk.

Optimizing Capital Deployment. We seek to allocate capital to leverage maximum value and returns from existing assets and growth opportunities. We review and rank internally each asset and project as part of the annual business planning process with the goal of most efficiently and effectively deploying capital across our existing assets. Assets that no longer meet our criteria may be targeted for sale, but only at attractive valuations.

Growing the Business. We seek to further enhance shareholder value by:

leveraging our current ground holdings and asset positions through greenfields exploration and brownfields exploration and development;

selectively pursuing merger and acquisition opportunities; and

maximizing the value of other commodities within our existing and developing asset portfolio.

Greenfields Exploration and Brownfields Exploration and Project Development. We prioritize organic growth through greenfields exploration, brownfields exploration and project development, leveraging our current ground holding and asset position as the most value-efficient path to growth.

During 2010, greenfields exploration activities are being undertaken in five regions: the Americas (including Canada and Colombia); Australia; Asia (including China and the Solomon Islands); Sub-Saharan; West and East Africa (including the Democratic Republic of Congo, or DRC, Gabon, Guinea and Tanzania) and the Middle East/North Africa (including Egypt and Eritrea).

Current key greenfields development initiatives approved or under consideration include the following projects:

Australia. The Tropicana joint venture, in which we hold a 70% interest, covers approximately 12,500 square kilometers and is located to the east and northeast of Kalgoorlie in Western Australia. Together with ongoing exploration, a pre-feasibility study was completed for Tropicana in the second quarter of 2009 and the favorable outcome of this study has resulted in a decision to proceed with a feasibility study which is scheduled for completion in the fourth quarter of 2010 when the partners will make an investment decision. In July 2010, the Western Australia Environmental Protection Agency released its report and recommendation on the project, and it is anticipated that the State and Federal ministers will announce their decisions by year-end. If the necessary regulatory and board approvals are obtained by the end of 2010, we expect that construction will start in early 2011 and gold production would begin in the first half of 2013. Finalization of capital and operating costs are in progress, and development of the implementation schedule and construction contracting strategies is underway. We have estimated that Tropicana would produce between 330,000 and 410,000 ounces per annum (70% of which is attributable to us) over its life. As part of the Tropicana project, scoping studies are expected to be completed in the second half of this year at both the Havana Deeps deposit and at the Boston Shaker deposit. The Havana Deeps prospect represents the potential higher grade underground extension of the Havana open-pit ore body which already forms part of the Tropicana project. The Boston Shaker deposit, located approximately 500 meters northeast of Tropicana, has now been defined over a 700-meter strike length, is open down dip and may be included in the Tropicana project. In addition to the Tropicana project, reconnaissance exploration drilling is also continuing in parallel within parts of the remaining 12,500 square kilometers area of the Tropicana joint venture.

Colombia. In Colombia, we have developed a 3 level participation model comprising our own exploration initiatives, exploration joint ventures with established players and equity positions in other exploration companies that are also active in Colombia. Our land holding position in Colombia, which includes tenements held and under application and including tenements held

S-3

Table of Contents

with our joint venture partners, is approximately 16,100 square kilometers. Principal exploration initiatives in Colombia include our wholly-owned La Colosa deposit as well as the Gramalote joint venture with B2Gold Corp. (in which we now own a 51% interest following our recent acquisition of an additional 2% interest from B2Gold Corp pursuant to the Gramalote joint venture agreement). On October 20, 2009, we received a resolution from the Ministry of the Environment and Territorial Development of Colombia, which allowed for initiation of exploration permitting procedures for La Colosa before the regional environmental authority, Cortolima. Drill preparation work and regional exploration (including mapping and sampling) is in progress and further exploration drilling as part of ongoing pre-feasibility studies commenced in August 2010. Also in August 2010, we entered into an amendment agreement to the Gramalote joint venture agreement with B2Gold Corp. pursuant to which we assumed operatorship of the Gramalote joint venture. See *Recent Developments Amendment of the Gramalote Joint Venture Agreement*. Feasibility studies and further exploration drilling will now commence at Gramalote in September 2010 and are planned to continue into 2011 and 2012 with the goal of completing a final feasibility study by the end of 2012.

DRC. After the findings of the DRC Mineral Review Commission were completed in February 2009, we engaged with the DRC government and L Office des Mines d Or de Kilo-Moto, or OKIMO (the DRC state gold mining company and shareholder with us in Ashanti Goldfields Kilo (AGK)). We negotiated a definitive joint venture agreement and supporting documentation with OKIMO for the development, in accordance with the DRC mining code, of the AGK project in which we hold an 86.22% interest, as well as the transfer of exploitation permits covering an area of 5,866 square kilometers as part of the original Concession 40 tenement to AGK. We entered into these agreements on March 20, 2010. Following the conclusion of these agreements, we, in partnership with OKIMO, are scheduled to complete a feasibility study at the Mongbwalu-Adidi project in the first quarter of 2011. A 20,000 meter combined drilling program is currently underway at Mongbwalu-Adidi and a further 5,000 meter program is planned for early phase drill-testing of regional targets within the broader 5,866 square kilometer area and is expected to commence during 2010. In addition to our 86.22% interest in AGK, we also hold a 45% interest in the Kibali gold project (45% held by Rangold Resources Limited and 10% by OKIMO) where, as at December 31, 2009, our 45% attributable share of the ore reserves of Kibali was 4.14 million ounces and where exploration and feasibility studies continue. An updated feasibility study, which will optimize the mining plan and the size of the plant, is on track for completion by the end of 2010. Pre-construction preparations have run ahead of schedule given positive interaction with local communities and rapid development of associated infrastructure allowing the start of construction to be brought-forward by six months to mid-2011. The project is on track to begin gold production in January 2014.

We intend to leverage our first mover positions in greenfields exploration, with the focus on building coherent regional portfolios, while continuing to access our land positions utilizing, where possible, the 3 level participation model as successfully implemented in Colombia.

Brownfields exploration, which is aimed at identifying ounces for production at or around existing mines, is being undertaken around all of our current operations. In 2009, the most successful brownfields exploration results from our existing programs were achieved in Guinea, Mali, South Africa and the United States. In the first six months of 2010, our most successful brownfields exploration results were achieved at Sunrise Dam in Australia, at our Siguiri mine in Guinea and in Brazil, particularly at Córrego do Sítio (including the Saõ Bento mine).

Current key brownfields development initiatives approved or under consideration include the following projects:

Mponeng Ventersdorp Contact Reef, or VCR, below 120 Level project (South Africa): Approved in February 2007, this project entails exploiting the VCR ore reserves located

Table of Contents

from 120 Level to 126 Level at Mponeng and is estimated to recover 2.7 million ounces of gold with first production scheduled for 2013 and full production in 2015.

Mponeng Carbon Leader Reef, or CLR, below 120 Level project (South Africa): A feasibility study is in progress to exploit the CLR ore reserves located below 120 Level at Mponeng. Estimates are that 14.7 million ounces of gold could be recovered from this project, which we expect will be developed in the medium term, with annual production of approximately 450,000 ounces.

Moab Khotsong phase II (Zaaiplaats) (South Africa): A feasibility study has been completed on the optimal extraction of the ore body within the lower mine area of Moab Khotsong which, if developed, will further extend the life of Moab Khotsong recovering an estimated 5.1 million ounces of gold with an average annual production of approximately 370,000 ounces. We expect that this project will be developed in the medium term with further underground exploration and some pre-development approved by our board of directors in August 2010 to commence in the second half of 2010.

Cerro Vanguardia (Argentina): The underground mining project at Cerro Vanguardia in Argentina will involve underground mining below seven of the deeper high-grade open pits that have been or are currently being mined by way of open-pit techniques. Underground mining is expected to be cheaper than open pit mining in these deeper pits. A feasibility study, including trial mining below one of the existing pits, is scheduled to be completed in the second half of 2010. If approved by our board of directors in the short term following the completion of the feasibility study, we expect that this project, which could produce 613,000 ounces of gold and 6.1 million ounces of silver over the anticipated life of the project, will be developed from early 2011. We may also consider similar underground production at other pits at Cerro Vanguardia in the future. In addition, a feasibility study for a heap leach project at Cerro Vanguardia, based on the treatment of low grade ore through a small heap leaching operation, was completed in 2009. The feasibility study indicated that Cerro Vanguardia's annual gold production could rise by an additional 20,000 ounces per annum through the employment of this process. The project was approved by our board of directors in February 2010 and production is scheduled to begin in the second quarter of 2011.

Córrego do Sítio (including the Saõ Bento mine) (Brazil): We acquired the former Saõ Bento property from Eldorado Gold Corporation in December 2008 and subsequently renamed it AngloGold Ashanti Córrego do Sítio Mineração. This acquisition resulted in the consolidation and doubling in size of the Córrego do Sítio project (Phase II), adding mineral potential and infrastructure. The project plan for Phase I of the project (which includes only the original Córrego do Sítio property) covers potential mining of the Cachorro Bravo, Laranjeiras and Carvoaria Velha ore bodies. The Córrego do Sítio Phase I feasibility study, which included an assessment of the metallurgical process for production of 140,000 ounces of gold annually and 1.9 million ounces over the life of the project, has been finalized and the project was approved by our board of directors in May 2010. Detailed engineering on the Córrego do Sítio project commenced immediately after the project was approved. Underground development is progressing on schedule and various environmental licenses have been obtained. The refurbishment and upgrade of the Saõ Bento plant (also part of the 2008 acquisition) is currently in process, while the contracts for the design and manufacture of the autoclaves have already been awarded. Production is expected to commence in early 2012.

Lamego (Brazil): A feasibility study for the Lamego project was approved by our board of directors in September 2009 and is currently being implemented. The planned ramp up in production at Lamego resulted in production of 18,000 ounces in 2009, with 33,000 ounces expected in 2010 and full production of 48,000 ounces expected in 2011. We estimate that Lamego will produce approximately 469,000 ounces

of gold over nine years.

S-5

Table of Contents

Nova Lima Sul (Brazil): The objective of this project is to mine a number of target areas in the vicinity of AngloGold Ashanti Brazil Mineração's current operations and process the ore utilizing idle capacity at AngloGold Ashanti Brazil Mineração's Queiroz processing plant. The project consists of three phases and a feasibility study for phase 1 of the project, which we estimate has the potential to produce approximately 880,000 ounces of gold, is expected to be completed in early 2011. If phase 1 is approved by our board of directors following completion of the feasibility study, development of this phase of the project will then commence. The feasibility studies for phases 2 and 3 of the project are expected to be completed by the end of 2013.

Obuasi and Obuasi Deeps (Ghana): Brownfields exploration and studies for the exploitation of the vast ore body below 50 Level at Obuasi continue, in addition to business improvement initiatives and other mine design and operating plans to establish sustained improvements in operational performance and efficiencies in existing operations above 50 level at Obuasi.

Sadiola Deeps (Mali): The objective of this project is to treat the hard sulphide ore from the main pit through a new plant in parallel with the current oxide plant thus increasing the overall processing capacity at Sadiola. Iamgold, our 41% partner in Sadiola, is currently managing a feasibility study for Sadiola Deeps, which is expected to be completed in late 2010.

Mine Life Extension projects at Cripple Creek & Victor, or CC&V (United States): The required permits have been granted from the State of Colorado and Teller County and construction has begun on the first mine life extension project at the Cripple Creek & Victor mine as approved by our board of directors in October 2008, which includes the development of new sources of ore and an extension to the existing heap-leach facility. This project has been accelerated and it is now scheduled to be commissioned by the end of 2010 and is expected to increase the mine life, resulting in the recovery of 1.4 million ounces of gold. In addition, development drilling continues to define areas of interest for which engineering analysis and permitting requirements are being evaluated in a feasibility study for a second mine life extension project at the Cripple Creek & Victor mine.

Mergers and Acquisitions. We continue to pursue value-accretive acquisition opportunities with a view to enhancing our ground-holding asset positions and our regional presence as well as achieving further growth in our business. Recent acquisitions have included transactions that have resulted in our acquisition of a 45% interest in the Kibali gold project (completed in August 2009 and December 2009) and the acquisition of an additional 3% interest in the Sadiola gold mine (completed in December 2009).

Other Commodities. We produce uranium, silver and sulfuric acid as byproducts of our existing gold production. We are increasing our uranium production with the upgrade of our existing uranium plant located at our Vaal River operations in South Africa, which is expected to be completed in 2012, as well as the ramp-up of gold production at Moab Khotsong (with a similar increase and ramp-up of uranium production from this mine).

Hedge Book Reduction

During 2009, we continued to execute our strategy to reduce our outstanding gold hedging position, which resulted in our decision to accelerate the settlement of certain outstanding gold hedging positions. These accelerated settlements, together with the normal scheduled deliveries and maturities of other gold derivatives positions during 2009 and the first half of 2010, reduced the total committed ounces from 5.99 million ounces as at December 31, 2008 to 3.22 million ounces as at June 30, 2010 and 2.72 million ounces as at September 14, 2010.

The majority of the gold derivative positions affected by the accelerated settlements during 2009 were previously designated as normal purchase and sale exempted, or NPSE , contracts, allowing

S-6

Table of Contents

them to be accounted for off balance sheet in prior periods. However, as a result of the accelerated cash settlement of certain of the NPSE contracts during 2009, the FASB Accounting Standards Codification, or ASC, guidance on derivatives and hedging led us to evaluate the continuing designation of, and accounting treatment for, the remaining NPSE contracts that were not part of the accelerated settlement. As we determined to continue to consider alternatives to reduce our outstanding gold derivatives position in future periods including, where appropriate, the accelerated settlement of contracts previously qualifying for the NPSE designation, management concluded, in accordance with the FASB ASC guidance, to re-designate all remaining NPSE contracts as non-hedge derivatives and to account for such contracts at fair value on the balance sheet with changes in fair value accounted for in the income statement each period. The income statement impact of the accelerated settlement and related re-designation of remaining NPSE contracts was \$797 million and \$556 million, respectively, which were incurred in 2009.

We estimate that our current residual hedging position would likely result in our realizing an effective discount to the gold spot price of approximately 6-11% until 2014 and an effective discount of less than 1% in 2015 if the hedge book were not restructured, assuming an annual production of 5.0 million ounces and a spot price of between \$950-\$1,450 per ounce. We believe that the outlook for the gold price remains robust, with strong physical and investment demand coupled with diminishing global mine supply. We have therefore decided to seek to accelerate the elimination of our residual gold hedging position and maximize our unhedged leverage to the spot gold price of our future gold production.

We intend to effectively eliminate all our remaining gold hedging positions by early 2011, market conditions permitting, including by procuring early settlement of existing contracts that mature in 2010 and beyond, or by purchasing off-setting derivatives, or both. We believe that this would have the following benefits:

We would be fully exposed from 2011 to the spot price of gold in what we expect to be a strong gold price environment.

We expect to realize higher profit margins and cash flows from 2011, as a result of the low committed prices under existing contracts that would be removed.

Our strategic position would be enhanced with a more robust capital structure to fund the growth initiatives described under Strategy Growing the Business above as a result of the expected improvement in profitability and cash flow. On a combined basis, we believe that these growth initiatives, which we estimate will require project capital expenditure (excluding stay in business and ore reserve development capital expenditure) of approximately \$2,450 million over the next three years, have the potential to add significantly to our ore reserves as well as the potential to increase our annual gold production from current levels. See Risk Factors Risks related to our results of operations and our financial condition as a result of factors specific to us and our operations We expect to have significant financing requirements.

Due to the low committed prices under our current hedge contracts (at an average price of less than \$450 per ounce) relative to the current market price, the elimination of our hedging arrangements will require a significant capital commitment and we expect that it would have a significant one-off negative impact on our financial statements during each period in which the restructuring of our hedges is implemented.

The exact nature, extent and execution of our gold hedge restructuring will depend upon the successful completion of this offering and the Mandatory Convertible Bonds Offering (as defined below), as well as prevailing and anticipated market conditions at the time of restructuring, particularly prevailing gold prices and exchange rates and other relevant economic factors. As at June 30, 2010, the negative marked-to-market value of all hedge transactions making up our hedge position was approximately \$2.41 billion.

This offering and the Mandatory Convertible Bonds Offering are together intended to raise sufficient funds, together with funds drawn from our existing credit facilities and cash on hand, to

S-7

Table of Contents

effectively eliminate our gold hedging position while maintaining a strong balance sheet to fund our development projects and exploration initiatives.

Concurrent Offering of Mandatory Convertible Bonds. Concurrently with this offering of ordinary shares and ADSs, under a separate prospectus supplement, AngloGold Ashanti Holdings Finance plc, or Holdings Finance, our indirect wholly-owned subsidiary, is offering \$686,162,400 aggregate principal amount (or \$789,086,750 aggregate principal amount if the underwriters of that offering exercise their over-allotment option with respect to that offering in full) of 6.00% mandatory convertible subordinated bonds due 2013 that will be fully and unconditionally guaranteed on a subordinated basis by AngloGold Ashanti (the *Mandatory Convertible Bonds*) in a public offering (the *Mandatory Convertible Bonds Offering*). The Mandatory Convertible Bonds will initially be convertible into a maximum of 15,773,913 ADSs (or a maximum of 18,140,000 ADSs in total if the underwriters in that offering exercise their over-allotment option with respect to that offering in full). Neither the completion of the Mandatory Convertible Bonds Offering nor the completion of this offering will be contingent on the completion of the other.

The Mandatory Convertible Bonds will mature on September 15, 2013, subject to postponement in limited circumstances due to certain market disruption events (the *stated maturity date*). Unless previously converted, the Mandatory Convertible Bonds will automatically convert on the stated maturity date (or upon acceleration following an event of default) into a number of ADSs based upon a specified conversion rate. The Mandatory Convertible Bonds will bear interest at an annual rate of 6.00% payable quarterly in arrears on March 15, June 15, September 15 and December 15 of each year, commencing on December 15, 2010. Holdings Finance has the right to defer interest payments on the Mandatory Convertible Bonds and to extend any deferral period at any time and from time to time; *provided* that interest may not be deferred beyond September 15, 2013.

On the stated maturity date, unless previously converted, each Mandatory Convertible Bond will automatically convert into a number of ADSs equal to the sum of the daily conversion amounts (as defined below) over a 20-consecutive trading day observation period beginning on the 25th scheduled trading day immediately preceding September 15, 2013.

