Management Comments

•

"2011 was the best year in our history. It was a third consecutive year of outgrowing the industry, a year in which we crossed the \$100 million revenue mark for the first time, generating a net income of more than \$27 million and increasing our cash by more than \$22 million", said Gabi Seligsohn, President and CEO of Nova. "Fourth quarter revenues were at the high end of our guidance, and profitability exceeded our expectations as a result of a favorable product mix and our success in controlling immediate expenses. In addition, the accounting rules required us to establish a deferred income tax asset as a result of establishing a pattern of profitability, and our fourth quarter net income included a \$2.5 million tax benefit."

"We began to see a pickup in bookings early in the fourth quarter, which accelerated as the quarter progressed and we have continued to see a positive trend in the early part of the first quarter. As a result, we ended the year with a very significant improvement in our backlog compared to the end of the third quarter and have entered 2012 with improved visibility. Looking at the opportunities that lie ahead, we are planning to invest the necessary resources to continue and enable our long term growth trajectories. The focus over the last few years on aggressive product development, operational excellence and strong customer presence is what brought us to where we stand today. This focus will continue into the future as we adapt our strategy to the company size we have become, in order to support our long term growth plans."

"After several years of focusing on new customer penetrations, we are benefitting from repeat orders in stand alone solutions and they accounted for a significant proportion of our business in 2011. During the year, we introduced three new products into the field for which we are also receiving repeat orders from multiple customers, a strong indication that we have executed well on our product road map. Our bookings also indicate that we are well-positioned in the high end technology nodes, with most of the orders focused on 28nm and below and with recent wins including 11nm and 14nm process development activities with leading edge customers".