The *daily conversion amount* for each trading day of the observation period will be calculated as follows:

- (i) if the daily volume weighted average price (*VWAP*) of our ADSs on such trading day is equal to or greater than approximately \$54.375 (the *threshold appreciation price*), then the daily conversion amount per bond will equal 1/20th of the minimum conversion rate;
- (ii) if the daily VWAP of our ADSs on such trading day is less than the threshold appreciation price but greater than approximately \$43.50 (the *initial price*), then the daily conversion amount per bond will equal \$2.50 divided by the daily VWAP on such trading day; and
- (iii) if the daily VWAP of our ADSs on such trading day is less than or equal to the initial price, then the daily conversion amount per bond will equal 1/20th of the maximum conversion rate.

Minimum conversion rate means 0.91954 (\$50.00 *divided by* the threshold appreciation price).

Maximum conversion rate means 1.14943 (\$50.00 *divided by* the initial price).

The minimum conversion rate, maximum conversion rate, threshold appreciation price and initial price are subject to standard anti-dilution adjustments.

The holders of the Mandatory Convertible Bonds may elect early conversion, in whole or in part, at any time from the earlier of (i) 90 calendar days following the first original issuance date of the bonds and (ii) the date on which our shareholders approve the issue by us of ordinary shares upon an exercise of conversion rights under the Mandatory Convertible Bonds (the approval date) until the

S-8

Table of Contents

25th scheduled trading day immediately preceding September 15, 2013 at the minimum conversion rate plus any deferred interest to, but excluding, the immediately preceding interest payment date.

Holdings Finance may convert the Mandatory Convertible Bonds, in whole but not in part, at any time after the approval date and on or before the 25th scheduled trading day immediately preceding September 15, 2013 at the maximum conversion rate plus a cash amount equal to accrued and unpaid interest (including any deferred interest) to, but excluding, the conversion date and the present value of all remaining interest payments.

Upon the occurrence of certain specified events constituting a fundamental change at any time after the initial issuance up to and including the 25th scheduled trading day immediately preceding September 15, 2013, holders of Mandatory Convertible Bonds will have the right to elect early conversion at a conversion rate designed to compensate the holders for the lost option value in connection with the fundamental change, plus a cash amount equal to accrued and unpaid interest (including any deferred interest) to, but excluding, the conversion date and the present value of all remaining interest payments.

The Mandatory Convertible Bonds are subject to automatic cash settlement until the approval date. In addition, after the approval date, if a fundamental change or conversion rate adjustment causes the maximum number of ADSs deliverable upon conversion of all then-outstanding Mandatory Convertible Bonds to exceed the number of ADSs that can be issued upon deposit of the ordinary shares we have reserved for such purpose, Holdings Finance will satisfy its obligations with respect to any subsequent conversion by delivering a combination of ADSs and a true-up cash amount.

Assuming no exercise of the over-allotment option with respect to the Mandatory Convertible Bonds Offering by the underwriters of that offering, we estimate that the net proceeds of the Mandatory Convertible Bonds Offering, after deducting the underwriting discount and estimated expenses, will be approximately \$662 million.

Recent Developments

Ghanaian Operational Issues. On February 19, 2010, we announced that processing operations had been suspended at our Iduapriem mine in Ghana pending the establishment of a temporary tailings storage facility at the mine. On March 30, 2010, we applied for a permit from the Environmental Protection Agency of Ghana, or EPA, for the construction of the tailings storage facility and, after having been suspended for ten weeks, gold production resumed at Iduapriem during April 2010. We are accelerating the establishment of a water treatment plant and a new tailings storage facility which we aim to commission in the third quarter of 2010 and early 2011, respectively.

On March 30, 2010, we announced that following suspension of the operation of gold processing at our Obuasi mine in Ghana pending the implementation of a revised water management strategy to reduce contaminants contained in its discharge, we had submitted details of the strategy to the EPA, the essence of which is to utilize existing infrastructure for the containment and treatment of water on site. With the support and guidance of the EPA, we intend to establish additional water holding and treatment facilities at Obuasi progressively over the 18-month period from April 2010. Gold processing at the mine has recommenced but the suspension of operations negatively impacted production in the second quarter of 2010 and future production through the end of 2010, and possibly to the end of the 18-month period from April 2010, will be negatively impacted while the additional water holding and treatment facilities are established. Production at Obuasi in the second quarter of 2010 was also negatively impacted by slower-than-anticipated development rates which limited mining flexibility. This could impact future production until development is sufficiently accelerated to establish a greater number of production stopes thereby offering greater mining flexibility which would allow higher production rates to be achieved, and sustained, at Obuasi. These initiatives form part of our ongoing technical restructuring and business improvement efforts at Obuasi, as part of Project One, to which we have deployed additional resources.

Table of Contents

Amendment of the Gramalote Joint Venture Agreement. On August 12, 2010, we announced that we had entered into an agreement with B2Gold Corp. to amend the Gramalote joint venture agreement, pursuant to which we will become the manager of the Gramalote project in Colombia in which we now have a 51% interest. The Gramalote project was previously managed by B2Gold Corp., which will retain its 49% interest in the Gramalote joint venture.

We have also agreed with B2Gold Corp. to a budget for the Gramalote project for the second half of 2010 and we plan to continue the exploration and feasibility work in 2011 and 2012, with the goal of completing a final feasibility study by the end of 2012. A further program and budget for exploration and feasibility work in 2011 is to be approved by the Gramalote joint venture's board of directors by the end of November 2010. We and B2Gold Corp. will fund our respective shares of expenditures *pro rata* to our shareholdings in the Gramalote joint venture.

Sale of Tau Lekoa Mine. On July 21, 2010, we announced that the Department of Mineral Resources had transferred the mining rights for the Tau Lekoa mine to Buffelsfontein Gold Mines Limited, a wholly-owned subsidiary of Simmer & Jack Mines Limited, or Simmers. Full ownership of Tau Lekoa and the adjacent properties of Weltevreden and Goedgenoeg passed to Simmers on August 1, 2010 for a total purchase consideration of:

R600 million payable at completion of the transaction, as R450 million in cash and the remaining R150 million in cash or shares in Simmers (such balance being subject to an offset adjustment (up to a maximum of R150 million) based on the free cash flow generated by Tau Lekoa between January 1, 2009 and July 31, 2010 and including an offset for the royalty payable from January 1, 2010 to June 30, 2010 (this balancing amount will be determined based upon a final audit of the July 2010 production figures)); and

a royalty determined at 3% of the net revenue (gross revenue less state royalties) generated by the Tau Lekoa mine and any operations developed at Weltevreden and Goedgenoeg. The royalty will be payable quarterly, from January 1, 2010, until the total production from Tau Lekoa, Weltevreden or Goedgenoeg upon which the royalty is paid is equal to 1.5 million ounces and provided that the average quarterly rand price of gold is equal to or exceeds R180,000/kg (in January 1, 2010 terms).

From August 1, 2010, Simmers began treating all ore produced from Tau Lekoa, Weltevreden or Goedgenoeg at its own processing facilities. As a result, we have increased processing capacity available allowing for the processing of additional material from our other Vaal River mines and surface sources, which is expected to produce an estimated 7,000 ounces of gold for the remainder of 2010, with gold production expected to continue into the foreseeable future. Tau Lekoa produced 124,000 ounces of gold (equivalent to 2.7% of group production) in 2009.

Revolving Credit Facility and Bond Financing. On April 20, 2010, AngloGold Ashanti Holdings plc and AngloGold Ashanti USA Inc., each a wholly-owned subsidiary of AngloGold Ashanti, as borrowers, and AngloGold Ashanti, as guarantor, entered into a \$1.0 billion four-year revolving credit facility with a syndicate of lenders to replace its existing \$1.15 billion syndicated facility. AngloGold Ashanti, AngloGold Ashanti Holdings plc and AngloGold Ashanti USA Inc. each guaranteed the obligations of the borrowers and other guarantors under the facility. Amounts may be repaid and reborrowed under the facility during its four-year term. Amounts outstanding under the facility bear interest at a margin of 1.75% over LIBOR for the first \$0.5 billion of drawings under the facility and at a margin of 2.00% over LIBOR for any drawings in excess of \$0.5 billion.

On April 28, 2010, AngloGold Ashanti completed an offering of \$1.0 billion of 10-year and 30-year unsecured notes. The offering consisted of \$700 million of 10-year unsecured notes at a coupon of 5.375% and \$300 million of 30-year unsecured notes at a coupon of 6.50%. The notes were issued by AngloGold Ashanti Holdings plc, a wholly-owned subsidiary of AngloGold Ashanti, and are fully and unconditionally guaranteed by AngloGold Ashanti.

Table of Contents

Appointment of Directors. Russel Edey resigned from our board of directors and as our chairman, effective May 7, 2010.

Tito Mboweni was appointed to our board of directors and as our chairman, effective June 1, 2010. Mr. Mboweni has a long record of public service. As Labor Minister from 1994 to 1998, Mr. Mboweni was the architect of South Africa's post-apartheid labor legislation which today continues to provide the basis for the mutually respectful labor relationships central to our operational approach in South Africa. Mr. Mboweni served as governor of the South African Reserve Bank from 1999 to November 2009. Mr. Mboweni has bachelor's and master's degrees in development economics.

Ferdinand (Fred) Ohene-Kena was appointed to our board of directors on June 1, 2010. Mr. Ohene-Kena is the former Ghanaian Minister of Mines and Energy and is currently a member of the Ghana Judicial Council, the Chairman of the Ghana Minerals Commission and a member of the President's Economic Advisory Council. Mr. Ohene-Kena holds a MSc in Engineering.

Rhidwaan Gasant was appointed to our board of directors on August 12, 2010 and is a member of our Audit and Corporate Governance Committee. Mr. Gasant is the former Chief Executive Officer of Energy Africa Limited and sits on the board of international companies in the MTN Group.

Production and Cost Outlook

For the third quarter of 2010, we expect gold production to be approximately 1.15 million ounces. During the third quarter, as in previous years, we will be impacted by the winter power tariff in South Africa and annual wage increases effective as of July 1, 2010. Unit cash costs under IFRS, which may differ from those under US GAAP, for the third quarter of 2010 are expected to be approximately 21% higher than in the third quarter of 2009 based on the following average exchange rate assumptions: \$1=R7.55, A\$1=\$0.87, \$1=BRL1.80 and \$1=Argentinean Pesos 3.95, and oil at \$75 per barrel. This excludes the potential power tariff increases in Ghana where tariff reviews are underway with negotiations to follow, as well as possible changes to the non-cash deferred stripping profile at Sunrise Dam based on the underground and open pit production mix. The local operating currencies, in particular the South African Rand, have strengthened in the months of August and September to date. Assuming that the South African Rand remains at an average of approximately R7.20=\$1.00 for the months of August and September and similar strength in other operating currencies, it would be expected to adversely impact the third-quarter unit cash costs under IFRS by approximately \$12 to \$15 per ounce.

For the full year, we expect gold production to be between 4.5 million to 4.7 million ounces. Unit cash costs under IFRS, which may differ from those under US GAAP, for the full year 2010 are expected to be approximately 21% higher than in 2009 based on the following exchange rate assumptions: \$1.00=R7.70, A\$1.00=\$0.93, \$1.00=BRL1.70 and \$1.00=Argentinean Pesos 3.90 and oil at \$75 per barrel. This excludes the potential power tariff increases in Ghana where tariff reviews are underway with negotiations to follow, as well as possible changes to the non-cash deferred stripping profile at Sunrise Dam based on the underground and open pit production mix.

Our production and cost outlooks are subject to, among other things, unplanned stoppages due to safety-related interventions and potential strike actions, as well as any adverse production impact at Obuasi while additional water holding and treatment facilities are established and as a result of reduced mining flexibility until development rates increase and further production stopes are established. In addition, in light of recent volatility in foreign exchange rates and the sensitivity of our cash costs to foreign exchange rates, our outlook on cash costs should be regarded as indicative. See Risk Factors and Note Regarding Forward-Looking Statements .

Table of Contents**Summary Operating Data**

In accordance with the preferred position of the SEC, based on the estimated average of gold price and average exchange rates \$1.00=ZAR7.90 and A\$1.00=\$0.82 for the three years ended December 31, 2009, which yields a gold price of around \$840 per ounce, our proved and probable ore reserves have been determined to be 68.3 million ounces as at December 31, 2009. During the course of 2009, consistent with our intention to audit the ore reserves at all of our operations on the basis that the ore reserves at all operations are reviewed over any three-year period, we conducted a detailed audit of the geological models used as the basis for our reported reserves in respect of ten of our operations. The audit identified no material shortcomings in the process by which our geological models are estimated. The audit of ore reserves for those operations selected for review during 2010 is currently in progress.

Presented in the table below are selected operating data for us for each of the three years ended December 31, 2007, 2008 and 2009 and the six months ended June 30, 2009 and 2010, which are unaudited except as noted.

	Year Ended December 31,			Six Months Ended	
	2007	2008	2009	June 30, 2009	2010
Total attributable gold production (000 ounces) ⁽¹⁾	5,477	4,982	4,599	2,230	2,205
Total cash costs (\$ per ounce) ⁽¹⁾⁽²⁾	367	465	534	n/a	n/a
Total production costs (\$ per ounce) ⁽¹⁾⁽²⁾	504	592	683	n/a	n/a
Production costs (\$ million)	1,917 ⁽³⁾	2,159 ⁽³⁾	2,229 ⁽³⁾	955	1,196
Capital expenditure (\$ million) ⁽¹⁾	1,059	1,239	1,027	502	397

(1) Including equity accounted joint ventures for management reporting purposes.

(2) Total cash costs per ounce and total production costs per ounce have been determined using industry standards promulgated by the Gold Institute and are not measures under US GAAP. We believe that total cash costs and total production costs per ounce, expressed in the aggregate or on a mine-by-mine basis, are useful indicators to investors and management of a mine's performance because they provide:

an indication of profitability, efficiency and cash flows;

the trend in costs as the mining operations mature over time on a consistent basis; and

an internal benchmark of performance to allow for comparison against other mines, both within our group and of other gold mining companies.

However, an investor should not consider these items in isolation or as alternatives to any measure of financial performance presented in accordance with US GAAP either in this document or in any document incorporated by reference herein.

A reconciliation of total cash costs per ounce and total production costs per ounce to production costs in accordance with US GAAP for the years ended December 31, 2007, 2008 and 2009 is presented in Reconciliation of Total Cash Costs and Total Production Costs to Financial Statements .

(3) Audited.

For additional operating data for us for each of the three years ended December 31, 2007, 2008 and 2009, please refer to Item 4 of our 2009 Form 20-F, which is incorporated by reference in this prospectus supplement.

- (1) Includes the acquisition of 15% minority interest acquired in the Iduapriem and Terebie mine with effect from September 1, 2007.
- (2) 2008 results include the acquisition of the remaining 33% shareholding in the Cripple Creek & Victor Gold Mining Company with effect from July 1, 2008. In prior years, the investment was consolidated as a subsidiary. The 2008 treatment is therefore consistent with that of prior years.
- (3) Product sales represent revenue from the sale of gold.
- (4) Operating costs include production costs, exploration costs, related party transactions, general and administrative, market development costs, research and development, employment severance costs and other.
- (5) The calculations of basic and diluted loss per ordinary share are described in note 9 to our consolidated financial statements included in our 2009 US GAAP Results Release. Amounts reflected exclude E ordinary shares.
- (6) Includes noncontrolling interests.

For further information regarding footnotes (1) and (2) see Item 4A. History and Development of the Company in our 2009 Form 20-F.

Table of Contents**SUMMARY OF THE OFFERING**

We are offering an aggregate of 15,773,914 of our ordinary shares, whether in the form of ordinary shares or ADSs and have granted the underwriters an option to purchase up to 2,366,086 additional ordinary shares, in the form of ordinary shares or ADSs, to cover over-allotments, if any. The public offering price per ordinary share is ZAR 308.37 and the public offering price per ADS is \$43.50.

The following sets forth the expected proceeds of the offering to us before expenses:

	Per ADS	Total⁽¹⁾⁽²⁾
Initial price to investors	\$ 43.50	\$ 686,165,259
Underwriting discount	\$ 0.87	\$ 13,723,305
Proceeds, before expenses, to us	\$ 42.63	\$ 672,441,954

(1) Assuming all ordinary shares offered hereby are sold in the form of ADSs.

(2) Assuming the underwriters do not exercise their over-allotment option.

The CUSIP number for the ordinary shares is 035128206.

Delivery of the ordinary shares is expected to occur on September 22, 2010.

We intend to use the net proceeds from this offering and the net proceeds from the Mandatory Convertible Bonds Offering, together with funds drawn from our existing credit facilities and cash on hand, to effectively eliminate our gold hedging position while maintaining a strong balance sheet to fund our development projects and exploration initiatives, as described under Hedge Book Reduction and Strategy Growing the Business, respectively.

We have agreed with the underwriters not to offer or sell any of our ordinary shares and securities that are substantially similar to our ordinary shares, including any securities that are convertible or exchangeable into our ordinary shares, and not to engage in certain swaps transactions, for a period of 90 days after the date of this prospectus supplement (subject to certain exceptions) as set forth in the section under the caption

Underwriting/Conflicts of Interest on page S-50.

The ordinary shares referred to herein have not been registered with any state or national securities regulator in any country (including the Republic of South Africa or the United Kingdom) other than the United States. Investors outside the United States should note the selling restrictions listed on pages S-53 to S-56 and act accordingly.

Delayed Settlement Cycle

The underwriters expect that delivery of the ordinary shares (including in the form of ADSs) will be made against payment therefore on the settlement date specified on the cover page of this prospectus supplement, which will be the fifth business day following the pricing date of the offering (this settlement cycle being referred to as T+5). Under Rule 15c6-1 under the Securities and Exchange Act of 1934, as amended, trades in the secondary market generally are required to settle in three business days, unless the parties to any such trade expressly agree otherwise. Accordingly,

purchasers who wish to trade ordinary shares (including in the form of ADSs) on the pricing date or the immediately following business day will be required, by virtue of the fact that the ordinary shares (including in the form of ADSs) initially will settle on a delayed basis, to agree to a delayed settlement cycle at the time of any such trade to prevent a failed settlement and should consult their own advisors.

Conflicts of Interest

As described in [Use of Proceeds](#) , the net proceeds from this offering, together with certain other funds, will be used to effectively eliminate our gold hedging position, as described under [Prospectus Supplement Summary Hedge Book Reduction](#) . Because more than 5% of the net proceeds from this offering, not including underwriting compensation, may be received by an underwriter of this offering or its affiliates, this offering is being conducted in compliance with National Association of Securities Dealers, Inc. (NASD) Rule 2720, as administered by the Financial Industry Regulatory Authority, Inc. (FINRA). Pursuant to that rule, the appointment of a qualified independent underwriter is not necessary in connection with this offering, as this offering is of securities for which there are respective bona fide public markets. See [Underwriting/Conflicts of Interest](#) .

Table of Contents

RISK FACTORS

This section describes some of the risks that could materially affect an investment in the ordinary shares and ADSs being offered. You should read these risk factors in conjunction with the detailed discussion of risk factors starting on page 16 in our 2009 Form 20-F, and those identified in our future filings with the SEC, incorporated herein by reference. Additional risk factors not presently known to us or that we currently deem immaterial may also impair our business operations.

Risks related to our results of operations and our financial condition as a result of factors that impact the gold mining industry generally

Commodity market price fluctuations could adversely affect the profitability of our operations.

Our revenues are primarily derived from the sale of gold and, to a lesser extent, uranium, silver and sulphuric acid. The market prices for these commodities fluctuate widely. These fluctuations are caused by numerous factors beyond our control. For example, the market price of gold may fluctuate for a variety of reasons, including:

- speculative positions taken by investors or traders in gold;
- changes in the demand for gold as an investment;
- changes in the demand for gold used in jewellery and for other industrial uses, including as a result of prevailing economic conditions;
- changes in the supply of gold from production, disinvestment, scrap and hedging;
- financial market expectations regarding the rate of inflation;
- strength of the US dollar (the currency in which the gold price trades internationally) relative to other currencies;
- changes in interest rates;
- actual or expected sales or purchases of gold by central banks and the International Monetary Fund;
- gold hedging and de-hedging by gold producers;
- global or regional political or economic events; and
- the cost of gold production in major gold producing countries.

The market price of gold has recently experienced significant volatility. During 2009, the gold price traded from a high of \$1,226.10 per ounce to a low of \$801.65 per ounce. On September 13, 2010, the afternoon fixing price of gold on the London Bullion Market was \$1,243.75 per ounce.

The price of gold is often subject to sharp, short-term changes resulting from speculative activities. While the overall supply of and demand for gold can affect its market price, because of the considerable size of above-ground stocks of

the metal in comparison to other commodities, these factors typically do not affect the gold price in the same manner or degree that the supply of and demand for other commodities tends to affect their market price. In addition, the recent shift in gold demand from physical demand to investment and speculative demand may exacerbate the volatility of gold prices.

A sustained period of significant gold price volatility may adversely affect our ability to evaluate the feasibility of undertaking new capital projects or continuing existing operations or to make other long-term strategic decisions.

If revenue from gold sales falls below the cost of production for an extended period, we may experience losses and be forced to curtail or suspend some or all of our capital projects or existing

S-16

Table of Contents

operations, particularly those operations having operating costs that are flexible to such short- to medium-term curtailment or closure, or change our dividend payment policies. In addition, we would have to assess the economic impact of low gold prices on our ability to recover any losses that may be incurred during that period and on our ability to maintain adequate cash reserves.

Foreign exchange fluctuations could have a material adverse effect on our operational results and financial condition.

Gold is principally a dollar-priced commodity, and most of our revenues are realized in, or linked to, dollars while production costs are largely incurred in the local currency where the relevant operation is located. As a result of our global operations and local foreign exchange regulations, some of our funds are held in local currencies, such as the South African rand and the Australian dollar. The weakening of the dollar, without a corresponding increase in the dollar price of gold against these local currencies, results in lower revenues and higher production costs in dollar terms. Conversely, the strengthening of the dollar, without a corresponding decrease in the dollar price of gold against these local currencies, yields significantly higher revenues and lower production costs in dollar terms. Exchange rate movements may have a material effect on our operating results. For example, a 1% strengthening of the South African rand, Brazilian real, the Argentinean peso and the Australian dollar against the US dollar will, other factors remaining equal, result in an increase in total cash costs under IFRS of nearly \$5 per ounce or approximately 1% of our total cash costs. The impact on cash costs determined under US GAAP may be different.

The profitability of our operations, and the cash flows generated by these operations, are significantly affected by fluctuations in input production prices, many of which are linked to the prices of oil and steel.

Fuel, energy and consumables, including diesel, heavy fuel oil, chemical reagents, explosives, tires, steel and mining equipment consumed in mining operations form a relatively large part of the operating costs and/or capital expenditures of any mining company. We have no influence over the cost of these consumables, many of which are linked to some degree to the price of oil and steel.

The price of oil has recently been volatile, reaching a high of \$88.37 per barrel and a low of \$65.99 per barrel in the first half of 2010 as compared to an all-time high oil price of \$145.11 per barrel on July 11, 2008. We have estimated that for each \$1 per barrel rise in the oil price, other factors remaining equal, the average cash costs under IFRS of all our operations increases by about \$0.50 per ounce with the cash costs of certain of our mines, particularly Geita, Cripple Creek & Victor, Siguiri and Sadiola, which, being more dependent on fuel, are more sensitive to changes in the price of oil. Furthermore, the price of steel which is used in the manufacture of most forms of fixed and mobile mining equipment is also a relatively large contributor to the operating costs and capital expenditure of a mining company and has also been volatile recently. For example, the price of flat HRC (North American Domestic FOB) steel reached a high of \$763 per ton and a low of \$639 per ton in the first half of 2010 as compared to an all time high price of \$1,240 per ton during May 2008.

Fluctuations in the price of oil and steel have a significant impact upon operating cost and capital expenditure estimates and, in the absence of other economic fluctuations, could result in significant changes in the total expenditure estimates for new mining projects or render certain projects non-viable.

Energy cost increases, and power fluctuations and stoppages, could adversely affect our results of operations and our financial condition.

Our mining operations are dependent upon electrical power generated by local utilities or by power plants situated at some of our operations.

In South Africa, our operations are substantially dependent on electricity supplied by Eskom, the state-owned utility. Eskom and the National Energy Regulator of South Africa, or the NERSA, continue to recognize the need for new supply capacity and a series of tariff increases and proposals have

S-17

Table of Contents

been tabled. In the third quarter of 2009, Eskom applied to NERSA for a tariff review to obtain an additional 45% increase annually for the next three years, which was later reduced to 35% annually for three years. On February 24, 2010, NERSA approved an increase of about 25% per year for three years and as energy prices represent a large portion of our operating costs in South Africa, the resulting increases are having an adverse impact on the cash costs of our South African operations.

In addition, generating capacity was severely impaired in early 2008 when Eskom warned that it could no longer guarantee the availability of its supply of electrical power to the South African mining industry. Consequently, we, along with other mining companies with South African operations, were forced temporarily to suspend mining operations at our South African mines. We have since implemented various initiatives at our South African mines to reduce our electrical power demand. As a result of these initiatives, our South African mines continue to work at full capacity while drawing approximately 85% of the power consumption that we drew prior to 2008. We cannot give assurance that power supply to our South African operations will not experience future interruptions as the South African economic situation further improves, thereby potentially increasing the demand on the national grid system in South Africa.

In Ghana, our operations depend on hydroelectric power supplied by the Volta River Authority, or the VRA, an entity controlled by the government of Ghana which is supplemented by thermal power from the Takoradi plant as well as the smaller unit recently commissioned at Tema. The VRA's principal electricity generating facility is the Akosombo Dam and during periods of below average inflows from the Volta reservoir, electricity supplies from the Akosombo Dam may be curtailed, as occurred in 1998, 2006 and the first half of 2007. In addition, during periods of limited electricity availability, the national power system is subject to system disturbances and voltage fluctuations, which can damage our equipment. The VRA has in the past also obtained power from neighboring Côte d'Ivoire, which has intermittently experienced some political instability and civil unrest.

From January 2009, and after negotiation, Ghana increased electricity charges at Obuasi from 9.2 to 9.3 US cents per kilowatt hour and at Iduapriem from 9.2 to 10.2 US cents per kilowatt hour. Even though these rates are expected to remain at these levels in the short term, they could be impacted by any significant spike in the crude oil price given the country's dependence on light crude oil for firing the thermal power plants. The power tariffs in Ghana are currently under review. If this review and related negotiations are concluded resulting in an increase in these power tariffs, this could have a negative impact upon the operating costs and cash flow of our Ghanaian operations.

Our mining operations in Guinea, Tanzania and Mali are dependent on power supplied by outside contractors and supplies of fuel being delivered by road. Our power supply has been disrupted in the past and we have suffered resulting production losses as a result of equipment failure.

Global economic conditions could adversely affect the profitability of our operations.

Our operations and performance depend significantly on worldwide economic conditions. During 2009, following the global financial crisis that had severe negative impacts upon banking systems, financial institutions and financial and credit markets, general economic indicators continued to deteriorate, including declining consumer sentiment and business confidence, increased unemployment, reduced levels of capital expenditure, ongoing disruption in financial and credit markets and uncertainty regarding corporate earnings. In recent months, certain indices and economic data have shown some signs of improvement and stabilization. However, there can be no assurance that these improvements will be broad-based or sustainable and how they will affect the markets relevant for us remains uncertain.

A continuation of the global economic downturn may have follow-on effects on our business. For example:

the insolvency of key suppliers could result in a supply chain break-down;

S-18

Table of Contents

the failure or potential failure of hedging and derivative counterparts and other financial institutions may negatively impact our results of operations and our financial condition;

other income and expense could vary materially from expectations depending on gains or losses realized on the sale or exchange of financial instruments and impairment charges may be incurred with respect to our investments;

other amounts realized in the future on our financial instruments could differ significantly from the fair values currently assigned to them;

our defined benefit pension fund may not achieve expected returns on its investments, which could require us to make substantial cash payments to fund any resulting deficits; and

the reduced availability of credit may make it more difficult for us to obtain, or may increase the cost of obtaining, finance for our operations.

In addition, uncertainty regarding global economic conditions may also increase the volatility or negatively impact the value of the market value of our securities.

Inflation may have a material adverse effect on our operational results.

Most of our operations are located in countries that have experienced high rates of inflation during certain periods.

Since we are unable to influence the market price at which we sell gold it is possible that significantly higher future inflation in the countries in which we operate may result in an increase in future operational costs in local currencies (without a concurrent devaluation of the local currency of operations against the dollar or an increase in the dollar price of gold). This could have a material adverse effect upon our results of operations and our financial condition.

While none of our operations are currently materially adversely affected by inflation, significantly higher and sustained inflation in the future, with a consequent increase in operational costs, could result in operations being reduced or rationalized at higher cost mines.

We face many risks related to the development of our mining projects that may adversely affect our results of operations and profitability.

The profitability of mining companies depends, in part, on the actual costs of developing and operating mines, which may differ significantly from estimates determined at the time a relevant mining project was approved following the completion of the relevant feasibility studies. The development of mining projects may also be subject to unexpected problems and delays that could increase the cost of development and the ultimate operating cost of the relevant project.

Our decision to develop a mineral property is typically based, in the case of an extension or, in the case of a new development, on the results of a feasibility study. Feasibility studies estimate the expected or anticipated project economic returns. These estimates are based on assumptions regarding:

future gold, other metal and uranium prices;

future foreign currency exchange rates;

anticipated tonnage, grades and metallurgical characteristics of ore to be mined and processed;
anticipated recovery rates of gold, uranium, silver and other metals extracted from the ore;
anticipated capital expenditure and cash operating costs; and
the required return on investment.

S-19

Table of Contents

Actual cash operating costs, production and economic returns may differ significantly from those anticipated by such studies and estimates. Operating costs and capital expenditure are driven to a significant extent by the costs of the commodity inputs, including the cost of fuel, chemical reagents, explosives, tires and steel, consumed in mining activities and credits from byproducts, such as silver and uranium.

There are a number of uncertainties inherent in the development and construction of an extension to an existing mine, or in the development and construction of any new mine. In addition to those discussed above, these uncertainties include:

timing and cost of the construction of mining and processing facilities, which can be considerable;

availability and cost of skilled labor, power, water and transportation facilities;

availability and cost of appropriate smelting and refining arrangements;

need to obtain necessary environmental and other governmental permits and the time to obtain such permits; and

availability of funds to finance construction and development activities.

The cost, timing and complexities of mine development and construction can increase because of the remote location of many mining properties. New mining operations could experience unexpected problems and delays during development, construction and mine start-up. In addition, delays in the commencement of mineral production could occur. Finally, operating cost and capital expenditure estimates could fluctuate considerably as a result of changes in the prices of commodities consumed in the construction and operation of mining projects.

Accordingly, our future development activities may not result in the expansion or replacement of current production with new production, or one or more new production sites or facilities may be less profitable than currently anticipated or may not be profitable at all. Our operating results and financial conditions are directly related to the success of our project developments. A failure in our ability to develop and operate mining projects in accordance with, or in excess of, expectations could negatively affect our results of operations and our financial condition and prospects.

We face uncertainty and risks in our exploration, feasibility studies and other project evaluation activities.

Exploration activities are speculative in nature and feasibility studies and other project evaluation activities necessary to determine whether a viable mining operation exists or can be developed are often unproductive. These activities also often require substantial expenditure to establish the presence, and to quantify the extent and grades (metal content), of mineralized material through exploration drilling. We undertake feasibility studies to estimate the technical and economic viability of mining projects, including the determination of appropriate mining methods and metallurgical recovery processes to mine and extract gold from the ore. These activities are undertaken in order to estimate the ore reserve.

Once mineralization is discovered it can take several years to determine whether adequate ore reserves exist. During this time, the economic feasibility of production may change owing to fluctuations in factors that affect revenue, as well as cash and other operating costs, including:

future metal and other commodity prices;

future foreign currency exchange rates; and

the required return on investment as based upon the costs and availability of capital.

S-20

Table of Contents

Feasibility studies also include activities to estimate:

anticipated tonnage, grades and metallurgical characteristics of the ore to be mined and processed;

anticipated recovery rates of gold, uranium and other metals from the ore; and

anticipated capital expenditure and cash operating costs.

These estimates depend upon the data available and the assumptions made at the time the relevant estimate is made. Ore reserve estimates are not precise calculations and depend on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. Further exploration and feasibility studies can result in new data becoming available that may change previous ore reserve estimates which will impact upon both the technical and economic viability of production from the relevant mining project. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves resulting in revisions to previous ore reserve estimates. These revisions could impact depreciation and amortization rates, asset-carrying values provisions for closedown, restoration and environmental clean-up costs.

We undertake annual revisions to our ore reserve estimates based upon actual exploration and production results, depletion, new information on geology and fluctuations in production, operating and other costs and economic assumptions. These factors may result in reductions in our ore reserve estimates, which could adversely affect the life-of-mine plans and consequently the total value of our mining asset base. Ore reserve restatements could negatively affect our results, financial condition and prospects, as well as our reputation.

The increased demand for gold and other commodities, combined with a declining rate of discovery, has resulted in existing reserves being depleted at an accelerated rate in recent years. We therefore face intense competition for the acquisition of attractive mining properties. From time to time, we evaluate the acquisition of ore reserve, development properties and operating mines, either as stand-alone assets or as part of companies. Our decisions to acquire these properties have historically been based on a variety of factors including historical operating results, estimates of and assumptions regarding the extent of ore reserve, cash and other operating costs, gold prices and projected economic returns and evaluations of existing or potential liabilities associated with the relevant property and our operations and how these factors may change in the future. Other than historical operating results, all of these factors are uncertain and could have an impact upon revenue, cash and other operating issues, as well as the uncertainties related to the process used to estimate ore reserve.

As a result of these uncertainties, the exploration programs and acquisitions engaged in by us may not result in the expansion or replacement of the current production with new ore reserve or operations. Our operating results and financial condition are directly related to the success of our exploration and acquisition efforts and our ability to replace or increase existing ore reserve. If we are not able to maintain or increase our reserves, our results of operations and our financial condition and prospects could be adversely affected.

We face many risks related to our operations that may adversely affect our cash flows and overall profitability.

Gold mining is susceptible to numerous events that may have an adverse impact on a mining business, our ability to produce gold and meet our production targets. These events include, but are not limited to:

environmental hazards, including discharge of metals, pollutants or hazardous chemicals; industrial accidents;

underground fires;

Table of Contents

labor disputes;

activities of illegal or artisanal miners;

mechanical breakdowns;

electrical power interruptions;

encountering unexpected geological formations;

unanticipated ground conditions;

ingresses of water;

process water shortages;

unanticipated increases in gold lock-up and inventory levels at heap-leach operations;

fall-of-ground accidents in underground operations;

failure of mining pit slopes, heap-leach facilities, water dams, waste stockpiles and tailings dam walls;

legal and regulatory restrictions and changes to such restrictions;

safety-related stoppages;

seismic activity; and

other natural phenomena, such as floods, droughts or inclement weather conditions, potentially exacerbated by climate change.

Seismic activity is of particular concern in underground mining operations, particularly in South Africa due to the extent and extreme depth of mining, and also in Australia and Brazil due to the depth of mining and residual tectonic stresses. For example, seismic activity at Savuka in 2009 led to damage to the shaft infrastructure, which contributed to a decline in production in 2009 and production is currently suspended pending consideration of the best way to access the ore body. Despite the implementation of technology and modifications to mine layouts and support technology with a view to minimizing the incidence and impact of seismic activity, seismic events have in the past, and may in the future, cause the death of, or injury to, employees and contractors.

Seismic activity may also cause the loss of mining equipment, damage to, or destruction of, mineral properties or production facilities, monetary losses, environmental damage and potential legal liabilities in South Africa and elsewhere where seismic activity may be a factor. As a result, these events may have a material adverse effect on our results of operations and our financial condition.

We are subject to extensive health and safety laws and regulations.

Gold mining operations are subject to a variety of industry-specific health and safety laws and regulations depending upon the jurisdiction in which they are located. These laws and regulations are designed to improve and to protect the

safety and health of employees.

From time to time, new health and safety laws and regulations, or amendments to existing health and safety laws and regulations, are introduced in the jurisdictions in which we operate. Should compliance with new standards require a material increase in expenditure or material interruptions to our operations or production, including as a result of any temporary failure to comply with applicable regulations, our results of operations and our financial condition could be adversely affected. For example, in South Africa the government has introduced compulsory shutdowns of operations to enable investigations into the cause of accidents that have occurred at those operations and certain of our operations have been temporarily suspended for this reason in the past.

S-22

Table of Contents

In addition, our reputation as a responsible company and employer could be damaged by any significant governmental investigation or enforcement of health and safety standards. Any of these factors could have a material adverse effect on our results of operations and financial condition.

Mining companies are increasingly required to consider and ensure the sustainable development of, and provide benefits to, the communities and countries in which they operate, and are subject to extensive environmental laws and regulations.

As a result of public concern about the perceived ill effects of economic globalization, business generally and large multinational corporations, such as AngloGold Ashanti, in particular, face increasing public scrutiny of their activities.

These businesses are under pressure to demonstrate that, as they seek to generate satisfactory returns on investment to shareholders, other stakeholders, including employees, communities surrounding operations and the countries in which they operate, benefit and will continue to benefit from their commercial activities. Such pressures tend to be particularly focused on companies whose activities are perceived to have a high impact on their social and physical environment. The potential consequences of these pressures include reputational damage, legal suits and social spending obligations.

The location of existing and proposed mining operations often coincides with the location of existing towns and villages, natural water courses and other infrastructure. Mining operations must therefore be designed to minimize their impact on such communities and the environment, either by changing mining plans to avoid any such impact, modifying mining plans and operations, or relocating the relevant people to an agreed location. These measures may include agreed levels of compensation for any adverse impact the mining operation may continue to have upon the community. The cost of these measures could increase capital and operating costs and therefore could have an adverse impact upon our results of operations.

We are subject to the above factors at certain of our existing and proposed mining sites and at all of our exploration sites.

Mining companies are also subject to extensive environmental laws and regulations in the various jurisdictions in which they operate. These regulations establish limits and conditions on producers' ability to conduct their operations. The cost of our compliance with environmental laws and regulations has been, and is expected to continue to be, significant.

Environmental laws and regulations are continually changing and are generally becoming more restrictive. If our environmental compliance obligations alter as a result of changes in laws and regulations, or in certain assumptions we make to estimate liabilities, or if unanticipated conditions arise at our operations, including any temporary failure to comply with regulations, standards or operating procedures requiring our operations to be suspended, our expenses and provisions would increase and our rate of production and revenue could be adversely impacted. If material, these expenses and provisions could adversely affect our results of operations and our financial condition.

Mining companies are required by law to close their operations, and rehabilitate the lands that they mine, at the end of the life of the mine. Estimates of the total ultimate closure and rehabilitation costs for gold mining operations are significant and based principally on current legal and regulatory requirements that may change materially. Environmental liabilities are accrued when they become known, probable and can be reasonably estimated. Increasingly, regulators are seeking security in the form of cash collateral or bank guarantees in respect of environmental obligations, which could have an adverse effect on our financial condition.

Costs associated with rehabilitating land disturbed by the mining processes and addressing the environmental, health and community issues are estimated and financial provision made based upon information available currently. Estimates may however be insufficient and further costs may be

S-23

Table of Contents

identified at any stage. Any underestimated or unidentified rehabilitation costs would reduce earnings and could materially and adversely affect our asset values, earnings and cash flows.

Compliance with emerging climate change regulation could result in significant costs to us, and climate change may present physical risks to our operations.

Greenhouse gases, or GHGs, are emitted directly by our operations and indirectly as a result of the consumption of electricity purchased from external utilities. Emissions from electricity consumption are indirectly attributable to our operations. Currently, a number of international and national measures to address or limit GHG emissions, including the Kyoto Protocol and the Copenhagen Accord, are in various phases of discussion or implementation in the countries in which we operate. These measures could result in requirements for us to reduce our direct and indirect GHG emissions. For example:

Currently, the Australian parliament is debating the introduction of the Carbon Pollution Reduction Scheme, which would cap national emissions and require certain companies whose emissions exceed the agreed threshold to obtain allowances to emit GHGs. We may be required under this scheme to purchase allowances for emissions starting in 2011. We are already required to report our GHG emissions to the Australian government under the National Greenhouse and Energy Reporting Act;

The South African government has announced a climate change policy process culminating in the publication of a white paper in 2011, with GHG legislation likely to be enacted in thereafter. It is possible this legislation will cap national emissions and introduce a trading scheme for GHG emission allowances and/or extend the current carbon tax;

A number of climate change bills have been introduced in the United States Congress but the likely impact on us remains unclear, as no legislation has yet been finalized. In May 2010, the US Environmental Protection Agency finalized rules under the existing US Clean Air Act, that in some instances will require the installation of best available control technology to control GHGs from large emitters; and

In Brazil, the National Plan for Climate Change was enacted in December 2008 aiming to reduce deforestation, the main cause of Brazil's GHG emissions. While Brazil is not yet formally regulating GHG emissions at the national level, some state environmental agencies request companies to voluntarily submit GHG emissions management plans.

Some of these measures already result in increased compliance costs for our power suppliers and are passed through to us in the form of price increases. For instance, in South Africa since 2009, we pay a levy of ZAR0.02 per kilowatt hour for electricity generated from fossil fuels. These levies may increase over time and additional levies may be introduced in the future in South Africa or other countries, which could result in a significant increase in our costs.

In addition, our operations could be exposed to a number of physical risks from climate change, such as increased rainfall, reduced water availability, higher temperatures and extreme weather events. Events or conditions such as flooding or inadequate water supplies could disrupt our mining and transport operations, mineral processing and rehabilitation efforts, and could increase health and safety risks onsite. In addition, such events or conditions could have adverse effects such as increased disease prevalence in our workforce and in communities in close proximity to our operations.

Mining operations and projects are vulnerable to supply chain disruption and our operations and development projects could be adversely affected by shortages of, as well as lead times to deliver, strategic spares, critical consumables, mining equipment or metallurgical plant.

Our operations and development projects could be adversely affected by shortages of, as well as lead times to deliver, strategic spares, critical consumables, mining equipment and metallurgical plant. In the past, we and other gold mining companies have experienced shortages in critical consumables,

S-24

Table of Contents

particularly as production capacity in the global mining industry has expanded in response to increased demand for commodities, and we have experienced increased delivery times for these items. These shortages have also resulted in unanticipated increases in the price of certain of these items. Shortages of strategic spares, critical consumables, mining equipment or metallurgical plant, which could occur in the future, could result in production delays and production shortfalls, and increases in prices result in an increase in both operating costs and the capital expenditure to maintain and develop mining operations.

We and other gold mining companies, individually, have limited influence over manufacturers and suppliers of these items. In certain cases there are only limited suppliers for certain strategic spares, critical consumables, mining equipment or metallurgical plant who command superior bargaining power relative to us, or we could at times face limited supply or increased lead time in the delivery of such items.

Our procurement policy is to only source our mining and processing equipment and consumables from suppliers that meet our corporate values and ethical standards. In certain locations where a limited number of suppliers meet these standards, this places further strain upon our supply chain, thereby increasing our cost of supply and time of delivery.

If we experience shortages, or increased lead times in delivery of strategic spares, critical consumables, mining equipment or processing plant, our results of operations and our financial condition could be adversely affected.

Diversity in interpretation and application of accounting literature in the mining industry may impact our reported financial results.

The mining industry has limited industry-specific accounting literature. As a result, diversity exists in the interpretation and application of accounting literature to mining specific issues. For example, we capitalize the drilling and related costs incurred to define and delineate a residual mineral deposit that has not been classified as proved and probable reserves at a development stage or production stage mine, whereas some companies expense such costs. As and when diversity in interpretation and application is addressed, it may impact our reported results should the adopted interpretation differ from the position followed by us.

Risks related to our results of operations and our financial condition as a result of factors specific to us and our operations

We also face many specific risks related to our operations that may affect our cash flows and overall profitability.

We use gold hedging instruments and have entered into long-term sales contracts, which may prevent us from realizing potential gains resulting from subsequent commodity price increases in the future.

We have used gold hedging instruments to hedge the selling price of some of our anticipated production. The use of such instruments prevents full participation in subsequent increases in the market price for the commodity with respect to covered production. Since 2001, we have been reducing our hedge commitments through hedge buy-backs (limited to non-hedge derivatives until 2008), deliveries into contracts and restructuring in order to provide greater participation in a rising gold price environment. As a result of these measures, we have, and expect to continue to have, substantially less protection against declines in the market price of gold as compared with previous years.

We continue to hold gold hedging instruments to hedge the selling price of a portion of our anticipated gold production and to protect revenues against unfavorable gold price and exchange rate movements. While the use of these instruments may protect against a drop in gold prices and

Table of Contents

exchange rate movements, it will do so for only a limited period of time and only to the extent that the hedge remains in place. The use of these instruments may also prevent us from fully realizing the positive impact on income from any subsequent favorable increase in the price of gold on the portion of production covered by the hedge and of any subsequent favorable exchange rate movements.

During 2009, we continued executing our strategy to reduce our outstanding gold derivatives position, which resulted in our decision to accelerate the settlement of certain outstanding gold derivative positions. These accelerated settlements, together with the normal scheduled deliveries and maturities of other gold derivatives positions during 2009 and the first half of 2010, reduced the total committed ounces from 5.99 million ounces as at December 31, 2008 to 3.22 million ounces as at June 30, 2010 and 2.72 million ounces as at September 14, 2010.

Although the hedge restructurings and reductions referred to above have significantly reduced our hedge book, the current gold price results in a gap between the spot price and our received price of gold for ounces still hedged, and this may continue as we close out our existing hedge positions.

We face risks and uncertainties in the execution of our planned gold hedge restructuring.

Through the planned gold hedge restructuring, we intend to effectively eliminate our residual gold hedging position by early 2011, including by procuring early settlement of existing contracts that mature beyond 2010 in addition to purchasing off-setting derivatives and to settling contracts already due to mature. However, the exact nature and extent and execution of the gold hedge restructuring will depend upon the successful completion of this offering and the Mandatory Convertible Bonds Offering. The execution of the gold hedge restructuring will also depend or be affected by our ability to obtain consents from certain of our hedge counterparties, shareholder approval for the issuance of our ordinary shares underlying the ADSs issuable upon conversion of the Mandatory Convertible Bonds, the consent of our lenders under our revolving credit facility to amend the financial covenants such that the principal amount of the Mandatory Convertible Bonds is not treated as debt and the fair value adjustments of the Mandatory Convertible Bonds are not included in the calculation of EBITDA for purposes of the financial covenants, as well as prevailing and anticipated market conditions at the time of restructuring, particularly prevailing gold prices, exchange rates and other relevant economic factors. Should these conditions become unfavorable at any stage during the restructuring, this may delay or frustrate the implementation of the restructuring. In addition, should the outlook for gold prices, exchange rates and other economic factors materially change, it is possible that our plans for the execution of the gold hedge restructuring may be modified so as to minimize the adverse impact from such changes or maximize the benefits from them. If we are not able to successfully execute the planned gold hedge restructuring then we will be prevented from fully participating in higher gold prices should they continue to prevail.

Our mining rights in the countries in which we operate could be altered, suspended or cancelled for a variety of reasons, including if we breach our obligations in respect of our mining rights.

Our rights to own and exploit mineral reserves and deposits are governed by the laws and regulations of the jurisdictions in which the mineral properties are located. Currently, a significant portion of our mineral reserves and deposits are located in countries where mining rights could be suspended or cancelled should we breach our obligations in respect of the acquisition of these rights.

In all of the countries where we operate, the formulation or implementation of government policies may be unpredictable on certain issues, including changes in laws relating to mineral rights and ownership of mining assets and the rights to prospect and mine and in extreme cases, nationalization. Any existing and new mining and exploration operations and projects are subject to various national and local laws, policies and regulations governing the ownership and the right to prospect or mine or develop proposed projects. If we are not able to obtain or maintain necessary permits, authorizations or agreements to prospect or mine or to implement planned projects, or continue our

operations

S-26

Table of Contents

under conditions, or within time frames, that make such plans and operations economically viable, or if the laws impacting our ownership of our mineral rights, or our right to prospect or mine were to change materially, our results of operations and our financial condition could be adversely affected.

In South Africa, mining rights are linked to meeting various obligations that include the Broad-Based Socio-Economic Empowerment Charter for the South African Mining Industry, or the Mining Charter. Compliance with the Mining Charter, measured using a designated scorecard, requires that every mining company achieve 15% ownership by historically disadvantaged South Africans, or HDSAs, of its South African mining assets by May 2009, and 26% ownership by May 2014, and achieves participation by HDSAs in various other aspects of management.

We believe that we have made significant progress towards meeting the requirements of the Mining Charter, the scorecard and our own undertakings in terms of human resource development, employment equity, mine community and rural development, housing and living conditions, procurement and beneficiation. We will incur expenses in giving further effect to the Mining Charter and the scorecard.

The Mining Charter provides that it should be reviewed five years after becoming law. The outcome of the first phase of the review was made public in June 2010 and the outcome of the final review was made public in September 2010. According to the Mining Charter review, we are in compliance with the Mining Charter's requirements relating to ownership by HDSAs of our mining assets and currently we are in compliance with the Mining Charter's requirements relating to, among others, human resource development, mine community development, and sustainable development and growth. Whilst we are in compliance with the Mining Charter's ownership targets to be achieved by May 2014, we must make further progress to achieve future targets set under the Mining Charter, in particular, further participation by HDSAs in various aspects of management, the upgrade of housing and accommodation at our mines, further human resource development, further mine community development, further sustainable development and growth and further procurement and enterprise development, certain of which are also included under the Code and Standard, as defined and discussed below and which targets must also be achieved by May 2014. We expect to be in compliance with these provisions by May 2014.

As required by the South African Mineral and Petroleum Resources Development Act, or the MPRDA, the Minister of Mineral Resources published a Code of Good Practice for the Minerals Industry, or the Code, and the Housing and Living Conditions Standard, or the Standard, in April 2009. The Code was developed to create principles which would facilitate the effective implementation of minerals and mining legislation and enhance the implementation of the Mining Charter applicable to the mining industry. The Standard aims to include the provision of housing as an integral part of infrastructure during the development of a mine. Both the Code and the Standard provide that non-compliance equates to non-compliance with the MPRDA. It is unclear whether non-compliance with the Code or the Standard would lead to the cancellation or suspension of a mining right or whether they would be considered legislation under the MPRDA. Subsequent to the publication of the Code and the Standard, representatives of the Department of Mineral Resources, organized labor and the South African mining industry have engaged in discussions in an effort to address the concerns of the mining industry and to possibly amend the Code and the Standard. Furthermore, discussions related to the Code and Standard have also become related to the review of the Mining Charter. It is anticipated that the contents of the Code and Standard will ultimately be amended in line with the amendments to the Mining Charter that have resulted from its review. Details of the final Code and Standard are currently uncertain.

Our mining rights in South Africa can be suspended or cancelled by the Minister of Mineral Resources if, upon notice of a breach from the Minister, we breach our obligations in complying with the MPRDA. The MPRDA also imposes additional responsibilities on mining companies relating to environmental management and to environmental damage, degradation or pollution resulting from their prospecting or mining activities. We have a policy of evaluating, minimizing and addressing the

Table of Contents

environmental consequences of our activities and, consistent with this policy and the MPRDA, conduct an annual review of the environmental costs and liabilities associated with our South African operations in light of applicable requirements.

We may experience unforeseen difficulties, delays or costs in successfully implementing our business strategy, and our strategy may not result in the anticipated benefits.

The successful implementation of our business strategy depends upon a number of factors, including factors that are outside our control. For example, the successful management of costs will depend upon prevailing market prices for input costs and the ability to grow the business will depend on the successful implementation of our existing and proposed project development initiatives and continued exploration success as well as on the availability of attractive merger and acquisition opportunities, all of which are subject to the relevant mining and company specific risks as outlined in these risk factors. We cannot give assurance that unforeseen difficulties, delays or costs will not adversely affect the successful implementation of our business strategy, or that our strategy will result in the anticipated benefits.

Our level of indebtedness could adversely affect our business.

As at June 30, 2010, we had gross borrowings of approximately \$1.7 billion. In connection with the Mandatory Convertible Bonds Offering, AngloGold Ashanti Holdings Finance plc, our indirect wholly-owned subsidiary, is also offering up to \$686,162,400 aggregate principle amount (or \$789,086,750 aggregate principal amount if the underwriters of that offering exercise their over-allotment option with respect to that offering in full) of 6.00% mandatory convertible subordinated bonds due 2013, which we will guarantee on a subordinated basis.

Our indebtedness could have adverse effects on our flexibility to do business. For example, we may be required to utilize a large portion of our cash flow to pay the principal and interest on our debt which will reduce the amount of funds available to finance existing operations, the development of new organic growth opportunities and further acquisitions. In addition, under the terms of our borrowing facilities from our banks, we are obliged to meet certain financial and other covenants. Our ability to continue to meet these covenants will depend upon our future financial performance which will be affected by our operating performance as well as by financial and other factors, certain of which are beyond our control.

Under our revolving credit facility, we are required not to exceed a specified net debt to EBITDA ratio (as defined in the facility). The issuance of the Mandatory Convertible Bonds and the use of the proceeds thereof will increase our net debt, as the Mandatory Convertible Bonds will be treated as debt for this purpose, and make our EBITDA (defined by reference to our IFRS financial statements for purposes of the financial covenants in our revolving credit facility) more volatile as we will be required to record future changes in the fair value of the option component of the Mandatory Convertible Bonds, which could be material, in our IFRS income statement.

We intend to seek the consent of our lenders under the revolving credit facility to amend the financial covenants such that the principal amount of the Mandatory Convertible Bonds is not treated as debt and the fair value adjustments of the Mandatory Convertible Bonds are not included in the calculation of EBITDA for purposes of the financial covenants. If we fail to obtain such consent, the exact nature and extent of, and our ability to execute, the gold hedge restructuring, our capacity to incur indebtedness and our ability to fund our development projects and exploration initiatives, or spend cash on hand, may be materially affected or we may be required to refinance our revolving credit facility.

Should the cash flow from operations be insufficient, we could breach our financial and other covenants and may be required to refinance all or part of our existing debt, use existing cash balances, issue additional equity or sell assets. We cannot be sure that we will be able to do so on commercially reasonable terms, if at all.

Table of Contents

We expect to have significant financing requirements.

Our development projects and exploration initiatives, including the Mponeng Ventersdorp Contact Reef Projects in South Africa, Córrego do Sítio and Lamego in Brazil, the mine life extension project at Cripple Creek & Victor in the United States and the heap leach project at Cerro Vanguardia in Argentina and, if approved, the development of Tropicana in Australia, La Colosa in Colombia, the Kibali gold project and the Mongbwalu project in the DRC, the Mponeng CLR project and project Zaaiplaats in South Africa, the Cerro Vanguardia underground mining project in Argentina, the Nova Lima Sul project in Brazil, the Sadiola Deeps project in Mali as well as various other greenfields and brownfields exploration projects and feasibility studies, will require significant funding. We estimate that these growth initiatives will require project capital expenditure (excluding stay in business and ore reserve development capital expenditure) of approximately \$2,450 million over the next three years. Our capital expenditure plans and requirements are subject to a number of risks, contingencies and other factors, some of which are beyond our control, and therefore our actual future capital expenditure and investments may differ significantly from their current planned amounts. Our operating cash flow and credit facilities may be insufficient to meet all of these expenditures, depending on the timing and costs of development of these and other projects as well as our operating performance and available headroom under our credit facilities. As a result, new sources of capital may be needed to meet the funding requirements of these developments, to fund ongoing business activities and to pay dividends. Our ability to raise and service significant new sources of capital will be a function of macroeconomic conditions, future gold prices, our operational performance and operating cash flow and debt position, among other factors. Our ability to raise further debt financing in the future and the cost of such financing will depend on, among other factors, our prevailing credit rating, which may be affected by our ability to maintain our outstanding debt and financial ratios at levels acceptable to the credit ratings agencies, our business prospects or other factors. As a result, in the event of lower gold prices, unanticipated operating or financial challenges, or new funding limitations, our ability to pursue new business opportunities, invest in existing and new projects, fund our ongoing business activities, retire or service our outstanding debt and pay dividends could be significantly constrained, all of which could adversely affect our results of operations and our financial condition.

If our shareholders do not approve the issuance of ordinary shares underlying the ADSs issuable upon conversion of the Mandatory Convertible Bonds, the Mandatory Convertible Bonds will be subject to automatic cash settlement.

If our shareholders do not approve the issuance of the ordinary shares underlying the ADSs issuable upon conversion of the Mandatory Convertible Bonds, the Mandatory Convertible Bonds will be subject to automatic cash settlement. Cash settlement of the Mandatory Convertible Bonds will require significant cash reserves, which could further constrain our ability to pursue new business opportunities, invest in existing and new projects, fund our ongoing business activities, retire or service our outstanding debt and pay dividends, all of which could adversely affect our results of operations and our financial condition.

Furthermore, the rating agencies that rate us may revise our credit rating outlook from stable to negative watch as a result of the need to convene a shareholder meeting to obtain the approval of the shareholders to allot and issue our shares upon conversion of the Mandatory Convertible Bonds and may take further rating action, including a downgrade, if we fail to obtain such shareholder approval.

We do not operate two of our significant joint venture projects. If the operators of these projects do not perform effectively and efficiently, our investment in these projects could be adversely affected and/or our reputation could be harmed.

Our joint ventures at Morila in Mali and at Kibali in the DRC are operated by our joint venture partners. While we provide strategic management and operational advice to our joint venture partners in respect of these projects, we

cannot ensure that these projects are operated in compliance with the standards that we apply in our other operations. If these joint ventures are not operated effectively or

S-29

Table of Contents

efficiently, including as a result of weaknesses in the policies, procedures and controls implemented by the joint venture partners, our investment in the relevant project could be adversely affected. In addition, negative publicity associated with ineffective and inefficient operatorship, particularly relating to any resulting accidents or environmental incidents, could harm our reputation.

Our mineral reserves, deposits and mining operations are located in countries that face political, economic and/or security risks.

Some of our mineral deposits and mining and exploration operations are located in countries that have experienced political instability and economic uncertainty. In all of the countries where we operate, the formulation or implementation of government policies may be unpredictable on certain issues including regulations which impact our operations and changes in laws relating to issues such as mineral rights and asset ownership, taxation, royalties, import and export duties, currency transfers, restrictions on foreign currency holdings and repatriation of earnings.

Any existing and new mining and exploration operations and projects we carry out in these countries are, and will be subject to, various national and local laws, policies and regulations governing the ownership, prospecting, development and mining of mineral reserves, taxation and royalties, exchange controls, import and export duties and restrictions, investment approvals, employee and social community relations and other matters.

If, in one or more of these countries, we were not able to obtain or maintain necessary permits, authorizations or agreements to implement planned projects or continue our operations under conditions or within time frames that make such plans and operations economic, or if legal, ownership, fiscal (including all royalties and duties), exchange control, employment, environmental and social laws and regimes, or the governing political authorities change materially, resulting in changes to such laws and regimes, our results of operations and our financial condition could be adversely affected.

Certain of the countries in which we have mineral deposits or mining or exploration operations, including the DRC and Colombia, have in the past experienced, and in certain cases continue to experience, a difficult security environment as well as political instability. In particular, various illegal groups active in regions in which we are present may pose a credible threat of terrorism, extortion and kidnapping, which could have an adverse effect on our operations in such regions. In the event that continued operations in these countries compromise our security or business principles, we may withdraw from these countries on a temporary or permanent basis. Furthermore, we have at times experienced strained relationships with some of the communities in which we operate. This could have an adverse impact upon our results of operations.

In December 2008, the National Council for Democracy and Development, or CNDD, seized power in Guinea after the death of the country's long-standing president, Lasana Conte. Moussa Dadis Camara, president of the CNDD, announced on December 27, 2008 the creation of a committee to examine and revise all existing mining agreements in Guinea. The committee's review process has not yet commenced and we are currently unable to predict the timing and outcome of the committee's examination. Pursuant to the direction of president Moussa Dadis Camara or his ministers, production at our Siguiriri mine in Guinea and the export of gold from Guinea were temporarily interrupted during 2009, following a demand by the government to cash settle our environmental provisions. Production at the Siguiriri mine resumed after we made a partial payment against our environmental provisions to the government of Guinea. We cannot give any assurance that future stoppages of this nature may not occur, or that further payments in advance of future liabilities will not be demanded by the government of Guinea. Such stoppages, if prolonged, could have a material adverse effect on the Siguiriri mine. On December 3, 2009, president Moussa Dadis Camara was shot in an apparent assassination attempt and subsequently signed a transition agreement allowing for the end of military rule, presidential elections and the transfer of Guinea back to civilian rule. A new transitional government was appointed while elections are held. A first round of elections was held but, as a clear winner did not emerge, a second round of

elections will take place

S-30

Table of Contents

at a date which is yet to be announced. President Moussa Dadis Camara has ruled himself out of running the presidential elections and the key figures in Guinea's military hierarchy have all publicly vowed their support for the end to military rule. It is not certain what impact any future political instability in Guinea may have on our ability to manage and operate our mining operations in Guinea.

In Guinea, Mali and Tanzania, we are due refunds of input tax and fuel duties which remain outstanding for periods longer than those provided for in the respective statutes. In addition, we have other outstanding assessments and unresolved tax disputes in a number of countries, including Brazil, Argentina and Ghana. If the outstanding VAT input taxes are not received, the tax disputes are not resolved and assessments are not made in a manner favorable to us, it could have an adverse effect upon our results of operations and our financial condition. We may also be impacted by the outcome of elections in jurisdictions in which we have operations and ancillary political processes leading up to elections. We expect elections to occur in Tanzania in 2010, in the DRC in 2011 and in South Africa in 2014.

In February 2010, we and other mining companies operating in Ghana received notice that the government of Ghana was considering a review and various amendments to the Ghanaian mining fiscal regime. We have indicated to the government of Ghana that we substantially reject their proposals in light of the stability agreement we entered into with the government of Ghana in December 2003 and which was subsequently ratified by the parliament of Ghana in early 2004. If the government of Ghana prevails with its proposed amendment to the Ghanaian mining fiscal regime, then the royalties and income tax that we pay would increase significantly, which would have an adverse impact upon our results of operations in Ghana and our financial condition.

In May 2010, the government of Australia proposed a Resource Super Profit Tax, or "RSPT", which would have required extractive industries, including the gold mining industry, to pay a tax of 40% on profits from Australian operations above certain levels determined by the government. Had the RSPT been implemented as proposed it would have had an adverse impact upon our financial results from our existing operations in Australia as well as from the Tropicana project when it becomes operational. However, in July 2010, the government of Australia proposed to replace the RSPT with the Mineral Resource Rent Tax, or "MRRT", which will require companies to pay a tax of 30% on profits above certain levels determined by the government from the mining of iron ore and coal in Australia from July 1, 2012.

Should the government of Australia reintroduce the RSPT or extend the MRRT to the gold mining industry, or if similar super profit taxes are introduced in Australia or any other country in which we operate by governments seeking to capture a greater share of the economic benefits from their natural resources, our results of operations and financial position could be adversely affected.

Labor disruptions and/or increased labor costs could have an adverse effect on our results of operations and financial condition.

Our employees in South Africa, some South American countries, Ghana and Guinea are highly unionized. Trade unions therefore have a significant impact on our labor relations climate, as well as on social and political reforms, most notably in South Africa. There is a risk that strikes or other types of conflict with unions or employees may occur at any of our operations, particularly where the labor force is unionized. Labor disruptions may be used to advocate labor, political or social goals in the future. For example, labor disruptions may occur in sympathy with strikes or labor unrest in other sectors of the economy. Material labor disruptions could have an adverse effect on our results of operations and our financial condition.

As at December 31, 2009, approximately 67% of our workforce excluding contractors, or approximately 59% of our total workforce, was located in South Africa. In South Africa, it has become established practice to negotiate wages

and conditions of employment with the unions every two years through the Chamber of Mines of South Africa. An agreement was signed with the unions in July 2009, following negotiations among the National Union of Mineworkers, the United Associations

S-31

Table of Contents

of South Africa, or UASA (on behalf of some clerical and junior management staff) and Solidarity (on behalf of a small number of miners) and the Chamber of Mines. This two-year wage agreement was reached without resort to any industrial action. We have agreed to an increase that has a 9.7% impact on payroll costs for our South African operations in the first year and 1% above inflation, with a guaranteed minimum of 7.5%, in the second year. These wage increases were effective July 1, 2009. The next round of negotiations is expected to take place in 2011. We cannot give assurance that we will be able to renegotiate this agreement on satisfactory terms when it expires in July 2011.

As at December 31, 2009, approximately 11% of our workforce excluding contractors, or approximately 12% of our total workforce, was located in Ghana. In Ghana, a three-year wage agreement for the years 2009 to 2011, effective from January 1, 2009, was reached towards the end of 2009. We have agreed to increases that have a 10%, 12% and 12% impact on payroll costs for our Ghanaian operations for 2009, 2010 and 2011, respectively. The next round of negotiations is expected to take place in 2011. We cannot give assurance that we will be able to renegotiate this agreement on satisfactory terms when it expires at the end of December 2011.

Labor costs represent a substantial proportion of our total operating costs, and in many operations, including our South African, Ghanaian and Tanzanian operations, is our single largest operating cost component. Any increases in labor costs have to be off-set by greater productivity efforts by all operations and employees.

Certain factors may affect our ability to support the carrying amount of our property, plant and equipment, acquired properties, investments and goodwill on our balance sheet. If the carrying amount of our assets is not recoverable, we may be required to recognize an impairment charge, which could be significant.

We review and test the carrying value of our assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. We value individual mining assets at the lowest level for which identifiable cash flows are identifiable as independent of cash flows of other mining assets and liabilities.

If there are indications that impairment may have occurred, we prepare estimates of expected future cash flows for each group of assets. Expected future cash flows are inherently uncertain, and could materially change over time. They are significantly affected by reserve and production estimates, together with economic factors such as spot and forward gold prices, discount rates, currency exchange rates, estimates of costs to produce reserves and future capital expenditure.

If any of these uncertainties occur either alone or in combination, it could require management to recognize an impairment, which could adversely affect our financial condition.

The use of mining contractors at certain of our operations may expose us to delays or suspensions in mining activities and increases in mining costs.

We use mining contractors at certain of our operations to mine and deliver ore to processing plants. Consequently, at these mines, we do not own all of the mining equipment, and contracting costs represent a significant proportion of the total operating costs of these operations. Our operations could be disrupted, resulting in additional costs and liabilities, if the mining contractors at these mines have financial difficulties, or should there be a dispute in renegotiating a mining contract, or a delay in replacing an existing contractor. Increases in contract mining rates, in the absence of associated productivity increases, will also have an adverse impact on our results of operations and financial condition.

We compete with mining and other companies for key human resources.

We compete with mining and other companies on a global basis to attract and retain key human resources at all levels with appropriate technical skills and operating and managerial experience necessary to continue to operate our business. This is further exacerbated in the current environment of

S-32

Table of Contents

increased mining activity across the globe, combined with the global shortage of key mining industry human resource skills, including geologists, mining engineers, metallurgists and skilled artisans.

The retention of staff is particularly challenging in South Africa, where, in addition to the impacts of global industry shortages of skilled labor, we are also required to achieve employment equity targets of participation by HDSAs in management and other positions.

We compete with all companies in South Africa to attract and retain a small but growing pool of HDSAs with the necessary skills and experience.

There can be no assurance that we will attract and retain skilled and experienced employees and, should we fail to do so or lose any of our key personnel, our business and growth prospects may be harmed and our results of operations and our financial condition could be adversely affected.

The treatment of occupational health diseases and the potential liabilities related thereto may have an adverse effect upon the results of our operations and our financial condition.

The primary areas of focus in respect of occupational health within our operations in terms of employee welfare are noise induced hearing loss, or NIHL, occupational lung diseases, or OLD, which includes pulmonary and tuberculosis, or TB, in silica dust exposed individuals. We provide occupational health services to our employees at our occupational health centers and we continue to improve preventative occupational hygiene initiatives. If the costs associated with providing such occupational health services increase, the increase could have an adverse effect on our results of operations and our financial condition.

The South African government, by way of a cabinet resolution in 1999, has proposed a possible combination and alignment of benefits of the Occupational Diseases in Mines and Works Act, or ODMWA, that provides for compensation to miners who have OLD, TB and combinations thereof, and the Compensation for Occupational Injuries and Diseases Act, or COIDA, that provides for compensation to non-miners who have OLD. It appears less likely that the proposed combination of the two acts will occur but some alignment of benefits may be considered. COIDA provides for compensation payments to workers suffering permanent disabilities from OLD, which are classified as pension liabilities if the permanent disability is above a certain threshold, or a lump sum compensation payment if the permanent disability is below a certain threshold. ODMWA only provides for a lump sum compensation payment to workers suffering from OLD. The capitalized value of a pension liability (in accordance with COIDA) is usually greater than that of a lump sum compensation payment (under ODMWA). In addition, under COIDA compensation becomes payable at a lower threshold of permanent disability than under ODMWA. It is estimated that under COIDA about two to three times more of our employees would be compensated as compared with those eligible for compensation under ODMWA.

If the proposed combination of COIDA and ODMWA were to occur, this could further increase the level of compensation claims we could be subject to and consequently could have an adverse effect on our financial condition.

Mr. Thembekile Mankayi instituted a legal action against us in October 2006 in the South Gauteng High Court. Mr. Mankayi claimed approximately ZAR2.6 million for damages allegedly suffered by him as a result of silicosis allegedly contracted while working on mines now owned by us. The case was heard and a judgment in the exception action was rendered on June 26, 2008 in our favor on the basis that mine employers are insured under ODMWA and COIDA against compensable diseases, which precludes common law delictual claims by employees against employers. The appeal of Mr. Mankayi to the Supreme Court of Appeal of South Africa was dismissed. On August 17, 2010, Mr. Mankayi applied for leave to appeal to the Constitutional Court of South Africa, which is expected to permit or reject the application within four to six weeks from the date of the application. The

Constitutional Court had previously found in another case that COIDA compensation is constitutional. If we are ultimately unsuccessful in defending this suit, we could be subject to numerous similar claims which could have an adverse effect on our financial condition.

S-33

Table of Contents

In response to the effects of silicosis in labor sending communities, a number of mining companies (under the auspices of the Chamber of Mines), together with the NUM, which is the largest union in the mining sector and the national and regional departments of health have embarked on a project to assist in the delivery of compensation and relief by mining companies under the ODMWA to communities that have been affected.

We face certain risks in dealing with HIV/AIDS, particularly at our South African operations, and with tropical disease outbreaks such as malaria, which may have an adverse effect on our results of operations.

AIDS and associated diseases remain the major health care challenge faced by our South African operations. Accurate prevalence data for AIDS is not available owing to doctor-patient confidentiality. The South African workforce prevalence studies indicate that the percentage of our South African workforce that may be infected by HIV may be as high as 30%. We are continuing to develop and implement various programs aimed at helping those who have been infected with HIV and preventing new infections. Since 2001, we have offered a voluntary counseling and HIV testing program for employees in South Africa. In 2002, we began to offer anti-retroviral therapy, or ART, to HIV positive employees who met the current medical criteria for the initiation of ART. From April 2003, we commenced a rollout of the treatment to all eligible employees desiring it. As of December 2009, approximately 2,200 employees were receiving treatment using anti-retroviral drugs.

We do not expect the cost that it will incur related to the prevention of HIV infection and the treatment of AIDS to materially and adversely affect our results of operations. Nevertheless, it is not possible to determine with certainty the costs that we may incur in the future in addressing this issue, and consequently our results of operations and our financial condition could be adversely affected.

Malaria and other tropical diseases pose significant health risks at all of our operations in Central, West and East Africa where such diseases may assume epidemic proportions because of ineffective national control programs. Malaria is a major cause of death in young children and pregnant women but also gives rise to fatalities and absenteeism in adult men. Consequently, if uncontrolled, the disease could have an adverse effect upon productivity and profitability levels of our operations located in these regions.

The costs associated with the pumping of water inflows from closed mines adjacent to our operations could have an adverse effect upon our results of operations.

Certain of our mining operations are located adjacent to the mining operations of other mining companies. The closure of a mining operation may have an impact upon continued operations at the adjacent mine if appropriate preventative steps are not taken. In particular, this can include the ingress of underground water where pumping operations at the adjacent closed mine are suspended. Such ingress could have an adverse effect upon any one of our mining operations as a result of property damage, disruption to operations and additional pumping costs and consequently could have an adverse impact upon our results of operations and our financial condition.

Regulation of over the counter (OTC) derivatives may adversely affect our financial condition and results of operations.

There is new legislation in the United States and there are proposals in the European Union to introduce laws and regulations that affect OTC derivatives, including rules that would increase collateralization and push many so-called standardized OTC derivatives into central clearing and exchange trading. This new or proposed legislation could:

adversely affect the costs of trading in derivatives, including for commodity, interest rate and foreign exchange hedging purposes;

Table of Contents

adversely affect pricing and other terms on which dealers are prepared to offer derivative contracts;

adversely affect the ability of dealers to offer customized hedges to us;

adversely affect the use of derivatives for purposes other than pure hedging; or

increase the working capital required by non-financial firms using derivatives for hedging purposes or render uneconomical the use of derivatives for hedging purposes, thereby exposing non-financial firms to unhedgeable risks.

We make use of financial derivatives in our treasury activities, particularly for gold, interest rate and foreign exchange hedging, and as a result any of the foregoing could adversely affect our financial condition and results of operations.

The occurrence of events for which we are not insured or for which our insurance is inadequate may adversely affect our cash flows and overall profitability.

We maintain insurance to protect only against catastrophic events which could have a significant adverse effect on our operations and profitability. This insurance is maintained in amounts that we believe to be reasonable depending upon the circumstances surrounding each identified risk. However, our insurance does not cover all potential risks associated with our business. In addition, we may elect not to insure certain risks, due to the high premiums associated with insuring those risks or for various other reasons, including an assessment that the risks are remote.

We may not be able to obtain insurance coverage at acceptable premiums. The availability and cost of insurance coverage can vary considerably from year to year as a result of events beyond our control or from claims, and this can result in higher premiums and periodically being unable to maintain the levels or types of insurance carried.

The occurrence of events for which we are not insured may adversely affect our cash flows and overall profitability and our financial condition.

Risks related to our ordinary shares and our ADSs

Sales of large quantities of our ordinary shares and ADSs, the perception that these sales may occur or other dilution of our equity could adversely affect the prevailing market price of such securities.

The market price of our ordinary shares or ADSs could fall if large quantities of ordinary shares or ADSs are sold in the public market, or there is the perception in the marketplace that such sales could occur. Subject to applicable securities laws, holders of our ordinary shares or ADSs may sell them at any time. The market price of our ordinary shares or ADSs could also fall as a result of any future offerings we make of our ordinary shares, ADSs, or securities exchangeable or exercisable for our ordinary shares or ADSs, or the perception in the market place that these sales might occur. We may make such offerings, including offerings of additional ADS rights, share rights or similar securities, at any time or from time to time in the future. In addition, concurrently with this offering, AngloGold Ashanti Holdings Finance plc, our indirect wholly-owned subsidiary, is also offering up to \$686,162,400 aggregate principal amount (or \$789,086,750 aggregate principal amount if the underwriters of that offering exercise their over-allotment option with respect to that offering in full) of the Mandatory Convertible Bonds, which are mandatorily convertible into our ADSs (or, in certain circumstances, the cash value thereof), and as at July 31, 2010, up to 15,384,615 of our ADSs (representing up to 15,384,615 of our ordinary shares) were issuable upon conversion of \$732,500,000 principal amount of guaranteed convertible bonds issued by AngloGold Ashanti Holdings Finance plc in May 2009. The conversion of the Mandatory Convertible Bonds or the guaranteed convertible bonds will dilute the

ownership interest of our existing shareholders. For a

S-35

Table of Contents

description of the Mandatory Convertible Bonds, please see Prospectus Supplement Summary Recent Developments Concurrent Offering of Mandatory Convertible Bonds .

In addition, the price of our ordinary shares and/or ADSs could also be negatively affected by possible sales (including short sales) of our ordinary shares or ADSs by investors who view the Mandatory Convertible Bonds as a more attractive means of equity participation in us and by the hedging or arbitrage trading activity that we expect to develop involving our ordinary shares or ADSs as a result of the issuance of the Mandatory Convertible Bonds.

Fluctuations in the exchange rate of currencies may reduce the market value of our securities, as well as the market value of any dividends or distributions paid by us.

We have historically declared all dividends in South African rands. As a result, exchange rate movements may have affected and may continue to affect the Australian dollar, the British pound, the Ghanaian cedi and the US dollar value of these dividends, as well as of any other distributions paid by the relevant depository to investors that hold our securities. This may reduce the value of these securities to investors.

Our memorandum and articles of association allows for dividends and distributions to be declared in any currency at the discretion of our board of directors, or our shareholders at a general meeting. If and to the extent that we opt to declare dividends and distributions in US dollars, exchange rate movements will not affect the US dollar value of any dividends or distributions; nevertheless, the value of any dividend or distribution in Australian dollars, British pounds, Ghanaian cedis or South African rands will continue to be affected. If and to the extent that dividends and distributions are declared in South African rands, exchange rate movements will continue to affect the Australian dollar, British pound, Ghanaian cedi and US dollar value of these dividends and distributions. Furthermore, the market value of our securities as expressed in Australian dollars, British pounds, Ghanaian cedis, US dollars and South African rands will continue to fluctuate in part as a result of foreign exchange fluctuations.

The announced proposal by the South African Government to replace the Secondary Tax on Companies with a withholding tax on dividends and other distributions may impact the amount of dividends or other distributions received by our shareholders.

On February 21, 2007, the South African Government announced a proposal to replace Secondary Tax on Companies with a 10% withholding tax on dividends and other distributions payable to shareholders. Although this may reduce the tax payable by our South African operations, thereby increasing distributable earnings, the withholding tax will generally reduce the amount of dividends or other distributions received by our shareholders.

The proposal was expected to be implemented in 2010, but its implementation has been delayed due to difficulties in renegotiating double tax agreements in various jurisdictions. No final date for the implementation of the proposal has been announced.

Table of Contents

USE OF PROCEEDS

We estimate the net proceeds to us from our sale of ordinary shares under this prospectus supplement to be \$667 million after deducting the underwriting discount and our offering expenses (assuming the underwriters do not exercise their over-allotment option). We intend to use the net proceeds from this offering and the net proceeds from the Mandatory Convertible Bonds Offering, together with funds drawn from our existing credit facilities and cash on hand, to effectively eliminate our gold hedging position while maintaining a strong balance sheet to fund our development projects and exploration initiatives, as described under Prospectus Supplement Summary Hedge Book Reduction and Prospectus Supplement Summary Strategy Growing the Business , respectively.

Pending such use, we intend to reduce our short-term borrowing and the borrowing outstanding under our revolving credit facility, if any, or hold the net proceeds in cash. The weighted average maturity and interest rate of our borrowings was approximately 11.1 years and 4.97%, respectively, at June 30, 2010. For a further discussion regarding our borrowings, see Review of Financial and Operating Performance for the Six Months Ended June 30, 2010 Prepared in Accordance with US GAAP Liquidity and capital resources in our 2010 Second Quarter Report.

S-37

Table of Contents**DILUTION**

Our net tangible book value as of June 30, 2010 was \$3,243 million, or \$887 per ordinary share. Net tangible book value per share represents the amount of our total tangible assets, less total liabilities, divided by the number of ordinary shares outstanding.

After giving effect to our issue of 15,773,914 ordinary shares in the offering (assuming no exercise of the underwriters over-allotment option) at an offering price of \$43.50 per ordinary share and after deducting the estimated offering expenses payable by us, our net tangible book value as of June 30, 2010, would have been \$3,915 million, or \$1,026 per ordinary share. This represents an immediate increase of \$139 per share to new investors in the offering, as illustrated by the following table:

Offering price per share	\$ 43.50
Net tangible book value per share before the offering	\$ 887
Increase per share attributable to new investors	\$ 139
Net tangible book value per share after the offering	\$ 1,026

After giving effect to our issue of 15,773,914 ordinary shares (assuming no exercise of the underwriters over-allotment option) in the offering, existing ADS holders or shareholders will be diluted such that a shareholder holding 10% of our outstanding ordinary share capital prior to the offering will have its shareholding reduced to 9.58% of our outstanding ordinary share capital following the issuance of 15,773,914 million ordinary shares.

In addition, concurrently with this offering, AngloGold Ashanti Holdings Finance plc, our indirect wholly-owned subsidiary, is also offering up to \$686 million aggregate principal amount (or \$789 million aggregate principal amount if the underwriters of that offering exercise their over-allotment option with respect to that offering in full) of the Mandatory Convertible Bonds, which are mandatorily convertible into our ADSs (or, in certain circumstances, the cash value thereof). The conversion of the Mandatory Convertible Bonds would further dilute the ownership interest of our existing shareholders. The Mandatory Convertible Bonds will initially be convertible into a maximum of 15,773,913 ADSs (or a maximum of 18,140,000 ADSs in total if the underwriters in that offering exercise their over-allotment option with respect to that offering in full). For a description of the Mandatory Convertible Bonds, please see Prospectus Supplement Summary Concurrent Offering of Mandatory Convertible Bonds .

Table of Contents

**RECONCILIATION OF TOTAL CASH COSTS AND
TOTAL PRODUCTION COSTS TO FINANCIAL STATEMENTS**

Total cash costs as calculated and reported by us include costs for all mining, processing, onsite administration costs, royalties and production taxes, as well as contributions from by-products, but exclusive of depreciation, depletion and amortization, rehabilitation costs, employment severance costs, corporate administration costs, capital costs and exploration costs. Total cash costs per ounce are calculated by dividing attributable total cash costs by attributable ounces of gold produced.

Total production costs as calculated and reported by us include total cash costs, plus depreciation, depletion and amortization, employee severance costs and rehabilitation and other noncash costs. Total production costs per ounce are calculated by dividing attributable total production costs by attributable ounces of gold produced.

Total cash costs and total production costs should not be considered by investors in isolation or as alternatives to production costs, net income/(loss) applicable to ordinary stockholders, income/(loss) before income tax provision, net cash provided by operating activities or any other measure of financial performance presented in accordance with US GAAP or as an indicator of our performance. Furthermore, the calculation of total cash costs and total production costs, the calculation of total cash costs, total cash costs per ounce, total production costs and total production costs per ounce may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. However, we believe that total cash costs and total production costs in total by mine and per ounce by mine are useful indicators to investors and management as they provide:

an indication of profitability, efficiency and cash flows;

the trend in costs as the mining operations mature over time on a consistent basis; and

an internal benchmark of performance to allow for comparison against other mines, both within the AngloGold Ashanti group and of other gold mining companies.

Table of Contents

A reconciliation of production costs as included in our audited financial statements to total cash costs and to total production costs for each of the three years in the period ended December 31, 2009 is presented below.

AngloGold Ashanti operations Total

(In \$ millions, except as otherwise noted)

	For the Year Ended December 31,		
	2007	2008	2009
Production costs per financial statements	1,917	2,159	2,229
<i>Plus:</i>			
Production costs of equity accounted joint ventures ⁽¹⁾	126	168	154
<i>(Less)/plus:</i>			
Rehabilitation costs and other non-cash costs	(79)	12	(46)
<i>Plus/(less):</i>			
Inventory movement	36	(22)	56
Royalties	89	99	105
Related party transactions ⁽²⁾	(11)	(7)	(16)
<i>Adjusted for:</i>			
Noncontrolling interests ⁽³⁾	(59)	(61)	(65)
Non-gold producing companies and adjustments	(8)	(32)	41
Total cash costs	2,011	2,316	2,458
<i>Plus/(less):</i>			
Depreciation, depletion and amortization	678	661	637
Employee severance costs	19	9	14
Rehabilitation and other non-cash costs	79	(12)	46
<i>Adjusted for:</i>			
Noncontrolling interests ⁽³⁾	(20)	(23)	(9)
Non-gold producing companies and adjustments	(4)	(3)	(3)
Total production costs	2,763	2,948	3,143
Gold produced (000 ounces)⁽⁴⁾	5,477	4,982	4,599
Total cash costs per ounce⁽⁵⁾	367	465	534
Total production costs per ounce⁽⁵⁾	504	592	683

(1) Attributable production costs and related expenses of equity-accounted joint ventures are included in the calculation of total cash costs per ounce and total production costs per ounce.

- (2) Relates solely to production costs as included in our consolidated financial statements and has, accordingly, been included in total production costs and total cash costs.
- (3) Adjusting for noncontrolling interest of items included in calculation, to disclose the attributable portions only.
- (4) Attributable production only.
- (5) In addition to the operational performances of the mines, total cash costs per ounce and total production costs per ounce are affected by fluctuations in the currency exchange rate. We report total cash costs per ounce and total production costs per ounce calculated to the nearest US dollar amount and gold produced in ounces.

S-40

Table of Contents**HISTORICAL ORDINARY SHARE AND ADS TRADING,
DIVIDENDS AND EXCHANGE RATE INFORMATION****Ordinary Share and ADS Trading**

The following table sets out, for the periods indicated, the reported intra-day high and low market quotations for our ordinary shares on the JSE and for our ADSs on the NYSE:

Table of Contents**Annual Dividends**

The table below sets forth the amounts of interim, final and total dividends paid in respect of the years 2005 through 2009 and 2010 (through September 13, 2010), in each case in cents per ordinary share.

Year Ended December 31,⁽¹⁾	Interim	Final	Total	Interim	Final	Total
	(South African cents per ordinary share)			(US cents per ordinary share)		
2005	170	62	232	26.09	9.86	35.95
2006	210	240	450	29.40	32.38	61.78
2007	90	53	143	12.44	6.60	19.04
2008	50	50	100	6.45	4.99	11.44
2009	60	70	130	7.65	9.49	17.14
2010 (through September 13, 2010)	65 ⁽²⁾	n/a	65	9.00 ⁽³⁾	n/a	9.00 ⁽³⁾

(1) Dividends for these periods were declared in South African cents. Dollar cents per share figures have been calculated based on exchange rates prevailing on each of the respective payment dates.

(2) On August 10, 2010, our board of directors declared an interim dividend of 65 South African cents per ordinary share, with a record date of September 3, 2010, and a payment date of September 10, 2010.

(3) Approximate amount.

Future dividends will be dependent on our cash flow, earnings, planned capital expenditures, financial condition and other factors. We do not currently intend to substantially change our practice of paying out dividends from funds available after providing for capital expenditure and long-term growth. Under South African law, we may declare and pay dividends from any capital and reserves included in total shareholders' equity calculated in accordance with IFRS, subject to our solvency and liquidity. Dividends are payable to shareholders registered at a record date that is after the date of declaration. We will continue to manage capital expenditure in line with profitability and cash flow and our approach to the dividend on the basis of prudent financial management.

Under the terms of our memorandum and articles of association adopted on December 5, 2002, dividends may be declared in any currency at the discretion of our board of directors or our shareholders at a general meeting. Currently, dividends are declared in South African rands and paid in Australian dollars, South African rands, British pounds and Ghanaian cedis. Dividends paid to registered holders of our ADSs are paid in US dollars converted from South African rands by The Bank of New York Mellon, as depository, in accordance with the deposit agreement related to our ADS program.

Table of Contents**Exchange Rate Information**

The following table sets forth, for the periods and dates indicated, certain information concerning US dollar/South African rand exchange rates expressed in rands per \$1.00. On September 13, 2010, the interbank rate between rands and US dollars as reported by OANDA Corporation was ZAR7.24 = \$1.00.

Year Ended December 31,	High	Low	Year-end	Average⁽¹⁾
2005 ⁽²⁾	6.92	5.64	6.33	6.35
2006 ⁽²⁾	7.94	5.99	7.04	6.81
2007 ⁽²⁾	7.49	6.45	6.81	7.03
2008 ⁽²⁾	11.27	6.74	9.30	8.26
2009 ⁽³⁾	10.70	7.21	7.42	8.44
2010 (through September 13, 2010) ⁽³⁾	8.08	7.13	n/a	7.51

(1) The average rate of exchange on the last business day of each month during the year.

(2) Based on the noon buying rate in New York City for cable transfers as certified for customs purposes by the Federal Reserve Bank of New York.

(3) Based on the interbank rate between rands and US dollars as reported by OANDA Corporation.

The following table sets forth, for the months indicated, average, high and low data as reported by OANDA Corporation.

Exchange Rate Information for the Months of	High	Low	Average⁽¹⁾
March 2010	7.71	7.21	7.45
April 2010	7.52	7.17	7.36
May 2010	8.08	7.29	7.65
June 2010	7.85	7.39	7.67
July 2010	7.78	7.26	7.58
August 2010	7.42	7.15	7.32
September 2010 (through September 13, 2010)	7.43	7.13	7.26

(1) The average rate of all ask prices during the month (or portion thereof).

Table of Contents**CAPITALIZATION**

The following table sets forth our consolidated capitalization at July 31, 2010, unless otherwise stated, on:

an actual basis;

as adjusted to give effect to the sale of the ordinary shares offered hereby (assuming no exercise of the underwriters' over-allotment option); and

as adjusted to give effect to (i) the issue of the ordinary shares offered hereby (assuming no exercise of the underwriters' over-allotment option) and (ii) the concurrent sale of the Mandatory Convertible Bonds in the Mandatory Convertible Bonds Offering (assuming no exercise of the over-allotment option by the underwriters of that offering).

This table does not reflect the application of the net proceeds of the issue of ordinary shares offered hereby or the Mandatory Convertible Bonds Offering for the purposes described in "Use of Proceeds". You should read this table together with our US GAAP financial statements and related discussion and analysis included in our 2009 US GAAP Results Release and our 2010 Second Quarter Report.

	As at July 31, 2010 (Unaudited)	As adjusted for the offering (Unaudited) (In \$ millions)	As adjusted for the offering and concurrent Mandatory Convertible Bonds Offering (Unaudited)

- (1) As at July 31, 2010, 98% of our total debt was denominated in US dollars and 2% in South African rands. For a discussion regarding our secured and unsecured indebtedness, see Management's Discussion and Analysis of Financial Condition and Results of Operations included in our 2009 US GAAP Results Release. As at July 31, 2010, secured and unsecured debt accounted for approximately \$54 million and \$1,648 million, respectively, of total debt.
- (2) As at July 31, 2010, up to 15,384,615 of our ADSs (representing up to 15,384,615 of our ordinary shares) were issuable upon conversion of \$732,500,000 principal amount of guaranteed convertible bonds issued by AngloGold Ashanti Holdings Finance plc. As at July 31, 2010, up to 6,901,317 of our ordinary shares were issuable upon exercise of options over our ordinary shares currently outstanding (including 1,228,179 fully-vested options).
- (3) As at June 30, 2010.

There has been no material change in our consolidated capitalization or indebtedness since July 31, 2010.

TAXATION

South African Taxation

The following discussion summarizes South African tax consequences of ownership and disposition of shares or ADSs by a US holder (as defined below). This summary is based upon current South African tax law and South African Revenue Service practice, the convention between the Government of the United States of America and the Republic of South Africa for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and capital gains, signed February 17, 1997, or the Treaty, and in part upon representations of the depositary, and assumes that each obligation provided for in, or otherwise contemplated by, the deposit agreement and any related agreement will be performed in accordance with its respective terms.

The following summary of South African tax considerations does not address the tax consequences to a US holder that is resident in South Africa for South African tax purposes, whose holding of shares or ADSs is effectively connected with a permanent establishment in South Africa through which such US holder carries on business activities or, in the case of an individual who performs independent personal services, with a fixed base situated therein, or who is otherwise not entitled to full benefits under the Treaty.

The statements of law set forth below are subject to any changes (which may be applied retroactively) in South African law or in the interpretation thereof by the South African tax authorities, or in the Treaty, occurring after the date hereof. It should be expressly noted that South African tax law does not specifically address the treatment of ADSs. However, it is reasonable to assume (although no assurance can be made) that the tax treatment of US holders of shares is also applicable to US holders of ADSs.

Holders are strongly urged to consult their own tax advisors as to the consequences under South African, US federal, state and local, and other applicable laws, of the ownership and disposition of shares or ADSs.

Taxation of dividends

South Africa imposes a corporate tax known as Secondary Tax on Companies, or STC, on the distribution of earnings in the form of dividends. Under the terms of an option granted to gold mining corporations, we have elected not to be subject to STC. As a result, although our dividend payments are not subject to STC, we pay corporate income tax at a slightly higher rate than would otherwise have been the case. This election resulted in the overall tax paid by us being lower than the tax payable using the standard corporate tax rate together with STC.

South Africa does not currently impose any withholding tax or any other form of tax on dividends paid to US holders with respect to shares, but there has been a recent announcement (as set out below) that this could change with the introduction of a proposed withholding tax on dividends.

On February 21, 2007, the then-South African Minister of Finance, Mr. Trevor Manuel, delivered his 2007 Budget Speech in which he stated that the STC currently levied at 10% will be replaced by a 10% withholding tax that will be levied on shareholders in respect of dividends distributed by South African companies. The second draft of the legislation giving effect to this withholding tax on dividends was finalized in 2009 but a commencement date has not been announced. If and when this provision comes into effect, it will reduce the tax payable by our South African operations thereby increasing distributable earnings of these operations, but the withholding tax will generally reduce the amount of dividends or other distributions received by our shareholders.

In the case of a South African withholding tax on dividends paid to a US holder with respect to shares or ADSs, the Treaty limits the rate of this tax to 5% of the gross amount of the dividends if a

S-45

Table of Contents

US holder is a company that holds directly at least 10% of our voting stock and 15% of the gross amount of the dividends in all other cases. The above provisions shall not apply if the beneficial owner of the dividends is a US resident who carries on business in South Africa through a permanent establishment situated in South Africa, or performs in South Africa independent personal services from a fixed base situated in South Africa, and the dividends are attributable to such permanent establishment or fixed base.

Taxation of gains on sale or other disposition

South Africa imposes a tax on capital gains, which applies mainly to South African residents and only to a limited extent to non-residents. The meaning of the word "residents" is different for individuals and corporations and is governed by the South African Income Tax Act of 1962 and by the Treaty. Gains on the disposal of securities which are not capital in nature are usually subject to income tax. In either case, a US holder will not be subject to South African tax on the disposal of shares or ADSs unless the US holder carries on business in South Africa through a permanent establishment situated therein to which the shares or ADSs are attributable.

Securities Transfer Tax (STT)

The change of beneficial ownership of shares listed on an exchange in South Africa is subject to STT at the rate of 0.25% of the taxable amount of the shares. Any change of beneficial ownership of shares listed on an exchange outside South Africa and/or the transfer of ADSs is not subject to STT or to any other South African tax. Where a change in beneficial ownership on a purchase of shares listed on an exchange in South Africa:

takes place through a stockbroker, STT will be payable on the actual consideration; and

takes place off market (where either the change in beneficial ownership is effected by the CSDP or the seller continues to hold the shares as nominee on behalf of the purchaser) and the consideration for the shares is less than the lowest traded price of the shares on the date of the relevant transaction, STT is payable on the closing traded price of the shares.

United States Federal Income Taxation

The following is a general summary of the material US federal income tax consequences of the ownership and disposition of shares or ADSs to a US holder (as defined below) that holds its shares or ADSs as a capital asset. This summary is based on US tax laws, including the Internal Revenue Code of 1986, as amended, or the Code, final and proposed Treasury regulations promulgated thereunder, rulings, judicial decisions, administrative pronouncements, and the Treaty, all at the date of this prospectus supplement, and all of which are subject to change or changes in interpretation, possibly with retroactive effect. In addition, this summary is based in part upon the representations of the depositary and the assumption that each obligation in the deposit agreement relating to the ADSs and any related agreement will be performed in accordance with its terms.

This summary does not address all aspects of US federal income taxation that may apply to holders that are subject to special tax rules, including certain US expatriates, insurance companies, tax-exempt entities, certain financial institutions, persons subject to the alternative minimum tax, regulated investment companies, securities broker-dealers, traders in securities who elect to apply a mark-to-market method of accounting, investors that own (directly or indirectly) 10% or more of our outstanding share capital or voting stock, partnerships, persons holding their shares or ADSs as part of a straddle, hedging or conversion transaction, or persons whose functional currency is not the US dollar. Such holders may be subject to US federal income tax consequences different from those set forth below.

Table of Contents

As used herein, the term "US holder" means a beneficial owner of shares or ADSs that is (a) a citizen or individual resident of the United States for US federal income tax purposes; (b) a corporation (or other entity taxable as a corporation for US federal income tax purposes) created or organized in or under the laws of the United States or any state thereof (including the District of Columbia); (c) an estate, the income of which is subject to US federal income taxation regardless of its source; or (d) a trust if a court within the United States can exercise primary supervision over the administration of the trust and one or more US persons are authorized to control all substantial decisions of the trust. If a partnership (including for this purpose, any entity treated as a partnership for US federal income tax purposes) holds shares or ADSs, the tax treatment of a partner generally will depend upon the status of the partner and the activities of the partnership. If a US holder is a partner in a partnership that holds shares or ADSs, the partnership and its partners are urged to consult their own tax advisors regarding the specific tax consequences of the ownership and disposition of the shares or ADSs.

US holders should consult their own tax advisors regarding the specific South African and US federal, state and local tax consequences of owning and disposing of shares or ADSs in light of their particular circumstances as well as any consequences arising under the laws of any other taxing jurisdiction. In particular, US holders are urged to consult their own tax advisors regarding whether they are eligible for benefits under the Treaty.

For US federal income tax purposes, a US holder of ADSs should be treated as owning the underlying shares represented by those ADSs. Therefore, deposits or withdrawals by a US holder of shares for ADSs or of ADSs for shares should not be subject to US federal income tax. The following discussion (except where otherwise expressly noted) applies equally to US holders of shares and US holders of ADSs.

This discussion assumes that we are not, and will not become, a passive foreign investment company (a "PFIC") for US federal income tax purposes, as described below.

Taxation of dividends

The gross amount of any distribution (including the amount of South African withholding tax (if any) thereon) paid to a US holder by us generally will be taxable as dividend income to the US holder for US federal income tax purposes on the date the distribution is actually or constructively received by the US holder, in the case of shares, or by the depository, in the case of ADSs. Corporate US holders will not be eligible for the dividends-received deduction in respect of dividends paid by us. For foreign tax credit limitation purposes, dividends paid by us will be income from sources outside the United States. At present, South Africa does not impose a withholding tax or any other form of tax on dividends paid to US holders with respect to shares. The South African government, however, has announced its intent to impose a 10% dividend withholding tax. See "Taxation - South African Taxation - Taxation of dividends".

The amount of any distribution paid in foreign currency (including the amount of South African withholding tax (if any) thereon) generally will be includible in the gross income of a US holder in an amount equal to the US dollar value of the foreign currency calculated by reference to the spot rate in effect on the date of receipt by the US holder, in the case of shares, or by the depository, in the case of ADSs, regardless of whether the foreign currency is converted into US dollars on such date. If the foreign currency is converted into US dollars on the date of receipt, a US holder generally should not be required to recognize foreign currency gain or loss in respect of the dividend. If the foreign currency received is not converted into US dollars on the date of receipt, a US holder generally will have a tax basis in the foreign currency equal to its US dollar value on the date of receipt. Any gain or loss recognized upon a subsequent conversion or other disposition of the foreign currency generally will be treated as US source ordinary income or loss. In the case of a US holder of ADSs, the amount of any distribution paid in a foreign currency generally will be converted into US dollars by the

Table of Contents

depository upon its receipt. Accordingly, a US holder of ADSs generally will not be required to recognize foreign currency gain or loss in respect of the distribution.

Subject to certain limitations, South African withholding taxes (if any) generally will be treated as foreign taxes eligible for credit against a US holder's US federal income tax liability. The limitation on foreign taxes eligible for credit is calculated separately with respect to specific classes of income. Dividend income generally will constitute passive category income, or in the case of certain US holders, general category income. The use of foreign tax credits is subject to complex conditions and limitations. In lieu of a credit, a US holder who itemizes deductions may elect to deduct all of such holder's foreign taxes in the taxable year. A deduction does not reduce US tax on a dollar-for-dollar basis like a tax credit, but the deduction for foreign taxes is not subject to the same limitations applicable to foreign tax credits. US holders are urged to consult their own tax advisors regarding the availability of foreign tax credits.

Certain non-corporate US holders (including individuals) are eligible for reduced rates of US federal income tax (currently a maximum of 15%) in respect of qualified dividend income received in taxable years beginning before January 1, 2011. For this purpose, qualified dividend income generally includes dividends paid by a non-US corporation if, among other things, the US holders meet certain minimum holding period and other requirements and the non-US corporation satisfies certain requirements, including that the corporation is not a PFIC and either that (i) the ordinary shares (or ADSs) with respect to which the dividend has been paid are readily tradable on an established securities market in the United States, or (ii) the non-US corporation is eligible for the benefits of a comprehensive US income tax treaty (such as the Treaty) which provides for the exchange of information. We believe that dividends paid with respect to our shares and ADSs in tax years beginning prior to January 1, 2011 should constitute qualified dividend income for US federal income tax purposes. We anticipate that such dividends will be reported as qualified dividends on Forms 1099-DIV delivered to US holders. Each individual US holder of our shares or ADSs is urged to consult his own tax advisor regarding the availability to him of the reduced dividend tax rate in light of his own particular situation.

The US Treasury has expressed concern that parties to whom depository shares are pre-released and intermediaries in the chain of ownership between holders and the issuer of the securities underlying depository shares may be taking actions that are inconsistent with the claiming of foreign tax credits for US holders of depository shares. Such actions would also be inconsistent with the claiming of the reduced rate of tax described above, applicable to dividends received by certain non-corporate holders. Accordingly, the analysis of the creditability of South African withholding taxes or the availability of qualified dividend treatment could be affected by future actions that may be taken by such parties.

Taxation of capital gains

In general, upon a sale, exchange or other disposition of shares or ADSs, a US holder will recognize capital gain or loss for US federal income tax purposes in an amount equal to the difference between the US dollar value of the amount realized on the disposition and the holder's tax basis, determined in US dollars, in the shares or ADSs. Such gain or loss generally will be US source gain or loss, and will be treated as a long-term capital gain or loss if the holder's holding period in the shares or ADSs exceeds one year at the time of disposition. If the US holder is an individual, any capital gain generally will be subject to US federal income tax at preferential rates if specified minimum holding periods are met. The deductibility of capital losses is subject to significant limitations.

A US holder's tax basis in a share will generally be its US dollar cost. The US dollar cost of a share purchased with foreign currency will generally be the US dollar value of the purchase price on the date of purchase, or the settlement date for the purchase in case of shares traded on an established securities market that are purchased by a cash basis US holder or an electing accrual basis US holder. The amount realized on a sale or other disposition of shares for an amount in foreign currency will be the US dollar value of this amount on the date of sale or disposition. On the

settlement date, the US

S-48

Table of Contents

holder will recognize US source foreign currency gain or loss (taxable as ordinary income or loss) equal to the difference (if any) between the US dollar value of the amount received based on the exchange rates in effect on the date of sale or other disposition and the settlement date. However, in the case of shares traded on an established securities market that are sold by a cash basis US holder (or an accrual basis US holder that so elects), the amount realized will be based on the exchange rate in effect on the settlement date for the sale, and no exchange gain or loss will be recognized at that time. If an accrual basis US holder makes either of the elections described above, it must be applied consistently from year to year and cannot be revoked without the consent of the IRS.

Foreign currency received on the sale or other disposition of a share will have a tax basis equal to its US dollar value on the settlement date. Any gain or loss recognized on a sale or other disposition of foreign currency (including its use to purchase shares or upon exchange for US dollars) will be US source ordinary income or loss.

Passive foreign investment company considerations

A non-US corporation will be classified a PFIC for any taxable year if at least 75% of its gross income consists of passive income (such as dividends, interest, rents or royalties (other than rents or royalties derived in the active conduct of a trade or business and received from an unrelated person), certain commodities income, or gains on the disposition of certain minority interests), or at least 50% of the average value of its assets consists of assets that produce, or are held for the production of, passive income. We believe that we will not be a PFIC for the taxable year ending December 31, 2010 and do not expect to become a PFIC in the foreseeable future. If we were a PFIC for any taxable year, a US holder would suffer adverse tax consequences.

These consequences may include having gains realized on the disposition of shares or ADSs treated as ordinary income rather than capital gains and being subject to punitive interest charges on the receipt of certain dividends and on the proceeds of the sale or other disposition of the shares or ADSs. Furthermore, dividends paid by us would not be qualified dividend income and would be taxed at the higher rates applicable to other items of ordinary income. US holders should consult their own tax advisors regarding the potential application of the PFIC rules to their ownership of the shares or ADSs.

US information reporting and backup withholding

Dividend payments made to a holder and proceeds paid from the sale, exchange, or other disposition of shares or ADSs may be subject to information reporting to the Internal Revenue Service (the IRS). US federal backup withholding generally is imposed at a current rate of 28% on specified payments to persons who fail to furnish required information. Backup withholding will not apply to a US holder who furnishes a correct taxpayer identification number and makes any other required certification, or who is otherwise exempt from backup withholding. US persons who are required to establish their exempt status generally must provide IRS Form W-9 (Request for Taxpayer Identification Number and Certification).

Backup withholding is not an additional tax. Amounts withheld as backup withholding may be credited against a holder's US federal income tax liability. A holder may obtain a refund of any excess amounts withheld under the backup withholding rules by timely filing the appropriate claim for refund with the IRS and furnishing any required information.

Table of Contents**UNDERWRITING/CONFLICTS OF INTEREST**

We and the underwriters for the offering named below, for whom UBS AG (London Branch) and Morgan Stanley & Co. Incorporated are acting as representatives, have entered into an underwriting agreement with respect to the ordinary shares (in the form of ordinary shares or ADSs) being offered. Subject to certain conditions, each underwriter has severally agreed to procure purchasers for or, failing that, purchase the number of ordinary shares (whether in the form of ordinary shares or ADSs) indicated in the table below. UBS AG (London Branch) may be contacted at 1 Finsbury Avenue, London EC2M 2PP, United Kingdom. Morgan Stanley & Co. Incorporated may be contacted at 1585 Broadway, New York, NY 10036, United States of America.

Underwriters	Number of ordinary shares
UBS AG (London Branch)	6,703,913
Morgan Stanley & Co. Incorporated	6,703,913
Citigroup Global Markets Limited	1,183,044
Deutsche Bank AG, London Branch	1,183,044
Total	15,773,914

The underwriters are committed to take and pay for all of the ordinary shares being offered, if any are taken, other than the additional ordinary shares covered by the option described below and until such option is exercised. The underwriting agreement provides that the obligation of the underwriters to procure purchasers for, or, failing that, purchase themselves, the ordinary shares being offered is subject to approval of legal matters by counsel and to other conditions.

The underwriters have the option to procure purchasers for or, failing that, purchase up to an additional 2,366,086 ordinary shares (whether in the form of ordinary shares or ADSs) from us solely in respect of over-allotments on the same terms as the initial ordinary shares (the over-allotment option). The underwriters may exercise the over-allotment option for 30 days following the date of this prospectus supplement. To the extent that the over-allotment option is exercised, each underwriter will become severally obligated to procure purchasers for, or, failing that, to purchase themselves, approximately the same proportion of such additional ordinary shares as the number set forth next to such underwriter's name in the table above bears to the total number of ordinary shares set forth in such table.

The following table shows the per ordinary share and total underwriting discounts, commissions and fees to be paid by us to the underwriters pursuant to the underwriting agreement.

Per ordinary share ⁽¹⁾	\$ 0.87
Total	\$ 13,723,305

(1) Assuming all ordinary shares offered hereby are sold in the form of ADSs.

The total underwriting discounts and commissions to be paid by us to the underwriters represents 2.00% of the proceeds of the offer, before any other fees and expenses. UBS AG (London Branch) is acting as financial advisor to us in connection with this offering and we have agreed to pay them a fee of \$1.5 million for these services.

Ordinary shares sold by the underwriters to purchasers procured by the underwriters or otherwise to the public will initially be offered at the initial price to investors set forth on the cover of this prospectus supplement. If all the ordinary shares are not sold at the initial price to the purchasers procured by the underwriters or otherwise to the public, the underwriters may change the offering price and the other selling terms in respect of sales to investors for its account.

Table of Contents

We have agreed to pay all fees and expenses in connection with this offering. Set forth below is an itemization of the estimated total fees and expenses, excluding underwriting discounts and commissions, that are expected to be incurred in connection with the offer and sale of the ordinary shares by us.

SEC registration fee	\$ 60,000
JSE Limited listing and inspection fees	\$ 40,000
Printing and engraving costs	\$ 100,000
Legal fees and expenses	\$ 1,200,000
Insurance and other expenses	\$ 1,900,000
Accounting fees and expenses	\$ 200,000
 Total	 \$ 3,500,000

The underwriters may reimburse a portion of our offering related expenses.

The underwriters expect that delivery of the ordinary shares (including in the form of ADSs) will be made against payment therefore on the settlement date specified on the cover page of this prospectus supplement, which will be the fifth business day following the pricing date of the offering (this settlement cycle being referred to as T+5). Under Rule 15c6-1 under the Securities and Exchange Act of 1934, as amended, trades in the secondary market generally are required to settle in three business days, unless the parties to any such trade expressly agree otherwise. Accordingly, purchasers who wish to trade ordinary shares (including in the form of ADSs) on the pricing date or the immediately following business day will be required, by virtue of the fact that the ordinary shares (including in the form of ADSs) initially will settle on a delayed basis, to agree to a delayed settlement cycle at the time of any such trade to prevent a failed settlement and should consult their own advisors.

We have been advised by the underwriters that the underwriters are expected to make offers and sales both inside and outside the United States through their respective selling agents. UBS AG (London Branch) expects to make offers and sales in the United States through its registered broker-dealer affiliate, UBS Securities LLC. Citigroup Global Markets Limited expects to make offers and sales in the United States through its registered broker-dealer affiliate, Citigroup Global Markets Inc. Deutsche Bank AG, London Branch expects to make offers and sales in the United States through its registered broker-dealer affiliate, Deutsche Bank Securities, Inc.

A prospectus supplement in electronic format may be made available on the Internet sites maintained by one or more underwriters or securities dealers.

We have agreed with the underwriters that, for a period of 90 days from the date of this prospectus supplement, we will not, without the prior written consent of the representatives, (a) offer, sell, contract to sell, pledge, grant any option to purchase, make any short sale or dispose of any of our ordinary shares or any of our securities that are substantially similar to our ordinary shares, including but not limited to any options or warrants to purchase our ordinary shares or any securities that are convertible into or exchangeable for, or that represent the right to receive, our ordinary shares or any such substantially similar securities, or (b) enter into any swap or any other agreement or transaction that transfers to another, in whole or in part, directly or indirectly, any of the economic consequences of ownership of our ordinary shares or any of our securities that are substantially similar to our ordinary shares, whether any such swap or transaction described in (a) or (b) above is to be settled by delivery of our ordinary shares or any such substantially similar securities, in cash or otherwise. The foregoing sentence shall not apply to (i) the ordinary shares in this offering, (ii) our issuance and sale of ordinary shares or any such substantially similar securities pursuant to any employee option, bonus, profit sharing, pension, retirement, incentive, savings or similar agreement, plan or

award in effect as of the date of this prospectus supplement, (iii) the issuance by us of

S-51

Table of Contents

ordinary shares or any such substantially similar securities issuable upon the conversion or exchange of convertible or exchangeable securities outstanding as of the date of this prospectus supplement, (iv) the issuance by us of ordinary shares or any such substantially similar securities in consideration for the shares or assets of a company as part of a merger, acquisition, corporate reorganization or similar transaction provided that the recipients of such ordinary shares or any such substantially similar securities agree to be subject to the foregoing sentence and (v) the issuance by us of ordinary shares or any such substantially similar securities issuable upon conversion of the Mandatory Convertible Bonds. The representatives in their sole discretion may release any of the securities subject to this lock-up agreement at any time without notice and, specifically in the circumstances described in part (iv) of the foregoing sentence where such recipients do not agree to be subject to this lock-up agreement, will not unreasonably withhold their release of the lock-up.

We have agreed to indemnify the underwriters against certain liabilities, including liabilities under the Securities Act, or to contribute to payments the underwriters may be required to make because of any of those liabilities.

In connection with the offering, the underwriters may purchase and sell ordinary shares in the open market. These transactions may include short sales, stabilizing transactions and purchases to cover positions created by short sales. Short sales involve the sale by the underwriters of a greater number of ordinary shares than they are required to purchase in the offering. A short sale is covered if the short position is no greater than the number of ordinary shares available for purchase by the underwriters under the over-allotment option. The underwriters may close out any short position by exercising the over-allotment option or purchasing ordinary shares in the open market. In determining the source of ordinary shares to close out a covered short sale, the underwriters will consider, among other things, the open market price of ordinary shares compared to the price available under the over-allotment option. The underwriters may also sell ordinary shares in excess of the over-allotment option, creating a naked short position. The underwriters must close out any naked short position by purchasing ordinary shares in the open market. A naked position is more likely to be created if the underwriters are concerned that there may be downward pressure on the price of the common stock in the open market after pricing that could adversely affect investors who purchase in the offering. Stabilizing transactions consist of various bids for or purchases of ordinary shares made by the underwriters in the open market prior to the completion of the offering.

Purchases to cover a short position or naked position and stabilizing transactions may have the effect of preventing or retarding a decline in the market price of our ordinary shares and may stabilize, maintain or otherwise affect the market price of our ordinary shares. As a result, the price of our ordinary shares may be higher than the price that otherwise might exist in the open market. If these activities are commenced, they may be discontinued at any time. These transactions may be effected on the New York Stock Exchange and the JSE Limited, in the over-the-counter market or otherwise. In this and the immediately above paragraph, references to ordinary shares includes ordinary shares and ordinary shares in the form of ADSs.

The underwriters and their respective affiliates are full service financial institutions engaged in various activities, which may include securities trading, commercial and investment banking, financial advisory, investment management, principal investment, hedging, financing and brokerage activities. Certain of the underwriters and their affiliates have, from time to time, performed, and may in the future perform, various financial advisory and investment banking services for us and/or our affiliates, for which they received or will receive customary fees and expenses. In addition, the underwriters or their respective affiliates are lenders to us and certain of our affiliates under our credit facilities and have, from time to time, entered into hedging transactions with us and certain of our affiliates (including hedge transactions that may be subject of the hedge book reduction described in Prospectus Supplement Summary Hedge Book Reduction and Use of Proceeds).

In the ordinary course of their various business activities, the underwriters and their respective affiliates may make or hold a broad array of investments and actively trade debt and equity securities

Table of Contents

(or related derivative securities) and financial instruments (including bank loans) for their own account and for the accounts of their customers and may at any time hold long and short positions in such securities and instruments. Such investment and securities activities may involve securities and instruments of AngloGold Ashanti Limited or its affiliates.

Conflicts of Interest

As described in *Use of Proceeds*, the net proceeds from this offering, together with certain other funds, will be used to effectively eliminate our gold hedging position, as described under *Prospectus Supplement Summary Hedge Book Reduction*. Because more than 5% of the net proceeds from this offering, not including underwriting compensation, may be received by an underwriter of this offering or its affiliates, this offering is being conducted in compliance with NASD Rule 2720, as administered by FINRA. Pursuant to that rule, the appointment of a qualified independent underwriter is not necessary in connection with this offering, as this offering is of securities for which there are respective bona fide public markets.

Selling Restrictions

No action may be taken in any jurisdiction other than the United States that would permit a public offering of the ordinary shares or the possession, circulation or distribution of this prospectus supplement in any jurisdiction where action for that purpose is required. Accordingly, the ordinary shares may not be offered or sold, directly or indirectly, and neither this prospectus supplement nor any other offering material or advertisements in connection with the ordinary shares may be distributed or published in or from any country or jurisdiction except under circumstances that will result in compliance with any applicable rules and regulations of any such country or jurisdiction.

United Kingdom

Each of the underwriters has represented and agreed that:

(a) it has only communicated or caused to be communicated, and will only communicate or cause to be communicated, an invitation or inducement to engage in investment activity (within the meaning of section 21 of the Financial Services and Markets Act 2000 (FSMA)) to persons who (i) have professional experience in matters relating to investments falling within Article 19(5) of the United Kingdom Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (as amended), (the Financial Promotion Order) (ii) are persons falling within Article 49(2)(a) to (d) of the Financial Promotion Order, being, among other things, high net worth companies and/or unincorporated associations, (iii) are outside the United Kingdom, or (iv) are persons to whom an invitation or inducement to engage in investment activity (within the meaning of section 21 of the United Kingdom Financial Services and Markets Act 2000 (as amended) (the FSMA)) in connection with the issue or sale of any securities may otherwise lawfully be communicated or caused to be communicated (all such persons together being referred to as *relevant persons*); and

(b) it has complied with, and will comply with, all applicable provisions of the FSMA with respect to anything done by it in relation to the ordinary shares in, from or otherwise involving the United Kingdom.

This prospectus supplement is directed only at *relevant persons* and must not be acted on or relied on by persons who are not *relevant persons*. Any investment or investment activity to which this prospectus supplement relates is available only to *relevant persons* and will be engaged in only with *relevant persons*.

Table of Contents

European Economic Area Member States

In relation to each Member State of the EEA which has implemented the Prospectus Directive (each, a Relevant Member State), an offer to the public of any ordinary shares may not be made in that Relevant Member State except that an offer to the public in that Relevant Member State of any ordinary shares may be made at any time under the following exemptions under the Prospectus Directive, if they have been implemented in that Relevant Member State:

- (a) to legal entities which are authorized or regulated to operate in the financial markets or, if not so authorized or regulated, whose corporate purpose is solely to invest in securities;
- (b) to any legal entity which has two or more of (1) an average of at least 250 employees during the last financial year; (2) a total balance sheet of more than 43,000,000 and (3) an annual net turnover of more than 50,000,000 as shown in its last annual or consolidated accounts;
- (c) to fewer than 100 natural or legal persons (other than qualified investors as defined in the Prospectus Directive) subject to obtaining the prior consent of the representatives of any such offering; or
- (d) in any other circumstances which do not require the publication by the Issuer of a prospectus pursuant to Article 3 of the Prospectus Directive.

For the purposes of this provision, the expression an offer of ordinary shares to the public in relation to any ordinary shares in any Relevant Member State means the communication in any form and by any means of sufficient information on the terms of the offer and the ordinary shares to be offered so as to enable an investor to decide to purchase or subscribe for the ordinary shares, as the same may be varied in that Relevant Member State by any measure implementing the Prospectus Directive in that Relevant Member State and the expression Prospectus Directive means Directive 2003/71/EC and includes any relevant implementing measure in each Relevant Member State.

Hong Kong

The ordinary shares may not be offered or sold by means of any document, other than (i) in circumstances which do not constitute an offer to the public within the meaning of the Companies Ordinance (Cap. 32, Laws of Hong Kong), (ii) to professional investors within the meaning of the Securities and Futures Ordinance (Cap. 571, Laws of Hong Kong) and any rules made thereunder or (iii) in other circumstances which do not result in the document being a prospectus within the meaning of the Companies Ordinance (Cap. 32, Laws of Hong Kong), and no advertisement, invitation or document relating to the ordinary shares may be issued or may be in the possession of any person for the purpose of issue (in each case whether in Hong Kong or elsewhere), which is directed at, or the contents of which are likely to be accessed or read by, the public in Hong Kong (except if permitted to do so under the laws of Hong Kong) other than with respect to ordinary shares which are or are intended to be disposed of only to persons outside Hong Kong or only to professional investors within the meaning of the Securities and Futures Ordinance (Cap. 571, Laws of Hong Kong) and any rules made thereunder.

Singapore

This prospectus supplement has not been registered as a prospectus with the Monetary Authority of Singapore. Accordingly, this prospectus supplement and any other document or material in connection with the offer or sale, or invitation for subscription or purchase, of the ordinary shares may not be circulated or distributed nor may the ordinary share be offered or sold, or be made the subject of an invitation for subscription or purchase, whether directly or indirectly, to persons in Singapore other than: (i) to an institutional investor under Section 274 of the Securities and

Futures Act,

S-54

Table of Contents

Chapter 289 of Singapore (the SFA), (ii) to a relevant person, or any person pursuant to Section 275(1A), and in accordance with the conditions, specified in Section 275 of the SFA or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA.

Where the ordinary shares are subscribed or purchased under Section 275 by a relevant person which is: (a) a corporation (which is not an accredited investor) the sole business of which is to hold investments and the entire share capital of which is owned by one or more individuals, each of whom is an accredited investor; or (b) a trust (where the trustee is not an accredited investor) whose sole purpose is to hold investments and each beneficiary of which is an accredited investor, shares, debentures and units of shares and debentures of that corporation or the beneficiaries' rights and interest in that trust shall not be transferable for six months after that corporation or that trust has acquired the ordinary shares under Section 275 except: (1) to an institutional investor under Section 274 of the SFA or to a relevant person, or any person pursuant to Section 275(1A), and in accordance with the conditions, specified in Section 275 of the SFA; (2) where no consideration is given for the transfer; or (3) by operation of law.

Japan

The ordinary shares have not been and will not be registered under the Securities and Exchange Law of Japan (the Securities and Exchange Law) and each underwriter has agreed that it will not offer or sell any securities, directly or indirectly, in Japan or to, or for the benefit of, any resident of Japan (which term as used herein means any person resident in Japan, including any corporation or other entity organized under the laws of Japan), or to others for re-offering or resale, directly or indirectly, in Japan or to a resident of Japan, except pursuant to an exemption from the registration requirements of, and otherwise in compliance with, the Securities and Exchange Law and any other applicable laws, regulations and ministerial guidelines of Japan.

Australia

This document does not constitute a prospectus or other disclosure document under Part 6D.2 of the Corporations Act 2001 (Cth) (the Corporations Act) and does not include the information required for a disclosure document under the Corporations Act. This document has not been lodged with the Australian Securities and Investments Commission (ASIC) and no steps have been taken to lodge it with ASIC.

Each person who subscribes for ordinary shares agrees that they will not make an offer to sell the ordinary shares in Australia (including an offer which is received by a person in Australia), within 12 months of the issue of the ordinary shares, unless the offer does not require disclosure to investors in accordance with Part 6D.2 of the Corporations Act. Disclosure to investors would not generally be required under Part 6D.2 where:

the shares are offered for sale outside of Australia;

the shares are offered for sale to categories of professional investors referred to in section 708(11) of the Corporations Act; or

the shares are offered to persons who are sophisticated investors that meet the criteria set out in sections 708(8) or 708(10) of the Corporations Act.

Furthermore, each person who subscribes for ordinary shares agrees that they will not take any action (or authorize any action) to convert any ordinary shares into CHESS Depository Interests (which represent interests in ordinary shares) quoted on the Australian Securities Exchange, within 12 months of the issue of the ordinary shares.

Table of Contents

South Africa

Each underwriter has represented and agreed that it has not offered and will not offer the ordinary shares offered by this prospectus to the public in South Africa (as defined in, and in accordance with the terms of, Chapter VI of the South African Companies Act, 1973 (as amended)). Accordingly, such ordinary shares may not be handed on, surrendered to, renounced in favor of or assigned to any person in South Africa in any manner which could be construed as an offer to the public in terms of Chapter VI of the Companies Act, 1973 (as amended). See South African Reserve Bank approval .

New Zealand

This prospectus supplement has not been prepared or registered in accordance with the Securities Act 1978 of New Zealand. Accordingly, each underwriter has represented and agreed that it (i) has not offered or sold, and will not offer or sell, directly or indirectly, ordinary shares and (ii) has not distributed and will not distribute, directly or indirectly, any offer materials or advertisements in relation to any offer of ordinary shares, in each case in New Zealand, other than (a) to persons whose principal business is the investment of money or who, in the course of and for the purpose of their business, habitually invest money or (b) in other circumstances where there is no contravention of the Securities Act 1978 of New Zealand (or any statutory modification or re-enactment, or statutory substitution for, the securities legislation of New Zealand).

Dubai International Financial Centre

This prospectus supplement relates to an Exempt Offer in accordance with the Offered Securities Rules of the Dubai Financial Services Authority (DFSA). This prospectus supplement is intended for distribution only to persons of a type specified in the Offered Securities Rules of the DFSA. It must not be delivered to, or relied on by, any other person. The DFSA has no responsibility for reviewing or verifying any documents in connection with Exempt Offers. The DFSA has not approved this prospectus supplement nor taken steps to verify the information set forth herein and has no responsibility for the prospectus supplement. The ordinary shares to which this prospectus supplement relates may be illiquid and/or subject to restrictions on their resale. Prospective purchasers of the ordinary shares offered should conduct their own due diligence on the ordinary shares. If you do not understand the contents of this prospectus supplement you should consult an authorized financial adviser.

LEGAL MATTERS

Certain legal matters with respect to South African law will be passed upon for us by our South African counsel, Taback & Associates (Pty) Limited. Certain legal matters with respect to United States and New York law will be passed upon for us by Shearman & Sterling (London) LLP, who may rely, without independent investigation, on Taback & Associates (Pty) Limited regarding certain South African legal matters. Certain legal matters with respect to United States and New York law will be passed upon for the underwriters by Davis Polk & Wardwell LLP.

SOUTH AFRICAN RESERVE BANK APPROVAL

We have obtained approval from the South African Reserve Bank for our offering of ordinary shares under this prospectus supplement. In terms of the Exchange Control Regulations of South Africa:

any certificates in respect of our ordinary shares that may be issued to non-residents of South Africa will be endorsed Non-Resident ;

any certificates in respect of our ordinary shares, any dividends we pay and, any other cash payments or distributions we may make in respect of our ordinary shares due to any emigrant from South Africa will be forwarded to the authorized dealer in foreign exchange, in terms of our African Exchange Control Regulations, controlling such emigrant s blocked assets. Such certificates, in respect of our Ordinary Shares will be endorsed Non Resident ; and

all dividends and any other cash payments or distributions we may make in respect of our ordinary shares, other than to emigrants from South Africa referred to above, are freely transferable from South Africa.

EXPERTS

Our financial statements for the years ended December 31, 2007, 2008 and 2009 are incorporated by reference in this prospectus supplement in reliance on the report of Ernst & Young Inc., independent registered public accounting firm, given on their authority as experts in accounting and auditing.
